## PARTY LINES AND FARM PHONE HOLDERS

The rate war is now on between the business men and the phone company. It will be to your interests to co-operate with and give the business men your support in this matter, and if it comes to a "show-down" to do the same as the business men—order your phones out. A solid front of all phone patrons will win this fight, and assure us better phone service at a fair rate—Let's all stick together—you know the rest.

## An Investment When you spend your money with your home merchant it helps to make a live town—a good live town increases property values That Pays Dividends

### HAVE THEY SEEN THE HAND WRITING ON THE WALL?

At the request of the Northern Indiana Telephone Co., the hearing on the proposed rates increase which was set for Feb. 3, at North Manchester has been postponed to Wednesday Feb. 19th.

We believe that the company officials have received such a large number of letters from business men with such strong objections to the proposed increase that they have decided to delay matters for a time to see if the revolt would not subside. In this they will be sadly disappointed, from the fact that the more the proposition is discussed the more firmly will the people be convinced that the increase is uncalled for and that the rates as they now stand are too high when you consider that the adding of toll to all neighboring exchanges, has practically cut our free service in half. It is our opinion that fully ninety per cent of phone holders have made up their minds that before they will pay an increase they will order their phones out.

Regardless of the fact that the company claims an investment of \$640,000.00, we do not believe that there was more actual money invested than the amount of the bonded indebtedness, which is approximately \$340,000.00. And taking that as about the real valuation of their property according to their own figures published in their recent statement they are now getting better than ten per cent on every dollar that they have actually invested. We believe they would have to look for some time to find a buyer for their property at the valuation that we have placed upon it. Hence it is reasonable to suppose that every business man in this community is of the opinion that the rates as they now stand are too high, and will demand that free toll service be re-established with all neighboring exchanges—also that they devote some of their time to raising the service to a standard equal to that which we were enjoying when they took the local lines over.

A good sample of the way they boosted their holdings can be seen by the valuation that they placed on their building in this village. The business room on the ground floor rents for \$15.00 per month, some living rooms in the rear on the first floor and second floor when rented brings in about \$8.00 per month, and the front rooms on the second floor they use for the phone exchange—their income for rentals aside from the part that they occupy being \$23.00 per month, or a fair return on \$2,300.00. Now on this building they claim a valuation of \$14,000.00. To be sure they get a small income on their \$14,000.00 investment—but never mind about that they will just make it up on your telephone rentals.

Now the Farmers State Bank building, which is much larger building, modern, up-to-date and a corner location, worth probably three times as much as the telephone building, with the most valuable part occupied by the bank and with rental income of double the amount of the phone building is listed in all the bank statements at only \$8,000.00.

We give the above as a fair sample of how the valuations of

the telephone property have been inflated by the rate boosters, and with such facts and figures staring them in the face we do not see how they have the nerve to ask for another increase.

Again we say to the phone users—stand pat—if the increase is granted and they attempt to enforce it, order your phones out. And if the raise is not granted, before you give up the fight demand that free service be re-established with neighboring exchanges the same as it was before taken over by the Northern Ind. Tel. Co.

### CHURCH HAS PUBLIC DUTY

By CANON WILLIAM SHEAFE CHASE, Brooklyn (Episcopal).

If Christ were here now He would do what He did in the temple in Jerusalem. Had Christ not interfered with corrupt politics He would never have been crucified. He openly declared His opinion upon the chief political issue of the day, whether the Jews should pay taxes to the Roman government. He asserted that they should pay the taxes, and thereby antagonized the leaders of the community.

Christ clearly separated church and state, but he asserted His right to rebuke and advise the state. The people tried to make Him king, which they would never have done had He not proved His interest in the moral, social and political welfare of the masses.

In order to demonstrate the unselfishness of the church, and to show that it is willing to lose its life as an institution to save the people from moral degradation as Christ died on the cross, the church must lead in moral practice.

Can anyone who realizes the immorality, robberies, political corruption, murder and graft connected with 32,000 speakeasies in this city imagine that if Christ were here and were asked what He thought about it, that He would refuse to express His convictions because the question was outside the sphere of His activity?

### BRITISH LAXITY IN PALESTINE

By DR. STEPHEN S. WISE, Prominent Zionist.

I would not say that the British government is opposed to the establishment of the Jewish national home in Palestine. However, instead of "facilitating" it, as it is pledged to do, the mandatory power adopts a nonco-operative attitude in relation to the achievement of this object. The Wailing Wall incident is being prolonged into a continuing source of misunderstandings, but the Zionist organization maintains that it cannot bring about the removal of the offending official.

If the minor official is blameless, then the chiefs are guilty, and a strong and adequate leadership would bring to the attention of the British government the violation of the sensibilities of the Jewish builders of Palestine. It is the minor officials in Palestine who harass and will continue to do so until they are reminded that England loves fair play.

# ORCHARD GLEANINGS

## PHONY DISEASE IS CAUSE OF DAMAGE

### Trouble Traced to Virus Found in Tree Roots.

(Prepared by the United States Department  
of Agriculture.)

Recent investigations of phony peach, a disease which threatens to do great damage to the peach industry of Georgia, show that this trouble is caused by a virus that resides in the roots of the trees. The virus does not enter the branches, buds, scions, or seeds and the disease is communicable only by grafting roots from diseased trees to roots of healthy trees, or by making piece-root grafts in which phony roots are used.

The first symptoms of phony disease do not appear in commercial plantings until the latter part of the second growing season, according to specialists of the United States Department of Agriculture who are conducting the investigations. From this time on the trees may come down with the disease at any age.

When attacked by this disease a tree develops shortened internodes, a large number of lateral twigs, and large, flattened dark-green leaves, giving the appearance of dense growth with healthy foliage. Especially in young trees, a decided dwarfing results. The number of fruits and their size is greatly reduced. Fruit from phony trees is apt to be distinctly poorer in flavor than normal fruit, though slightly better in color.

This disease was first observed about 50 years ago by Samuel H. Rumph, a peach grower of Marshallville, Ga. He called the affected trees "ponies" because of their smaller size. Various causes were assigned to this behavior, and finally it came to be regarded as a disease. The term "phony disease" is now generally used to describe this condition.

A vigorous campaign is now being conducted for the eradication of the phony trees. This is regarded as the only sure method of controlling the disease in the territory where it has already spread. In the meantime numerous experiments are under way at present in an effort to find a stock that is resistant to the disease.

### Pruning Bush Fruits at Proper Time in Winter

Gooseberries and currants may be pruned at any time between now and time growth starts in spring, but the preferred time is in very early spring, just before growth starts.

In pruning, keep in mind that the

best crops of fruit are produced on wood two and three years old. This means that when a cane has reached the stage that it does not make at least 3 or 4 inches of new growth on top, there is not going to be much fruit borne on this in another two years. In pruning old plants, take out a goodly per cent of old wood that does not appear thrifty, leaving new sprouts to take the place of that cut out. If the bushes appear too thick, cut the small stuff out entirely. The new sprouts that started last spring will not produce fruit next year, but some the year after, and a better crop the third year. It is the nature of both currants and gooseberries to start a number of new sprouts each spring. It helps greatly in getting larger fruit and better crops, if the surplus of these sprouts are cut out closely, along during the first half of June. In doing this, where there is apparent need of a permanent cane, leave a sprout to take up this place, or to replace an old one that should be removed after fruit is gathered, or in early spring.

It is not at all necessary to replant currants and gooseberries every two or three years. By studying the pruning system, the same plant will produce fine crops of fruits for ten or more years.

### Raking Leaves Controls Scab of Apple Trees

Raking up all dead leaves in the orchard and burning them, followed by a systematic spray program the next spring, was instrumental in producing a superior crop of apples in a Morrow county (Ohio) orchard last year. The owner, upon recommendation of Prof. Wendell Paddock of Ohio State university, gathered the leaves at a cost of about \$100. The previous year the trees, now about twenty years old, had been seriously infected with scab, but last year the orchard produced more than 4,000 bushels of first-class fruit. The owner through advertising in local papers has been able to sell a major portion of the crop at the farm.

### Spring Mulching

Generally, when we speak of mulching strawberries, we think of applying same in late fall or early winter for winter protection, but some of the greatest benefits come from having the mulch on the strawberry bed in the spring, also at harvest time. To obtain these benefits the mulch should be applied any time before the ground thaws out in the spring, applying four or five inches of loose straw, rye preferred, wheat next, free from weed grass, or grain seed.

## YOUNG PEOPLES BANQUET.

On last Wednesday evening about 115 young people from Kewanna, Fulton, Rochester, Bethlehem Church and the Mentone Baptist, enjoyed a banquet at the church here. The Ladies Aid served a sumptuous supper after which a varied program was rendered. Rev. D. G. Dunkin of the Warsaw Baptist Church gave the main address. The Birdland Trio of Talma was another feature of the program as well as a reading by Mrs. Lena Eaton, and selections by the Fulton orchestra.

These banquets are annual "get-togethers" of all young people of the Logansport Association of Baptist churches. Miss Maurine Jefferies of the Bethlehem Baptist Church is president of the organization.

## FULTON COUNTY BASKET BALL TOURNAMENT.

The Fulton County Basket Ball Tournament was held at Rochester, Friday evening and Saturday, January 24 and 25. Both the first and second teams of the Talma High School, entered the tournament. The patrons and friends of the High School have reasons to be proud of the boys as both teams went into the finals on Saturday evening. The Talma seconds clashed with the Akron seconds for the honors and came out victorious, the final score being Talma 24 and Akron 16.

The first team was defeated in the last game of the evening by Fulton, the final score being Fulton 26, Talma 16.

It is needless to say that the boys were loyally supported by many of the members of the High School as well as friends and patrons of the school.

Following is the final score and names of the teams with which Talma played during the tournament.

First team: Saturday 11:00 a. m. Talma 23, Leiters Ford 15. Saturday 3:30 p. m. Talma 21 Akron 20. Saturday 8:30 p. m. Fulton 26 Talma 16.

Second Team: Friday 8:30 p. m. Talma 15 Leiters Ford 7. Saturday 7:30 p. m. Talma 24 Akron 16.

## Wonders of Science

# DAIRY

## TRUST NO BULL, ADVISES HOPPER

### Handle Animal Firmly and Keep Him Subdued.

Any effort to make a pet of a bull is bound to be followed by trouble, says Prof. H. A. Hopper of the New York State College of Agriculture. Confidence in bulls is always misplaced; not one is safe.

According to Professor Hopper the young bull should be firmly handled from calfhood and should be taught to recognize man as his master. He should be halter broken and when about one year old a strong ring should be inserted in his nose. By keeping him in a well-built stall and using only strong, properly fitted ties he can be prevented from learning his tremendous strength. All bulls more than a year old should be regarded with suspicion and taught to know their place.

The horns of a bull may be removed at an early age or late if desired. With the young calf the use of caustic potash before the horns have started growing is the most humane method to follow. Some stockmen prefer to delay the removal until the bull has reached maturity, when the ordeal of removal and the loss of the horns will tend to "take the conceit out of him." While the dehorned bull is still dangerous, much would be gained if all bulls were dehorned early in life.

With proper arrangements of stall and yard, a dehorned bull handled by a staff attached to a ring in his nose should cause no trouble. However, much will depend on his early training and the courage of his caretaker.

Those who wish to know more about the feeding and care of the dairy bull may obtain a free bulletin on the subject by writing to the publications office in Roberts hall, College of Agriculture, Ithaca, New York, and asking for E-614.

## PROMPT IN PAYING.

# FAIRM STOCK

**CLEAN GROUND IS  
BEST FOR SWINE**

**Most Profitable Practice for  
Farmers Anywhere.**

The practice of raising hogs on clean ground and with clean equipment probably has done more to make hog raising profitable for farmers who used it than any other production method. One farmer found that he could produce 100 pounds of pork on 6 bushels of corn and 20 pounds of tankage by raising his pigs on clean ground. His neighbors who had unthrifty pigs found that it required 10 bushels of corn and 30 pounds of tankage in the production of the same weight of pork under the old fashioned system of management.

Thorough cleaning of pens and equipment in the farrowing house, the first step in the McLean county system, can best be done when the equipment is modern, preferably of steel. Scrubbing with plenty of lye water and an application of a good disinfectant afterward lessens the danger of the young pigs picking up round worm eggs and disease germs.

Remodeling and preparation of the hog house can best be done in the summer. Pens can be patched up or rebuilt, damp floors can be plankled to make them warmer and dryer and ventilation systems can be installed in houses which are frosty and unhealthy in winter and in which hogs are subject to "flu" and other respiratory diseases. In some cases it may be necessary to line frame houses inside the studding and rafters with boards or insulating material so that the house can be kept warm and the temperature uniform.

Litter carriers and feed carts save many steps in large hog houses and can be installed with little trouble. Running water piped into the hog house also is a great convenience and a time and labor saver.

After the growing litters are transferred to pasture and housed in individual sheds much of the work of caring for them can be eliminated by the use of self-feeders and automatic waterers.

**Thrifless Colts Often  
Infested With Parasites**

Thrifless colts are often found infested with blood worms, and teething also aggravates the condition. Have the teeth put in order by a veterinarian; then feed whole oats, wheat bran, ear corn, carrots and good mixed clover and timothy hay. If you find a collection of scaly sub-

stances around the anus or see worms in the feces, mix in the dampened feed night and morning for a week two teaspoonfuls of a mixture of two parts of salt and one part each of dried sulphate of iron, tartar emetic and flowers of sulphur; then discontinue the treatment for ten days, and then give it for another week. Clip the hair from the legs above the knees and hocks and from the belly and sides to a line with the straps of a breast collar and breeching.

**Watch Lambs Closely  
When Put in Feedlot**

Western lambs which are to be fattened for market should be watched closely when put into the feedlot. It will take a few days to get them accustomed to new conditions and especially to get them started. Too much grain at the start may result in death of some of the lambs. Until all the lambs become accustomed to grain, only a small amount of concentrates should be supplied as there is the danger that some of the lambs will eat more grain than they can stand. Alfalfa hay is valuable for fattening lambs, but at the start it is safer to give them some prairie hay, straw, or fodder in addition to alfalfa.

oooooooooooooooooooooooooooo  
**Live Stock Hints**  
oooooooooooooooooooooooooooo

Farrowing ralls will reduce losses of baby pigs.

It's hard to make good profits from scrub animals.

Diseases of live stock flourish in dirty places. Clean the premises frequently.

Clover and alfalfa hays are good healthful feeds for all classes of draft horses, but especially for growing foals. The mineral matter contained in legume hays is vital to the well-being of the colts.

Flockmasters should remember that in order to grow a fleece and to nourish a developing lamb, a ewe needs plenty of protein. If not obtained in legume hay, then bran and linseed oil meal must be fed.

With liberal feeding the brood sow will be able to recuperate from suckling her fall litter so that she will be thrifty and vigorous when mated for her next litter. Rations rich in protein and mineral content should prevail prior to mating as well as throughout the gestation period.

**No Figure of Speech**  
When Mexican politicians talk about burying the opposition they mean it.—Dallas News.

**Effulgent**  
The word "Kohinoor" is derived from the Persian Koh-i-nur, meaning literally "mountain of light."

## Horticultural News

**PORTABLE OUTFIT  
PRECOOLS FRUITS**

**Device Easily Carried From  
One Car to Another.**

(Prepared by the United States Department of Agriculture.)

A simple device which enables fruit growers and shippers to convert an ordinary refrigerator car into a "precooling plant" has been perfected by workers of the United States Department of Agriculture. The device weighs only 85 pounds complete and is easily carried from car to car. Its use allows the fruit to be loaded directly in the car from the packing house, thus saving the cost of extra handling incident to a trip to a precooling plant. This arrangement saves time and labor for the growers, and in addition it makes possible the cooling of fruit loaded at many small shipping points where no precooling plant is available.

The portable precooling device consists of a small electric motor and a high-speed blower. When two of these motor-driven blowers are put into operation in the bunkers of an iced and loaded car, the natural circulation of air is reversed. The cold air is pulled up from the ice compartments at each end of the car and blown out over the top of the load, cooling the top layers much faster than they would be cooled with the natural circulation.

The new device has been used for precooling strawberries in North Carolina and Florida and for peaches in Georgia. More recently it has been used with success in precooling citrus fruits in Florida. The portable feature is especially important.

Because of the simple construction of these units the cost of a complete outfit is less than \$250. The cost of operation depends upon the cost of electrical current and the kind of fruit to be cooled, but trials made so far indicate that the total operating cost for precooling a car of strawberries should not exceed \$5.

Assembling of these outfits has been started on a small scale by a commercial concern. However, the device is covered by a public service patent, and anyone who cares to may assemble his own unit.

**Transplant Strawberry  
Plants Early in Spring**

The safest time to transplant strawberry plants is early in the spring, but, if one has plenty of plants at home so that they need not be bought, it is a good plan to do some of the planting in the autumn as, if they

succeed, runners will start earlier next spring and, in 1931, the crop is likely to be greater than from plants set next spring. However, there is always danger of the plants heaving out and being killed when planted in the autumn, hence, if they have to be purchased it is not wise to take the risk. Where plants are grown by the matted row system, it is not possible to mulch the ground with paper as the runners could not root, but where grown in hills the plan is to make a notch in the strip of paper where each plant is to go and after a row is planted lay another strip as close as possible to the row with notches on the far side for the next row of plants. The paper is put down when the plants are set out.

oooooooooooooooooooooooooooo  
**Horticultural Notes**  
oooooooooooooooooooooooooooo

More growers each year find that to thin overloaded trees increases their profits.

Damage to fruit trees by rodents is always heavier in years of heavy snowfall.

Young trees have a present value because timber is going to be needed in the future.

Flavor is the first factor influencing the consumer when buying apples. Color comes second.

Profits depend primarily on yield and secondarily on price, which means: Site, soil, grades, variety and price, in the order named, are the most important factors in apple production.

Prune young peach trees up to three years old only enough to insure a fairly open center, good distribution of main limbs, and a light heading back to outside limbs of leaders making heavy growth.

The University of Minnesota is the owner of a patent on the process for ripening fruits with ethylene gas which was discovered by Dr. R. B. Harvey, University farm.

The orchard which does not produce quantity, even though quality and returns are fair, is unprofitable and sooner or later must quit.

Quantity yield of high quality fruit should be the goal of every apple grower. With fair returns, profits multiply fast as this goal is reached.

**Fighting Gambling**  
From the earliest history of city governments there have been efforts to regulate gambling, but in 1880 in New York the movement to check open gambling became particularly strong and from 1881 1894 many regulations were passed. By 1895 nearly all the chief cities had enacted statutes or laws.

# MENTONE NEWS ITEMS

Clark's Store are taking their annual Inventory.

Charles Carter is sick this week with a severe case of tonsillitis.

Mr. and Mrs. I. F. Snyder were in Fort Wayne Tuesday on business.

The annual crop of stray dogs in the village is a sure sign that the tax assessor is about due.

Miss Bernice Koher, who was taken last Wednesday to the hospital at Rochester, is reported to be improving very slowly.

Don Bunner and Jennings Carter returned to Bloomington University, Sunday after spending a few days here the guests of their parents.

Mr. and Mrs. I. F. Snyder, Mr. and Mrs. C. G. Carter and Mr. and Mrs. D. L. Bunner spent Sunday evening in Warsaw with Mr. and Mrs. G. Harry Oram and family.

Don Bunner slipped away from his studies at Bloomington, Ind., long enough to spend Saturday and Sunday with his parents at this place. Don says that he likes his journalistic work at the University fine, and we have reasons to believe that he will make a success as a pen pusher.

## HE DID NOT SEE HIS SHADOW.

We do not know how it was in other parts of the country but in this locality we are quite sure that the ground hog did not see his shadow on the 2nd. We have discarded our overcoat and believe that this is one of the years that the old wood-chuck is going to be in the right—let's hope so at least.

## POOR JUDGMENT OF A BALL CATCHER.

Gus. Sanberg, catcher for the Los Angeles, Calif., base ball team struck a match to see if the gasoline was all out of the tank in his automobile—you can guess the result. If the victim showed no better judgement on the diamond than he did with the gas tank, the ball club will not miss him much if he never is able to enter the game again.

## TO TAKE A REST IN THE SOUTH LAND.

On Saturday of last week Dr. and Mrs. M. G. Yocum, and Maurice Dudley left by motor for the south land, their destination being somewhere in the vicinity of New Orleans. The doctor is much in need of a rest from his large practice, which has kept him exceptionally busy during the past several months. They expect to be gone for several weeks, during which time they will take in the Mardi Gras carnival at the Crescent City.

# Dies of Heart Failure.

Aurelius Vandermark Succumbs To Sudden Attack Monday Night.

Aurelius Vandermark, a resident of this village for a number of years and well known to our readers passed away sometime during Monday night at his residence in this place. His death was not discovered until morning when his wife went to awake him.

The deceased had been ailing for some time but no one had the slightest idea that the end was so near, and his sudden death was a shock to his family as well as to his many friends. Up to the time of going to press funeral arrangements had not been completed.

## AGED CIVIL WAR VETERAN BURNS TO DEATH IN HOME.

Fletcher E. Marsh, aged 85, a veteran of the civil war burned to death in his home on the south side of Wawasee Lake shortly after one o'clock Sunday morning. The fire was caused by the explosion of an oil stove and by the time that Mrs. Joseph Wilt, his housekeeper was awakened the fire had gained such a headway that it was impossible for her to give any assistance to the victim.

## To Keep The Parole List Secret.

The decision of the trustees of the Indiana state prison to keep the list of paroled prisoners a secret in the future was probably arrived at with good intentions, thinking that by this secrecy the recipient of clemency would stand a better chance to obtain employment. That looks all right on the face of the matter and would probably assist in getting the job but what would be the moral effect upon the man that this secrecy is supposed to benefit? He sure would have a hard time to keep in the straight and narrow path, when down in his heart he knew he was in reality living a lie. No, no matter how good the intentions of the trustees—their plan will work to no advantage to the one whom they seek to help.

# This Week

by Arthur Brisbane  
To Death Barefoot  
A Dwarf Can Kill  
Must Sea Gulls Die?  
Safer Flying

Los Angeles, Calif.—In Orleans, Augustine Agogue, twenty-seven years old, who killed her mother to get the mother's farm, was sentenced to death. In accordance with the Napoleonic code, seeking to humiliate and punish more severely those that murder their parents, Augustine will walk barefoot to the guillotine.

Interesting historical contrast between her death and that of Joan of Arc, the maid of Orleans. One walks to the guillotine barefoot for murdering her mother. The other walked barefoot to the stake, burned alive for saving her country.

In New York a dwarf only four feet high, Peter Arata, is sentenced to death for murder.

The modern "automatic" pistol makes it easy for Peter to kill. In ancient days when men fought with clubs, maces and swords, he would only have been a jester, too small to murder.

Similarly a small nation, as small as Hungary, or Holland, or Switzerland, in these days of flying machines and poison gas might be the most efficient international killer in the murder game of war.

Conditions change. A five pound baby taken up in an airplane might release a poison gas bomb that would kill 500,000 in a big city.

R. G. Fernald, member of California's game commission and owner of the Santa Barbara Morning Press, says sea gulls are the worst enemies of wild ducks and other wild life.

Congress, says he, should authorize and finance extermination of the millions of sea gulls in Alaska. A small bounty and the Esquimaux would kill them off quickly.

Sea gulls destroy the eggs and young of wild ducks in their northern breeding grounds, millions of them. They dive and devour the eggs of the salmon. Adult fish near the spawning grounds are seen floundering aimlessly in shallow water. Easily caught, they are found to be blind, both eyes picked out by gulls not strong enough to lift the heavy salmon.

Congress should do something about that, with two "ifs"—if the gulls can be spared from their work as scavengers for the sake of ducks and salmon;

and if it makes much difference whether gulls have the fun of eating the ducks as babies or men have the fun of shooting them as full-grown ducks.

Mr. Young, assistant secretary of the Department of Commerce, announces that passenger airplanes must carry two-way radio facilities to receive weather information and send emergency messages.

Presently more powerful engines, bigger ships, better understanding of air navigation, will eliminate the importance of weather conditions.

Meanwhile the government, not youthful, enthusiastic pilots, should decide on flying or not flying.

Mr. B. C. Forbes, asking himself "What is this all about, this terrific strenuousness and strain?" as he talked to George F. Baker, richest banker in the world, says of a certain multi-millionaire, not Mr. Baker, that he would "trade all his riches for youth." The multi-millionaire thinks he would do it, but wouldn't.

A man like Edison might desire renewed youth, to live another life of useful invention. But a man who has only made money would be foolish to live his life again.

An intelligent man, after working hard through a lifetime, would not go back to the gate by which we enter, but rather look to the door at the far end of life, as a trained dog in the show years for the moment when he may get down on all fours and trot off the stage.

Old men cling to money that protects them from the rough world. It is the one reality extracted from life's unreal dream.

He who thinks he understands the character and emotions of women deceives himself.

Mrs. Della ("Dot") Lee, manicure lady who lived here, sent \$50 to her sister, writing: "I think something is going to happen. If it does and Howard gets me, bury me in white with yellow roses in my hand. This money will pay for the dress."

Her womanly intuition did not deceive her. Something did happen. Howard, twenty-eight-year-old mechanical engineer, called. She shot him dead as he slept, killed herself and is presumably wearing the white dress, holding the yellow roses.

A lady killing a gentleman, or vice versa, is part of civilization's routine. But why did the lady specify a white dress and yellow roses? No man planning suicide would demand blue serge and purple orchids.

There is something in woman's character more puzzling than a dozen Einstein theories.

## Things That Help

After all, life isn't simply doing things. Thinking things helps also at times.—Detroit Free Press.

## Old Custom Survives

It is still the custom in England to burn the effigy of Guy Fawkes on the fifth of November, Guy Fawkes day.

# DAIRY FACTS

## COOLING MILK BY ELECTRICITY NEW

### Current Is Cheaper Than Ice on Many Dairy Farms.

"The advent of electric refrigeration as a new method of cooling milk has awakened new interest among dairymen in the cost and efficiency of the several methods used to get low temperatures in their cooling vats," said R. F. Bucknam of the New York Agricultural college, in a radio talk. As long as it was a question of another cake of ice from a well-filled ice house, no one worried much about the cost of cooling milk on farms. But when the cost of cooling shows up every month on the bill for electricity, interest in the subject develops rapidly, Mr. Bucknam said.

Although there is considerable variation in the cost of electric equipment and its installation, it may be roughly estimated that the investment will be from \$75 to \$100 for each can capacity.

The amount of current required is easily ascertained. Studies made in Wisconsin show an average requirement of about eight-tenths of a kilowatt hour for each can of milk cooled. This investigation reports studies in large-size dairies where a high efficiency may be expected. Limited investigation in New York shows that the kilowatt hour consumption to a can was somewhat higher. At rates available in most of New York, the cost of actual operation would be about five cents for current and nine cents a can for maintenance of equipment, making a total cost for cooling with electricity of fourteen cents a can, as compared with a cost of sixteen cents by ice cooling as generally figured.

If a farmer has a good ice house, a convenient ice pond, and no serious labor problems, it would probably be cheaper for him to continue with ice, according to Mr. Bucknam. If, on the other hand, it is necessary to build a new ice house, or go to any great expense to repair one, or if labor is a serious problem, the use of electricity should be thoroughly investigated.

## Uses for Licorice

Licorice has not become a successful commercial crop in America. It grows wild over large areas in Spain, Italy, southern Russia, Asia Minor and southern Asia. This country, however, uses quantities of licorice. Ninety per cent of it finds its way into the tobacco industry about 5 per cent into confectionery and about 5 per cent into medicine. Its principal medicinal use is to disguise the taste of acid drugs

The Eastern Stars will entertain their families and the Masons and their families at a pot-luck supper, Wednesday evening, February 12th. Supper at 6:30. Acordial invitation is extended to all Masons in this vicinity.

PIANO RECITAL AT METHODIST CHURCH.

Maude Snyder will present piano students in a very interesting program, Sunday evening, Feb. 9th, at seven thirty. The Public invited.

Knew Her Weakness

Man—I say, you fellows, my wife went off to see her mother, intending to stay six weeks, but I brought her home in a hurry. Do you know what I did? I sent her a paper every day with a paragraph cut out, and she was so full of curiosity to know what news I was keeping from her that she came home at the end of four days.—London Tit-Bits.

# POULTRY FACTS

## FRESH AIR CURES CHICKEN'S COLDS

### Ventilation and Dry Litter Will Prevent Troubles.

Chickens are unlucky in the structure of their heads, for it makes them susceptible to colds. Poultrymen should try to avoid conditions that will bring on colds, says Dr. E. L. Brunett, of the New York State College of Veterinary Medicine at Cornell university.

In the head, in front of the brain cavity, are thin cones of bones located in chambers. The use of these chambers is to provide a space in which the inhaled air is warmed before it is taken into the lungs. When a chicken develops a simple cold, an excessive amount of secretion forms in these cavities. As this increases, the poor drainage of the cavities allows it to accumulate. This accumulation is an ideal place for bacteria to multiply and the resulting bacterial growth makes the foul odor which is often present with roup.

A simple cold may be avoided or corrected by increasing the warmth with plenty of fresh air and providing plenty of dry litter. If the first stage is not checked the cold may end in roup with its characteristic head swelling and foul odors.

The opinion that roup is a contagious disease is not well founded, according to Doctor Brunett, for there is usually some underlying condition that is indirectly responsible. This may be tuberculosis, or worms, but whatever the cause it should be removed before a cure can be expected.

A third type of cold is more of a distinct disease, commonly known as bronchitis. This condition is acute and the birds die quickly. The cause of the disease is not known. The best treatment is to increase the temperature of the house, either by controlling the ventilation or by using brooder stoves. In the early part of the outbreak it is well to remove all sick birds and put them in heated brooder houses. Most of them will recover when placed in heated houses. Some disinfectants will give relief, but quack remedies should not be used.

### Investigate Cod Liver Oil for Laying Fowls

The summary of experiments in England with cod liver oil for laying hens, says:

(1) Fowls not confined or in open-fronted houses do not require cod liver oil to prevent adult rickets.

(2) Fowls confined behind ordinary glass require some adequate source of vitamin D.

(3) The cod liver oil mixed to the extent of 2 per cent of the grain feed supplied the vitamin D requirements of the fowls under experiment.

(4) One per cent of medical cod liver oil in the scratch feed may not be sufficient to meet the requirements of layers confined behind window glass. The source of oil used may be a factor.

(5) It is not possible to state if cod liver oil is beneficial to fowls not confined or in open-fronted pens getting a normal ration that includes green food.

### Healthy Chick Program Brings Higher Returns

Health sticks to clean chicks! By following four simple points in brooding poultrymen can save 90 per cent of their chicks. Not only more chicks will be saved but they will be more profitable birds to keep as layers and breeders. Grow them clean, and health and vigor will go with them through life.

The four points in the Kansas "healthy chick" program calls for clean houses, clean ground, and clean feed.

By following these four simple rules egg production has been increased 30 eggs per bird in farm flocks. This increase at 25 cents per dozen means an additional return of 60 cents per hen.

### Move Brooder Houses

Brooder houses are commonly made movable in order to change their location and keep the chicks on clean ground.

But much of the convenience of a brooder house is lost when it is moved to a point distant from other farm buildings.

The problem of finding clean ground and keeping it free from disease germs is a difficult one under average farm conditions, but it is a sure road to success.

### Prevent Cannibalism

Cannibalism may develop in a large bunch of chicks, no matter how completely fed or how free from parasites. The liberal use of tar is about as effective as anything in checking it. Watch many times a day for those that have been picked enough to draw blood and daub the tar on the wounds. If you can find something that the chicks dislike the taste of more than tar, use it. If that fails try paring off the point of the upper mandible, using care not to get too deep.

### To Head Off Colds

The common cold is a mystery. Sometimes you get it and sometimes you don't, though conditions may seem the same. One thing you can be certain of, you are less likely to have a cold if you keep your physical condition up to par. Sleep enough, eat enough, exercise a little and not too much, worry not at all. Live up to this program and colds will be few.—Capper's Weekly.

TALMA NEWS ITEMS

Mr. and Mrs. Leon Kotterman and children spent Saturday in Winnamac

Paul Myers and Ancil Jefferies attended the District Farm Bureau meeting at Knox last Friday.

Mr. and Mrs. Paul Myers were guests of Mr. and Mrs. Lewis Bradford of Rochester Saturday evening.

Mr. and Mrs. Linus Borton and children and Mrs. A. J. Riddle were dinner guests Sunday of Harry Cooper and wife. Mrs. Riddle remained at the Cooper home for a visit.

The Talma gymnasium was crowded with fans from Richland Center and Talma on last Friday night to witness three very interesting games. The score for the eighth grade team was 11-22 in favor of Center, second team score was 10 to 11 in favor of Talma, and the first team score was 17-22 in Center's favor.

Mrs. Lou Grove assisted by Mrs. Leon Kotterman was hostess to the members of the Ladies Auxiliary of the Newcastle Twp. Farm Bureau on last Thursday afternoon at her home in Talma. The afternoon was spent in initiating the new members, who were Mrs. Calvin Fretz, Mrs. Earl Zent, Mrs. Gaston Coplen, Mrs. Philip Bryant and Mrs. Harry Herrell. After which contests were enjoyed with Mrs. Wm. Jergensmeyer and Mrs. Main Deamer and Mrs. S. Y. Grove winning the prizes, and invitation was given by Mrs. Otis Nye for the next meeting. Mrs. Joe Peterson, Mrs. Ralph Jergensmeyer, Mrs. Robert Tippy and Mrs. S. S. Grove were guests. Dainty refreshments were served by the hostess.

### Leather Sets

Before starting to polish the leather-seated chairs, wipe off the seats with a cloth dipped in sweet milk. You will be surprised at the dirt that will come off. Then polish as usual.

### High Cost of Carelessness

Carelessness on the part of letter writers gives much additional labor and expense to the government inasmuch as 200,000,000 letters are given "directory service" annually; 25,000,000 of this total are found to be undeliverable and eventually are sent to the dead letter office.

### Carbing Mob Spirit

The expression "read the riot act" means to warn or reprimand. As early as 1715 England had a statue for preventing tumultuous and riotous assemblies. The act provided that in case of 12 persons or more unlawfully assembling and disturbing the peace, an officer could make proclamation of the general provisions of the riot act and call upon them to disperse. If they failed to obey, they were guilty of felony.

### Calves Require Protein Ration During Winter

Young calves trying to live through their first winter on cornstalks, straw, or prairie hay will do much better if given a little cottonseed cake to supply the protein their bodies need for normal growth. Tests of the last few years at the Valentine experiment station of the University of Nebraska have shown that from one-half to one pound of pea size cottonseed cake per calf per day in conjunction with prairie hay is enough to produce the most economical gains. In all these tests, the gains were worth several times the cost of the cake. The cottonseed cake may be fed in bunks, or some cattlemen prefer to scatter it on clean ground by throwing a sack over a horse and letting the cake dribble out slowly as they ride around the field.

The calves used in the Valentine tests were continued each year on pasture during the summer and then fed out the next winter at the agricultural college experiment station in Lincoln. In each case, the completed tests showed that no one can afford to stunt young calves. The thin, stunted calves did gain rapidly on the grass the next summer, but they never caught up with those that had cottonseed cakes the first winter.

oooooooooooooooooooooooooooo

### Dairy Notes

oooooooooooooooooooooooooooo

Provide warm, dry, clean stalls for fall-born calves.

Barley, oats, wheat and corn will not make up a balanced ration.

Gluten feed, gluten meal and bran are widely used in preparing the winter ration.

Feeding large amounts of cottonseed meal, even though it is low in price, is not advisable.

Cows like clover hay. Clover requires about 14 per cent digestible protein in the grain mixture.

Cows will eat mixed hay. Mixed hay requires about 16 per cent digestible protein in the grain mixture.

Time spent in cleaning and washing a separator will pay dividends. A dirty separator will not skim efficiently.

With a roughage very low in protein such as corn fodder, sudan, or timothy hay, feed equal parts ground corn, wheat bran and cottonseed oilmeal. Unless silage is fed, linseed oilmeal is preferable.

For the great majority under normal conditions, some combination of hays is usually available that falls between the two extremes. When the hay consists partly of clover, feed 400 pounds of ground corn, 200 pounds of wheat bran and 100 pounds of cottonseed meal.

### Spring Freshening Cows Have Little Advantage

Although spring freshening cows have the advantage of starting their milking year under ideal feed conditions provided by an abundance of luxuriant, nutritious pasture, the cheapest and best of all feeds, such a favorable environment is short lived. A few weeks later the heat of summer is upon them. Good pasture is less abundant. Pressing work in the field does not permit the farmer to give his cows the attention they require. Flies add to the discomfort of the cows, their milkers and the calves. As a result, cows go down in production and stay down. No methods of feeding have yet been found which will bring them back to good production after they have once been permitted to go down. Furthermore, butterfat prices are generally lower in spring and summer than at any other time of the year.

### Ration for Winter

A feeding program suited to either the man with three to five cows or the specialized dairyman is suggested by E. C. Elting of the Missouri Agricultural college. Because corn is our cheapest feed, he recommends that ground corn or corn and cobmeal form the basis of most rations. Some bulk and variety is desirable and may be furnished by wheat bran, ground oats or both. Bran is also rich in minerals, especially lime. It is advisable to feed some protein concentrate.

### First Wireless Message

The first satisfactory wireless message was that transmitted by Marconi across the English channel on March 27, 1899. The signals were sent from Dover on the English side to Wimereux on the French side.

### France Said to Lead

France is said to have the most perfect system of registration of births, marriages and deaths. In that country it is wholly the duty of the civil authorities, and the methods are so thorough and comprehensive that it is practically impossible for data to be neglected.

### Changes in Australia

The early forms of animal and vegetable life have survived longer in Australia than elsewhere. The country's isolation had this result. Now that plants and animals are being brought across the water from other countries, the original forms of life are being destroyed or crowded out.

### Pantomimes Ancient

The first pantomime produced in England was at Drury Lane in 1702. It was called "The Tavern Builders." It was not until 1723, however, that the noted harlequin, John Rich, established the Christmas pantomime. This form of entertainment had long been popular, having been at its height in Rome in the time of Nero. Pantomime still has thousands of devotees throughout the world.

### Look Within

No man is better than his thoughts, and a bad egg is as good as any other until it is broken; it is the inside of both that defines their worth.—Exchange.

### Terrible Interpretation

What is more annoying than to become engrossed in a first-rate detective story and be disturbed by a woman somewhere in the house shoveling coal?—Kansas City Times.

### A Harder Job

Jud Funks says a great financier is to be admired. But the man who has to think hard and work fast is the one who takes care of current bills with a limited income.

### Keeping Him Amused

Indulgent Mother—Dye mind doing up three pounds of rice in 'alf pounds, Mr Smiggs? It fascinates my little boy to watch you breaking the string on your finger.—Passing Show.

### Date-Growing Profitable

Now the basis of a promising fruit industry the date palm was a few years ago little more than a botanical curiosity in the United States. Approximately 2,500 acres have been planted to dates in America, while 250 acres are now in commercial bearing.

### Felts Have Varied Uses

Hair felts vary from the thick, loosely felted goods which are used for upholstery and insulating purposes, to the hard felts which are used for glass and stone polishing, slipper soles, washers and cartridge wads.

### Alcohol in Industry

Alcohol is the most important solvent, with the exception of water, dissolving many substances that water will not dissolve. It is also important in manufacturing many products, and in the making of ether.

### Watch as Compass

To use a watch as a compass let it lie flat in the hand with the hour hand pointing toward the sun, and the point on the circle half way between the hour hand and XII will be directly south in the northern hemisphere and directly north in the southern hemisphere.

### Children's Toys

We will fill the hands and nurseries of our children with all manner of dolls, drums and horses, withdrawing their eyes from the plain face and sufficing objects of Nature, the sun and moon, the animals, the water and stones, which should be their toys.—Emerson

### Building Character

A Kansas City school bulletin sets forth that "good character is caught rather than taught." This is a catchy phrase and rings out, but it is only true in a degree. Good character is taught in most homes; and it is also "caught" there—by example.—Exchange.

**RECEIVES GOLD MEDAL.**

The latter part of last week Lon Haimbaugh received the Gold Medal that was awarded him and his son by Purdue University in the Gold Medal Colt Club, for the greatest gain in weight in one years time. The colt is a Belgian stallion, and showed a gain of 845 pounds in one year, weighing in at 695 pounds. and finishing at the end of the year at 1540 pounds. This colt took second prize at the Indiana State Fair and is an extraordinary animal. At the present time the colt will weigh 1650 and will be two years old the 26th day of next May.

Lon says that it too good a colt for him to keep and he is desirous of selling him and any one wishing a real horse can get a good bargain.

## Before Breeding, Heifers Should Be Carefully Fed

Up to the time that heifers are bred dairy animals should not be overfed. It is well to keep them in good growing condition, but too much fat is to be avoided. Excessive fattening at this time is apt to stunt growth by rushing maturity and producing a "pony" type of animal. After the heifer is bred, however, feeding can be much more liberal. There are then extra demands on the heifer and it is desirable that she have a good store of nutrients against the first lactation period. If these heifers are on really good pasture they are not suffering, although a little grain now will prove profitable later. Fall freshening heifers that are on poor pasture should be fed well, green feed if possible and certainly grain—three to five pounds per head daily.

## Underfeeding Wipes Out Profits in Dairy Herd

Underfeeding, or feeding of an incomplete ration, keeps down or wipes out profits in many a dairy herd. One reader goes so far as to say that dairy cows are now better bred than fed; that starved purebreds are no better than starved scrubs. There is still room for improvement along both lines.

The point is, every dairy cow should be fed a complete ration, and as much of it as she will turn into profit. It is the wrong way to feed as little as the cow will get along on and still show a profit or just break even.

Cow testing records prove that liberal feeding is not an expense, but an investment.

### KEEP CHICKS SEPARATE FROM OLDER FOWLS.

"Keep the growing stock absolutely from adults," Dr. F. R. Beaudette of New Jersey Agriculture Experiment Station strongly advised those in the poultry section of the Purdue University Agricultural Conference which he addressed several times.

Pointing out the ravages of internal parasites, particularly in growing chickens, Dr. Beaudette referred to the point at which their spread could be mostly easily checked. "Take an egg away from an infested hen," he told the group, "and it is easily possible to develop from it a chick that is absolutely free from internal parasites, and which can be kept free as long as it does not come in contact with adult fowls or with attendants and other carriers which have."

This fundamental principle of raising healthy chicks, he explained can be most easily applied by yarding adult fowls, and raising the chicks on ground on which there has been no poultry manure for at least one complete year.

Attendance at these poultry sessions, centered around the maintenance of flock health, exceeded all attendance records for such events.

Dr. Beaudette was the principal speaker, and brought with him a wealth of practical material gathered from an extensive contact with poultry diseases in Kansas and New Jersey.

### FARM BUSINESS COURSE AT PURDUE FEB. 17 to 19.

Lafayette, Ind., Jan 31, The seventh annual farm business short course will be held at Purdue University Feb. 17 to 19, according to an announcement by the department of farm management of the university.

The program this year, contains talks and discussions on such subjects as farm business analysis, farm record keeping, marketing farm products and the agricultural outlook.

Prominent men from other states, members of the Purdue staff and successful farmers will conduct the courses. Prof. C. R. Arnold, department of farm management at Ohio State University will give two talks on farm organization and management. He is one of the outstanding men in farm management extension work in the country.

D. H. Doane, St. Louis, head of one of the oldest and largest agencies in the comparatively new field of commercial farm management, will speak on the "Reorganization and management of Farms for Greatest Profits" and "Our Agricul-

tural Depression, its Causes, Duration and Cure

Prof. A. F. Hinriches of Purdue will discuss the "Federal Farm Board and Its Relation to the Farmer" Prof. E. C. Young, also of Purdue will make an analysis of the records which have been kept by Indiana farmers during the past year and will also discuss the problem of varying production from year to year to take advantage of changing market conditions.

Farmers will be allotted time for discussion of their own peculiar problems, either in open meetings or in private conferences. Each year has seen more leading farmers and business men attending these meetings.

A complete program for the short course is available to those who write to the department of the Farm Management, Purdue University, Lafayette, Indiana.

# POULTRY FACTS

## FOOD FOR CHICKS GIVEN BY KAUPP

### Mash and Grain Should Be Fed First Nine Weeks.

The 100 chicks with which one will start a poultry flock of 50 hens to be raised, will first need 450 pounds of feed up until the ninth week, and thereafter, for the whole year, the 50 hens selected will need 4,250 pounds of feed.

"The 450 pounds of feed needed for the 100 chicks up until the ninth week should be 250 pounds of mash feed and 200 pounds of grain," says Dr. B. F. Kaupp, head of the poultry department at the North Carolina State college. "Then when the 50 hens are selected from the lot, these hens will need 50 pounds of grain and 35 pounds of mash per hen for a year. This makes at total of 4,250 pounds of feed that should be provided on the home farm. Of this amount 2,500 pounds is grain feed and may be supplied by 23 bushels of corn, 24 bushels of oats and 13 bushels of wheat. To supply the 1,750 pounds of mash feed also in the ration, the grower should raise 10 bushels of corn and 11 bushels of oats."

Some additional feed will also be needed on the poultry farm for young and growing birds, therefore, Doctor Kaupp says, if the average farm keeping a flock of 50 adult hens will produce for the poultry, 25 bushels of corn, 26 bushels of oats and 15 bushels of wheat, the owner will need to buy only about 400 pounds of fish meal or meat meal, 400 pounds of middlings and 75 pounds of bone meal to have his birds well fed.

Doctor Kaupp has worked out a laying mash and a grain feed which has given excellent results on the experimental poultry farms. The successful farmer who keeps a flock of pure-bred poultry as a side-line should not have to buy his feedstuffs. They can be raised and mixed at home with excellent results, declares Doctor Kaupp.

### Delouse Setter Before Putting Her on Eggs

Before you set any hen not known to be absolutely free of lice, give her some sort of treatment to destroy lice and then see that the nest is clean, with fresh nest material. The nicotine sulphate treatment recently discovered is one of the easiest ways to delouse a setting hen. Paint a few dabs of it in the bottom of a box just large enough for the hen to sit in, and put her in it over night. It will not deter her from setting but it will destroy all living lice. Now use a bit of blue

ointment in the region below the vent where lice breed and there will be no lice problem when chicks hatch. If a lousy hen is just about ready to hatch, paint the nicotine sulphate generously in a box that has been warmed to promote rapid evaporation of the fumes, and put the hen in for an hour, covering her eggs with warm flannel in the meantime. Use the blue ointment also to get the nits that may hatch.

There are other ways of delousing which takes more time. Whatever is used, do it before the chicks hatch and avoid the troubles that lice bring.

### Poultry Hints

Liquid skim milk is "great stuff" for chicks. Look out for substitutes.

Buckwheat is often used in the scratch feed. It is high in fiber, although not as high as oats.

Trap nesting is the only sure way to get an exact record of a bird or flock production, but it is hard work.

According to experience it is not necessary to feed cracked corn when good whole corn can be raised or purchased.

In addition to the mash, the hens should be given all the grain they can eat, especially in the afternoon before roosting time.

It is a mistake to crowd 200 pullets into a house 100 feet long. From 3 1/2 to 4 square feet of floor space should be allowed each bird.

Wheat screenings should never be used if musty, smutty or heated because it may have a bad effect on the digestive tract of the fowl.

By trap nesting you are sure to select your best layers and by breeding from them, provided they are of good standard requirements, you can soon increase your flock average.

Poultrymen should be on the alert for the appearance of roup or chickenpox in their flock. Flock owners cannot afford to have their flocks thrown out of production at the season of high prices.

From ten days to two weeks after mating, hatching eggs may be saved. The care of the eggs while holding may influence in no little manner the success of the hatch. Eggs should be held in a dry room at a temperature to 55 to 60 degrees Fahrenheit and turned at least once each day.

#### Constancy of Wife

The constancy of the wife is only the art of keeping disquietude to one's self.—Rochefort and.

#### Evil of Avarice

The lust of avarice has so totally seized upon mankind that their wealth seems rather to possess them than they possess their wealth.—Pliny.

## Canadian Field Peas

### Alone Not Recommended

In parts of the Pacific Northwest, Canadian field peas are grown extensively and grades of low merchantable value are available as feed for live stock. These low priced peas have become popular as hog feed in the Palouse country of eastern Washington and northern Idaho. These peas have been made the main feed for brood sows during the winter, which is also the period of gestation.

As time went on, the question arose as to the effect of this practice upon the physical condition of the brood sow and the resulting effect upon the weight and vitality of the pigs.

Since the value of pigs is to a great degree established by their vigor at birth, the Idaho experiment station made an investigation of the effect of the pea ration. The investigation disclosed that frequently brood sows fed too large a proportion of peas went off feed. Throughout the investigation pigs farrowed in the herds which were fed on peas were small. From the check pens the greater number of pigs weighed from 2 to 3 1/2 pounds at birth, while in the others the greater number of young weighed 1 1/2 to 2 1/2 pounds. The smaller pigs were also less vigorous. The investigators at the Idaho station have recommended that brood sows be fed a supplementary ration where peas are utilized.

## Heaviest Infestations

### of Worms Among Lambs

Sheep of any age are liable to infestation with stomach worms, but the heaviest infestations are usually among lambs. Infestation may occur at any season of the year. The trouble is usually first noticed in young lambs about the middle of the summer, though it may become evident much earlier, depending upon the temperature and moisture conditions that have prevailed. Often the first notice that infestation is present is the death of one or more sheep or lambs. However, if the flock is closely attended the symptoms of stomach worms are usually noticed before death claims its victim.

### Give Ewes Variety

Advice about feed of ewes before lambing is stereotyped to one kind of hay and two of grain. Think of the body needs of the mother, and what is needed for the growth of the lamb. Sheep cannot have too many kinds of hay, and if there are weeds in it when forked in the hay rack, notice the heads on both sides reach for them. A sheepman has no horror of weeds either in his pasture or hay. The sturdy little animals thrive on any kind of weed.

#### The Fourth Estate

Carlyle in "Heroes and Hero Worship," says: "Burke said there were three estates in Parliament, but in the Reporters' Gallery yonder, there sat a fourth estate, more important by far than they all."

## HOW TO LIVE LONGER

By John Clarence Funk, A.M., Sc.D.

Director of Public Health Education,  
State of Pennsylvania

### Tinkering

THERE are some automobile owners who are forever pulling their machines apart and putting them together again. Evidently they do this under an inflated idea of their mechanical ingenuity, thus hoping to improve upon factory adjustments. As a general rule it is this type of person who is always complaining about his car's poor performance.

This tinkering business is bad enough for motor cars, but it is vastly worse for human bodies. The most that can happen to the automobile is that it will be ruined. And money buys another one. Human beings, on the other hand, are not factory products. When injured by tinkering they either remain that way, or pass out of the picture entirely and forever.

Yet, in spite of this well-known fact, it is positively remarkable how many tinkers there are in the United States today. They divide themselves roughly into two classes. Those who show an undue affection for the home remedy and quack product, and those who permit that old hughaboo worry to influence their imagination to distressing proportions.

It is not at all surprising that with so many of these people around that at least 4 per cent (and this is a very conservative estimate) of those who visit doctors have nothing whatsoever wrong with them. Little wonder that advertised cure-alls are so potent! Nor is it any puzzle to understand how so many unfortunates make themselves physically and mentally ill through the power of a vivid imagination.

If people would only realize that to self-diagnose a real or supposed case of disease and then swallow a self-administered dose from a beautifully labeled bottle, represents about the worst type of tinkering on earth there would be fewer deaths at the wrong time.

If for any reason, however, you conclude that you are ill, don't brood over it. Seek advice. If the physician pronounces you sound, let that be that. If actually sick, then follow the doctor's orders. Under no circumstances tinker.

## An Investment When you spend your money with your home merchant it helps to make a live town—a good live town increases property values That Pays Dividends

### MENTONE TO HAVE MODERN SCHOOL BUILDING.

**It Is Something That Has Long Been Needed—And Late Developments Indicate That We Are Going To Get It.**

The question as to whether or not it would be possible to erect anew school building for Mentone and Harrison Township, starting building operations this spring, seems to have been definitely settled in the past few days.

On Tuesday, Feb. 4, Chas. Shafer, F. R. Burns and Richard Greulach went to Indianapolis where the proposition was laid before the state board of education, and they were asked if there might not be some law that would permit the erection of a new building, where conditions of the building were as bad as they are with the present structure at this time. The board at once cited such a law, the only requirement being that a petition be presented to that body signed by twenty-five per cent of the voters of Harrison Township, embodying a request for a new building, and that evidence be submitted showing that the present building was no longer fit for school purposes.

Thursday, the next day, the state fire marshal made an inspection of the building and found it to be a fire hazard of the worst kind, but refrained from pad-locking it because there was no available room that might be used in which to conduct school. Never the-less he left a warning that this condition could not always exist and that something must be done before another school year. It is understood that a state health officer will make an inspection within the next ten days. Those who know the conditions of the plumbing, toilets and sewage system hope that his demands will not be too severe, especially as we have no adequate place in which to hold school.

### MODERN FIRE FIGHTING EQUIPMENT PURCHASED.

**The Town of Mentone and Surrounding Country to Have More Adequate Fire Protection.**

For some time the fire hazard has been considered with a view to giving the farmers of this vicinity protection and at the same time not to leave the town wholly unprotected while an alarm was being answered in the country.

It has been finally decided to keep the old truck in service for an emergency and to buy a new modern truck equipped especially for fighting rural fires. This truck will carry the following equipment: Pump for use where a plentiful supply of water is to be had; chemical tanks for the use where the water supply is limited. At all times the chemical tanks will arrive at the fire fully charged and in addition the truck will carry a large tank

of water for immediate use. There will also be hand extinguishers, ladders, pike poles, axes, crow bars, plenty of hose and all the minor equipment that goes to make a complete fire fighting unit.

The truck will be capable of making over fifty miles per hour on country runs, and the fire department is fully trained in the use of the new equipment by engineers from the Boyer Company so that full benefit may be derived from the new outfit.

Solicitors will start in a few days to canvas the rural community for pledges towards the purchase of the apparatus and we hope that the farmers will be liberal in their support as it involves quite an expenditure of money, and is in reality more to their benefit than the village to have this modern equipment.

Besides assisting in the purchase of the new truck, the town is to house, maintain, and man the apparatus and answer calls to the farms of the subscribers to the fund.

### FIRE DEPARTMENT REORGANIZED.

The town council at a recent meeting appointed Richard Greulach as Fire Chief, who immediately called a meeting of the fire fighters and the following members were enrolled and assigned as follows: Robert Reed, Assistant Chief and assistant driver; K. A. Riner, driver and operator; F. R. Burns, operator; Geo. Clark, operator; Earl Shinn, operator; E. E. Wagoner, nozzleman and water hose; John Latham, nozzleman and water hose; Don Ernsberger, nozzleman and chemical hose; Bud Barkman, nozzleman and chemical hose; W. A. Warner, assistant nozzleman; Ralph Ernsberger, assistant nozzleman; Geo. Mollenhour, assistant nozzleman; E. J. Carter, Hydrant; H. V. Johns, lineman; Joe Igo, lineman.

Chief Greulach realizes that due to the various occupations it will be impossible for all members to be present at every fire but he expects to have at least one half of the members present on each occasion. Every man will be familiar with his respective duties and the department will at all times be capable of delivering efficient service.

### BE SURE TO ATTEND THE TELEPHONE MEETING.

Every phone user, business man and farmer should make every effort possible to attend the telephone meeting at North Manchester on Wednesday of next week and register his protest against any increase in phone rates. The meeting is called for ten o'clock in the forenoon, and it is hoped that a large delegation from this vicinity will be present to fight the proposed raise and to demand that free service be re-established between neighboring exchanges.

In case of failure to block the phone company at this meeting our only hope of getting justice will be to discontinue phone service. However the presence of a large number of patrons will possibly cause the Commission to refuse the increase in rates—so by all means make it a point to be present.

## Cares of State Forgotten

Abraham Lincoln reading to his son Thomas (Tad).

## "Little Tad" Father's Pet

"Whatever became of Little Tad?" is the question I have been asked oftenest in my work of bringing forth new stories about the greatest of all Americans. Even those whose memories cover the two generations from the time Abraham Lincoln was living in the White House seem confused about the identity of "the Child of the Nation." In Tad's day he was more widely known than Robert.

Tad, on account of the strange pet name his father had given him, has been confused with Willie, who died in the White House in February, 1862, or with Robert, who survived his father more than sixty years, to be secretary of war and United States ambassador to the court of Great Britain, as well as highly prominent in big business as president of the Pullman Palace Car company.

But the Lincolns' youngest son always will remain, "Little Tad" in the minds of the American people, though he grew to be a stalwart youth and lived a while in Germany, where, as has been related, he won the childish devotion of the little girl who was afterward married to the last of the czars of Russia and who heroically met the tragic fate of the Romanoff dynasty there.

In preparing this series of "New Lights" it has been necessary to review the many sources of light on Abraham Lincoln and his family. In this process of research for "things new and old" I have been surprised to find how many of the best Lincoln stories were started on their cheering way by the artist Frank B. Carpenter, who wrote "Six Months in the White House" after spending the first half year of 1864 there for the purpose of painting the now famous picture of "Abraham Lincoln Reading the Emancipation Proclamation to His Cabinet."

### Near the President.

Carpenter wished to live near the President in order to catch his natural expression as well as to be at hand to arrange a sitting for the picture whenever possible. In that half year the painter saw and heard the best stories about Lincoln, which fact shows there were many times more stories which might have been related from and about Lincoln if some one had only been on hand to jot them down as Frank Carpenter was inspired to do; for Abraham Lincoln was himself a master story teller.

As one story suggests another, since I have been relating the new stories picked up in the course of twenty years writing for newspapers, books, magazines and moving pictures, I have received letters with stories from eye and ear witnesses

from all parts of the country, even dating back as far as Lincoln's young manhood. Since the appearance of this series of "New Lights" I have received word from Michigan, Wisconsin, Illinois, Washington (state), Oregon and California, offering fresh anecdotes which have never been published about Lincoln, who became the source of more stories than any other human being in history.

Naturally Carpenter's little old book could not have been true to the life if he had not related a number of tales about "Little Tad," to the first of which I now refer in order to make these stories more intelligible to the present-day reader. Here is the great portrait painter's introduction of Tad Lincoln:

"Some photographers from Brady's gallery came up to the White House to make some stereoscopic studies for me of the President's office. They re-

The Rutledge tavern where Lincoln came to know Ann Rutledge.

quested a dark closet in which to develop the pictures and, without a thought that I was infringing upon anybody's rights, I took them to an unoccupied room of which 'Little Tad' had taken possession a few days before, and with the aid of a couple of servants, had it fitted up as a miniature theater with stage, curtains, orchestra, stalls, parquet and all. Knowing that the use required would not interfere with his arrangements, I led the way to this apartment.

### Tad Asserts Rights.

"Everything went on well and one or two of the pictures had been taken, when suddenly there was an uproar! The operator came back to the office and said that Tad had taken great offense at the occupation of his room without his consent and had locked the door, refusing all admission. The chemicals had been taken inside and there was no way to get at them, he having carried off the key. In the midst of this conversation Tad burst in, in a earful passion! He laid all the blame upon me—said that I had no right to use his room, and that the men should not go in even to get their things, for they had no business in his room!

"Mr. Lincoln had been sitting for a photograph and was still in the chair. He said very mildly: 'Tad, go and unlock the door.' Tad went off, muttering, into his mother's room, refusing to obey. I followed him, but no coaxing would pacify him. On my return to the President, I found him sitting patiently in the chair, from which he had not risen. He said: 'Hasn't the boy opened that door?' I replied that I could do nothing with

him—he had gone off in a great pet. "Mr. Lincoln's lips came together firmly. Suddenly rising, he strode across the passage with the air of one bent on punishment and disappeared in the domestic apartments.

"Directly the President returned with the key to the theater, which he unlocked himself. 'There,' he said, 'go ahead; it is all right now.'

"He then went back to his office, followed by myself, and resumed his seat.

"Tad," said he, half apologetically, 'is a peculiar child. He was violently excited when I went to him. I said: "Tad, do you know you are making your father a great deal of trouble?" He burst into tears, instantly giving me the key.'—Wayne Whiffle, in the New York World.

The true rule in determining to embrace or reject anything is not whether it have any evil in it, but whether it have more of evil than of good. There are few things wholly evil or wholly good.—Lincoln.

Abraham Lincoln when he was practicing law in Springfield, Ill. The majority of his portraits at that time show him with his hair carefully parted at the side, combed and plastered down. He did that especially to sit for his photograph, but the most of the time his hair was uncombed and tousled, as it is shown in this picture.

### On Rainy Days

If your children grow tired of this or that toy game, collect these into one big box in the attic or cellar and reserve them for rainy days. They forget them when they are put away and will take new interest in them.

### Stern Religion

The Buddhist religion warns against drinking intoxicants, dancing, singing, playing musical instruments, wearing jewelry, using perfumes, or sleeping in a soft bed.

### The Green-Eyed Monster

The jealous man's disease is of so malignant a nature that it converts all it takes into its own nourishment.—Addison.

MENTONE NEWS ITEMS

Alonzo Blue Jr., is reported to be on the sick list again.

Mrs. Lizzie Hibschan has been quite sick the past week, but is reported to be improving.

Mr. and Mrs. Ed Whetstone and son Charles, and Billy Blue, spent Saturday in Logansport.

Mary Jane Borton began the duties of her new position at the Farmers State Bank Thursday of last week.

Mr. and Mrs. Lee Blue and children spent over Sunday in Warsaw with Mr. and Mrs. Charles Personett.

Mr. and Mrs. Henry Bradway of Kokomo were the guests of Mrs. Bradway's father, Allen Jefferies

Mrs. Marjorie O'Neil of Chicago, was the guest of her mother, Mrs. Charles Krathwohl, the latter part of last week.

Mr. and Mrs. Ray Dillingham and daughter Georgia, spent Friday in South Bend the guests of Hess Dillingham.

Mr. and Mrs. Arlo Freisner and Mrs. Emma Blue spent Sunday in South Bend the guests of Mr. and Mrs. Vincent Brockey.

Several from Mentone attended the supper and cake walk at Beaver Dam, Thursday evening. Everyone reported a fine time and a large crowd.

Mrs. M. R. Kizer who has been spending the past few weeks in Chicago with relatives, has returned to spend a few weeks with Mr. and Mrs. Don Ernsberger.

—See Luther Fife, 406 N. Tucker St., when in need of plumbing.

ARGOS SCHOOLS CLOSED.

Several of the pupils ill with Small Pox. caused the officials to close the public schools at Argos last week. It seems that Mentone is about the only town in this locality that has not had a case of this disease.

New Plumbing Establishment.

Luther Fife, an experienced plumber from South Bend, has opened a plumbing, heating and general repairshop at his residence at 406 Tucker St., in Mentone. He comes to us as a first class mechanic, who thoroughly understands his business and will guarantee all the work that may be given him. He also wishes to state that he will do all kinds of soldering. Has his advertisement in this issue.

—Call the new plumber, Luther Fife, phone 3-178, when heating system or plumbing is out of order.

BAPTIST CHURCH NOTES.

Our interest is now centering on our special meetings beginning Sunday, Feb. 16. Mr. E. E. Wiley of Bourbon will have charge of the music, and the pastor, Rev. V. E. Squibb, will preach each evening, sermons based on the book of Revelations.

Begin now to make plans to attend every service so that you will be able to follow the contents of this most interesting and significant book.

Purdue News Service.

PURDUE SPEAKER TALKS

ON FORMING CALF CLUBS.

Lafayette, Ind., February 10.—Some tips on "Organizing Dairy Calf Clubs" were given by E. A. Gannon, associate in Dairy Extension at Purdue University, during the recent agricultural conference here

Some of the suggestions he made are as follows: "When interest in dairy calf club work is manifested in a community, a meeting of those interested should be called to discuss organization, breed of calves supervision and leadership. The various committees should be carefully selected in order that they may function properly when responsibility is placed upon them.

"The more important committees that will require careful attention are the advisory, finance, purchase, distribution, supervision, exhibit and premium committees. Each committee has a definite piece of work to handle and the success of any dairy club will depend largely upon the supervision the members receive from the various committees.

"The members of the calf club should be as carefully selected as the committees. Interested wide-awake members will respond to proper leadership, while indifferent members will not respond as well.

"In selecting heifers, particular attention should be paid to the breeding, individuality and health of the calves. Heifers sired by the best breeding bulls available and out of large, well developed dams with proper type and records of production should be obtained.

"Every precaution against disease should be taken; select calves from T. B. free herds or accredited herds, and from abortion free herds."

Details on forming and conducting a successful calf club are outlined in Extension Bulletin No. 143 which may be obtained from county agents or the Purdue University Department of Agricultural Extension, Lafayette, Ind.

## ST. VALENTINE'S DAY

Up from the south at the break of morn,  
Over the snow by the south wind borne,  
Steals like the dawn or a sweet perfume  
Promise of summer with bird and bloom.  
This is the month when the banks of snow  
Gurgle in streams to the rivers below.  
This is the month of the mating moon,  
Brooding new life that shall wake in June.

Down on the shores of the southern stream  
Wild birds are chanting the deathless theme.  
Voices of black bird, of wren, and dove  
Warble the song of nest and love,  
Borne by the breath of the southern breeze,  
Soon they will brood in the northern trees.  
Each one will croon, from his tree or vine,  
Love-laden lays to his Valentine.

Come, lonely heart, put your sorrows away—  
This is the month of St. Valentine's day,  
Why should you pine in your gloom apart—  
No one to love you and call you sweetheart?  
Catch in your bosom the spirit of Spring;  
Come, join the chorus of lovers who sing.  
Maids in despair now in sadness repine,  
Waiting the call of St. Valentine.

—The Woodmen News.

### Valentine Customs and Superstitions of Old

There were certain superstitions during early times which now seem entirely to have passed away. For instance, if a young girl, on the eve of St. Valentine's day, went alone and waited until midnight on the porch of a church, then started for home, scattering hempsced on the way, it was believed she would see her own true love in a winding sheet raking the hampseed behind her. Why he was supposed to be seen in a winding sheet has not been explained.

Another superstition was most interesting. If a young girl got five bay leaves and pinned one on each of the four corners of her pillow, the remaining one to be placed in the center, and if that night her sweetheart appeared in her dreams they would be married before the end of the year.

It is written of one young lady of those times that she confessed, in order to make the charm more potent, to having boiled an egg perfectly hard,

removed the yolk, filled the vacant place with salt and, upon going to bed, eaten the entire egg, salt, shell and all, without drinking or speaking to any one after she had finished the eating of it.

But the really, truly way to find out the name of your own true love was to write the name of all your admirers upon bits of paper, roll them up in clay, put them in a vessel of water and the first one to rise to the surface was surely the one.

The practice of sending comic valentines is a much later one. These caricatures which poked fun at people's personal appearance, their clothes and even the work in which they were engaged had their greatest popularity perhaps 40 or 50 years ago. Fortunately, they now seem to have lost their vogue. There is no doubt that many friendships were severed and enemies made because of these frequently offensive missives being sent with malice aforethought.

Meanwhile, the pretty valentines—all hearts, paper lace and cupids—seem to grow finer each year. Beautiful hand-painted cards and painted and beautifully decorated boxes for confections are sold in great numbers.

Not the least interesting of the present-day valentines are the various and numerous assortments of packages filled with all the paraphernalia ready to be assembled into lovely valentines which children love to prepare for their teachers, friends and family. As it has now become more a day for children than for grown-ups, these packages afford much pleasure to the sender and to the recipient.

#### Strange Mistake

While looking for work, Brother Charley had a strange experience. He was in a pool room for three hours before discovering it wasn't an employment agency.—Detroit News

#### Poetic Name for Ireland

Innisfail literally means Isle of Destiny. It is a name that was frequently applied to Ireland by the ancient bards.

#### Of Different Species

Brazil nuts and butternuts are not the same. The brazil nut is native to Brazil. On the tree the nuts form a bowl-like pod containing six or eight nuts. The butternut is a species of American white walnut, and grows one out to the pod.

#### First General Use of Filter

Following the severe cholera epidemic of 1849, the British parliament, in 1852, made compulsory the filtration of the entire water supply of the London metropolitan district, and this marked the first of a series of attempts to purify water for hygienic reasons.

## Work of Two Brilliant Men Revolutionized Dairying

### Prying Professor Found Simple Way to Measure Fat Content of Cream; Cream Separator Work of Swedish Inventor.

Dr. De Laval.

Two adventurous and brilliant men working in different parts of the world practically revolutionized the greatest rural industry in the United States. A prying professor named Babcock, working in the laboratory of the Wisconsin College of Agriculture, found a simple, accurate way to determine the butterfat content of milk or cream. A brilliant inventive genius named De Laval, laboring in his workshop in Sweden, found a way by which whole milk could be accurately, continuously and quickly separated into cream and skim milk. De Laval also inaugurated the research which resulted in the widely-used efficient mechanical milker of today.

Professor Babcock's discovery standardized the dairy industry. Doctor De Laval's separator saved farm women millions of dollars' worth of cream while his milking machine saved farm men millions of hours of drudgery.

"When it is realized," says Dr. C. W. Larson, former director of the National Dairy Council, "that the change from the gravity method of obtaining cream for buttermaking and other purposes to the continuous separator resulted in the saving of labor, a better quality of cream and butter, a skim milk superior for feeding purposes and available for the manufacture of by-products, and a great saving of the butterfat that was lost in the skim milk, the value of this ingenious invention can scarcely be overestimated."

#### Old Methods Wasteful.

"If all the cream that was used in this country last year for making butter alone had been separated by the deep-setting system, which was the best method known at the time the centrifugal separator was invented, more than \$35,000,000 worth of butterfat would have been left in the skim milk. This does not take into consideration the enormous quantity of

cream that was used as cream and for making ice cream. By the old method much more labor would have been required in the homes and in the factories, and the present high quality of products could not have been made."

The cream separator eliminates the great waste which accompanies hand skimming methods. According to experiments conducted at the Indiana State Experiment Station in separating a certain quantity of milk, 26.2 pounds of butterfat were lost by shallow pan gravity setting, and 40.07 pounds were lost by water dilution, while only 1.2 pounds were lost when a centrifugal separator was used. This gives one an idea of the enormous losses which occur from hand skimming and which a good separator eliminates. In addition, it saves all the time, trouble, bother of setting, handling and washing pans, and provides the skim milk in a sweet condition, ideal for feeding young stock. This is extremely important, as much of the profit from dairying comes from proper utilization of skim milk.

#### Find Worn Separators Faulty.

There are many separators in use today, however, that are wasting valuable butterfat in the skim milk without the owner knowing of his losses. Badly worn separators, or ones that were of faulty construction to begin with, should be replaced. A farm wife can tell whether her coffee grinder is grinding fine, medium or coarse by merely looking at the texture of the coffee after it has passed through the grinder. But no one can tell how much cream a separator is wasting by looking at the skim milk, nor by filling a glass with skim milk and allowing it to "set" on the window sill for a day or more to see how much cream rises to the top. When one "sets" skim milk that has gone through the separator it cannot be expected that the small, hard-to-get fat globules will work their way through the milk serum and rise to the top unless there is an unusually heavy loss. "Setting" skim milk is merely an impractical way of trying to test an inefficient separator by the more inefficient gravity setting "test."

#### Santa Claus, for Instance

There are people who argue that heroic and beautiful legends, even when proved false, should be preserved and repeated for the inspiration they lend.—Woman's Home Companion.

#### Importance of Toys

Authorities on child guidance find that toys are important in the early education of a child. They teach the child to use his hands and brain, and aid in forming desirable habits if properly directed.

## Many By-Products to 'Cream Farming'

### No More Profit to Farmer in "Higher Price" of Fluid Milk.

The best system of farming is the one which results in the greatest financial advantage and contributes most to the farmer's economic wants, according to the De Laval Bureau of Dairying. It's the profit, not just the amount received for farm products that counts.

During recent years there has been a tendency among farmers to go into the production of fluid milk for the big city market without realizing that it costs in the neighborhood of 50 cents per 100 pounds more to produce the kind of milk consumers in the cities are demanding. Surveys made by a Mid-Western Agricultural college showed that it was costing farmers \$2.15 to \$2.60 per hundred pounds to produce milk for which they received only \$2.50, and that of the 14 cents per quart of milk paid by the consumer the dealer received 8.6 cents and the farmer 5.3 cents.

#### Higher Price, But No More Profit.

The desire to sell milk as whole milk rather than as cream or milk to be converted into butter or cheese is due to a belief that the "higher price" leaves the greatest profit, says the Bureau. The skim milk profit angle is too often completely forgotten. When whole milk is shipped the profits that could be made from skim milk, the valuable by-products of "cream farming," are lost. The returns it is possible to make by properly making use of the skim milk retained on the farm after the cream has been separated from the whole milk is something far-sighted stock and dairy farmers should not overlook.

An explanation of the advantages of retaining skim milk on the farm is worked out in an example cited by a leading dairy authority as follows:

"The good creamery last year paid at least an average price of 50 cents a pound for fat. This would bring a return of \$1.75 net for 3½ per cent milk. The skim milk left on the farm is easily worth 50 cents out of every 100 pounds, provided of course the dairy farmer is raising the right kind of live stock. This brings his milk to \$2.25 net. It has been calculated by those who have given the matter study that it costs in the neighborhood of 50 cents more to produce the kind of milk that the consumers of Chicago are demanding. Adding this to the price returned by the creamery, we have \$2.75. Out of this \$2.75 the expense of operating the association must come and the milk must be hauled to the local plant, which costs from 10 to 20 cents a hundred. In other words, the person selling whole milk can scarcely expect to net any more than \$2.50 a hundred. This would leave but 25 cents a hundred for the production of milk over that which the creamery pays and it is

doubtful whether this will compensate for more than 50 per cent of the additional costs of producing market milk. Here's How to Figure It Out.

"Further, when skim milk is used on the farm it permits a different type of farming to be developed. It is difficult, indeed, to say how much more a farmer can earn if he raises his calves, some hogs and chickens. This will depend upon the management of the farm, but it is a factor of no small consequence and should be considered by those who would leave their creameries and cheese factories in order to get what appears to be a much higher price for their milk."

## FIND MECHANICAL MILKER CUTS COSTS

Tests completed at the Iowa State Agricultural college showed a saving of 50 per cent in time and 25 per cent in costs by milking cows through the use of a mechanical system, reports the De Laval Bureau of Dairying.

The experiments were conducted to determine the labor economy and any reduction in costs that might come through the use of the milking machine as compared with the common practice of milking by hand. The objection frequently heard that the saving in time achieved by mechanical milking is more than offset by the extra labor involved in washing the utensils was shown to have no basis. It was found that with the machine the entire milking job, including the necessary cleaning of the mechanical equipment, could be done in half the time required by hand. It was also shown that the saving in labor cost more than offset the cost of the milker. Not only did the milking machine save time and lower the cost of the milking operation, but it also removed a great deal of the drudgery of milking.

## Costly to Feed Hogs Skim milk Rich in Fat

On many farms wornout, improperly designed or poorly constructed separators are in daily use, despite the valuable educational work of the agricultural colleges, county agents and cow-test association supervisors states the De Laval Bureau of Dairying. Instead of serving as "cream savers" these faulty machines have become "cream thieves." One state cow-testing association report published last year showed 19 separators losing \$50 a month. It is costly business to feed butterfat worth \$44 per hundred pounds to hogs selling for between \$8.00 and \$12.00 per hundred.

### "Parsifal" Find Genuine

Seven ancient manuscripts, two containing parts of "Parsifal," which were discovered in the city archives of Waserburg, Germany, have been declared to be genuine. The writings contain parts of poems by Wolfram von Eisenbach, and five long manuscripts from part of the poem "Willehalm," sections of which were previously unknown.

## Try This Test on Your Separator

Setting aside a glass of skim milk to await the rising of any cream in it to the top is the least efficient and least accurate way that can be used to determine the amount of butterfat lost in skim milk, says the De Laval Bureau of Dairying. When cows are in certain periods of lactation or eating dry feeds in the winter months, cream may be present in the skim milk and yet not show at the top of the glass. Depending on this kind of test to deter-

Reskimming skim milk to test the efficiency of the separator.

mine the efficiency of his cream separator, a farmer may be losing from 5 one-hundredths to 15 one-hundredths of one per cent butterfat and never know that the poor separator is causing him to lose from \$12 to \$36 worth of butterfat a year.

The most practical, positive way to test skimming efficiency—the best way to catch the cream thief—is to take five gallons of skim milk from a separator and reskim it in a good separator. This method produces the evidence and shows the farmer how much butterfat he is feeding to his hogs and chickens. If the owner of the cream-stealing separator will take the cream recovered by the good separator and have it tested by the Babcock test, he will likely find his year losses on butterfat, in a herd of six cows, are four or five times more than enough to pay the annual cost of owning a dependably accurate separator of the highest type.

### Surprise Birthday Party.

The members of the Mentone Basket Ball Team, coach and family gathered at the country home of Mr. and Mrs. Claude Barkman on Wednesday evening Feb. 5, to await the coming of their son Walter. Upon entering the house he was greeted by his team-mates which was a big surprise to him. Upon entering the dining room, the table was spread with places for all, the center of the table being decorated with a beautiful birthday cake, lighted with eighteen candles. The color scheme of black and orange was carried through out the entire house. After the serving of a two course dinner and the boys had visited a while, the captain of the team, presented Walter with a beautiful toilet-set from his friends.

The remainder of the evening was spent visiting and playing different games. Pop corn was also served to the guests. At a late hour all departed wishing Walter many more happy birthdays. Those present: Walter Fenstermaker, Edgar Igo, Donald Vangilder, John Mathews, William Blue Donald Lyons, Walter Barkman, Kenneth Barkman, Mr. and Mrs. Ronald Goshert and sons Lewis and Billy and Mr. and Mrs. Claude Barkman.

### HIGH SCHOOL ATHLETICS.

Encroachment on Time of Pupils  
Denounced by State Board.

Indianapolis, Ind., Feb.8—Warfare upon encroachments of athletics and other activities upon the study time of Indiana High school students was declared by the state board of education here.

After hearing denunciations of present emphasis upon sports and extracurricular activities, the board adopted a resolution directing Roy P. Wisehart, state superintendent of public instruction, "to examine the statutes to determine how far the board can go in protecting the school pupils of Indiana from growing encroachments of extraclassroom activities."

#### Action Is Condemned.

The discussion arose when Dr. Henry B. Longden, vice president of De Pau University condemned the action of Greencastle high school in playing three basket ball games last week.

Then President Edward C. Elliott of Purdue University, author of the resolution, said 200 students had been dismissed from Purdue for defective scholarship, largely because outside activities had prevented them from studying.

President Lemuel A. Pittenger of the Ball Teachers' College of Muncie cited similar figures for his school.

### PSI IOTA XI.

The regular monthly social meeting of Psi Iota Xi was held Friday evening at the home of Artella Kesler. Preceding the social hour, Bernice Kesler was pledged to the sorority. Another special feature of the evening was a Bridal Shower given in honor of Mrs. Nellie Lyon Reed, at which time she received many practical as well as beautiful gifts.

### NOTICE.

The Ladies Aid of the Methodist Church will hold a market, Saturday February 15th, at Sarber's Grocery. All kinds of good things to eat.

## Analyzing ...YOU...

With the New Science of Syllabics

By C. J. COFFMAN  
Dean of All the Enumerators

### Anne

"Who is it that intrigues the effort of man  
And makes him more noble as fast as he can?  
Who is it that gave him success as he ran,  
To fulfill his life-work, the answer is Anne."

You are the answer to the young man's prayer in more ways than one.

The Firm Mouth of Anne.

Anne. Your name comes very naturally from an ancient word meaning to answer or bear witness. By shortening this ancient syllable to your two first letters, AN, we have a meaning similar to wherever, or anywhere. This may imply that anywhere you go, you are the answer, as inferred in the verse above.

Your strong, kindly mouth indicates this, and shows you able to go through complicated tangles of surmises, to find the real answer.

Among the most notable of those who have found the right answer to life, might be mentioned Anne Morrow Lindbergh. A more beautiful or romantic setting could scarcely be imagined.

Or, we might mention Anne Nichols, who wrote the successful play, "Abie's Irish Rose," which ran for seven years on Broadway. Through this play, Anne "rose" from obscurity and comparative poverty to real wealth and attainment.

What is possible to Anne, is possible to Anne, even if your other name is not Nichols or Morrow.

So plunge ahead, and do not use the wrong part of your name, the NAH, which meant to humble yourself.

Anne is the best version of your name, and the strongest one, so keep it in just that spelling.

(© 1930, Western Newspaper Union.)

### Huh?

Some Americans were standing in front of St. Paul's cathedral in London. A fellow countrywoman drove up and stood near them—apparently drinking in the majesty of the cathedral's beauty. Suddenly she turned to one of the group. "What do you suppose that church weighs?" she asked. —London Tit-Bits

### Lightest of Metals

Lithium is said to be the lightest of metals, having a specific gravity of 0.59. There are eight metals between this and aluminum, which has a specific gravity of 2.6. Therefore, aluminum may be said to rank tenth.

## LOVE'S MESSAGES

Val-tine, like butterflies,  
Fly no. th, fly west,  
Seeking each a true heart  
That love has blessed;  
Seeking each a fond heart,  
But fond or true,  
None can beat as my heart  
Still beats for you.

Val-tines, like sailing birds,  
Fly south, fly east,  
Seeking each a love land  
Where love may feast;  
Seeking each its own kind  
The whole world through;  
Ne'er finding more love  
Than I give you.

Val-tines, like fairy folk,  
Fly high, fly low,  
Seeking choicest gift of earth  
That man may know;  
Seeking love you gave me  
When life was new;  
Love that lives forever,  
That I gave you.  
—Ohio Farmer.

### Nothing Sedate About

#### Valentines of Today

Sedate stanzas whispering guardedly of love characterized the early American valentines, as shown in a collection made by the Chicago Historical society. Changing times produced more direct expression until in 1930, the collection reveals, the valentine verse makers leave no doubt of the senders' amorous sentiments.

The earliest valentine shown is dated 1800, but all before 1850 were hand-made affairs, generally a red heart with a pretty but proper inscription.

Miss Esther Howland began making valentines commercially in 1851, the society points out, and it is from that time on that the lacy, heart-embossed creations date. Many of Miss Howland's valentines were simply inscribed: "To one I love."

Comic valentines appear to have enjoyed a perpetual vogue throughout the years, the society showing many which it describes as "ridiculous, witty and severe."

One of the valentines of the World war period has a picture by John T.

McCutcheon, cartoonist, with verse by George Ade. The picture shows a mother who has apparently censored her daughter's mail to a soldier abroad. Beneath is printed:

Mr. Soldier Man:  
I cannot send what my daughter wrote.  
It might set fire to the darned old boat.

I HAVE CAUGHT YOU, VALENTINE

#### Valentine Presents

Not so very long ago, in some parts of England valentines were something more than we understand them today. Not only were messages and verse decoated by hearts and darts, sent by post, but on the eve of St. Valentine day it was the custom to leave on the doorsill of friends presents of all kinds. Such bulky articles as a desk and an armchair were known to have been left there. The donor would then knock and disappear to watch from some vantage point until the door was opened and the valentine present taken in.

#### Sentimental Messages

Sentiment expressed on early valentines prove that the gentleman then meant the words he inscribed or that breach of promise suits weren't as customary as they are today. The wise young man of 1930 is satisfied with "To my sweetheart" inscribed on a large, red heart filled with chocolates, but a message inscribed in 1865 read as follows: "To my friend: The charm that best can sweeten life is found to be a faithful wife; the wife I seek—good, kind, and true—love whispers I shall find in you."

#### Caused by Wind

The vibration of high-tension power lines is caused by the wind. These vibrations seem to be transmitted along the line from span to span, causing them to continue across spots where a lull in the wind exists. It is the same phenomenon as the humming of telegraph wires.

## Every One Has It---COLD--

Either sore throat, cough or head colds. Relief is what you want, and we are pleased to inform you that we have the remedies. In whatever form your cold may affect you there is a remedy in our store to help you.

by Arthur Brisbane  
To Terrify Terrorists  
Another Attempt to Kill  
For Gold Star Mothers  
Women Spend 53 Billions

Los Angeles, Calif.—The shooting of the Mexican president, his wife and another, none killed, fortunately, will mean drastic action in Mexico. No nation will tolerate, even in civilized times, a campaign for the control of government by murder. Back of the young band that fired the shots there stands in the shadow some murderous organization, relying on terror and using servile tools for its purpose.

Ortiz Rubio and the powerful Portes Gil, former president, now Rubio's secretary of the interior, will find a way to terrify the terrorists.

Before the would-be murderer shot him, Ortiz Rubio, in his brief inauguration address, had promised that all classes of Mexicans "should enjoy the privilege of being classed as men." Those familiar with conditions under which Mexico's lower classes have lived, and with the attitude toward them of the upper classes, will know what that means to the Mexican under dog.

Congress votes more than \$5,000,000 that "gold star" mothers may visit their sons' graves in France. Of 11,000 mothers entitled to go, 6,000 have expressed a desire to go. Many cannot go, because of duties at home. Others, perhaps, dread the sorrowful shock. To those that do not go, congress should pay in cash the pro rata amount that it would cost to send them, about \$1,000. No other course would be fair.

Texas has an "anti-chain store association" to drive and keep out chain stores owned outside the state. The governor and other high officials are said to indorse the association, which seeks to protect thousands of small merchants, driven to the wall by chain-store efficiency and economy.

Another attempted murder among our Latin-American friends. An attempt, fortunately a failure, is made on the life of Mello Vianna, vice president of Brazil. As in the recent Mexican outrage, the man attacked was making a political address and the would-be murderer was moved by political hatreds. Only harsh severity can meet such an assassination epidemic.

Richard Stewart, rug merchant of Warren, Ohio, is in jail. Judge Perry found him guilty of molesting a woman. Stewart offers an excuse as old as Adam: "The woman led me on." In jail Stewart refuses to eat. It would have been fortunate for Adam, and for us, but bad for the clothing business, had Adam likewise refused to eat.

Charles Evans Hughes' returns to the Supreme court as chief justice, at President Hoover's request. In him the people have a brilliantly able man, worthy to take Mr. Taft's place. And from Mr. Hughes' acceptance of the position you learn that honor and opportunity to be useful are more important than financial profit.

Mr. Hughes gives up a private law practice worth more than \$500,000 a year for the small salary and great opportunity of the Supreme bench.

Chicago's Retail Advertising Institute is told that American women spend every year fifty-three billion dollars.

A million is a great deal. A thousand millions is a very great deal. Fifty-three thousand millions spent by the women in this country is an extraordinary amount of money.

The rich, in this happy land, very happy for some, are richer than they ever were. The Treasury department tells you there were 496 Americans in 1928 with annual incomes above \$1,000,000. The total on which they paid income tax was one thousand and seventy-three millions.

And, as you know, this represents only a fraction of the really big incomes. There are men with incomes above one hundred millions each. Their money is in great corporations. The latter re-invest their earnings and hand stock dividends instead of cash to the big controlling stockholders. On such dividends, in accordance with Supreme court decision, the really rich men pay no income tax.

One man, with much more than a hundred millions income, paid, as shown in reports once published, only six millions income tax. Without the stock dividend device he would have paid forty millions at least. A lot of salary earners and professional men made up the difference.

Of the supermillionaires, twenty-four have more than five millions a year each. With all that money you would expect to hear of some remarkable and interesting things done, but money and imagination do not often go together. Imagination prevents accumulation.

For brains and ingenuity there are always openings and success. What is wanted is something that will give a decent living to any man or woman willing to do honest work. Even the average man has a right to live, or should have.

(©, 1930, by King Features Syndicate, Inc.)

## Scholastic Honor System

The honor system as applied to schools is a phase of student government whereby the students pledge themselves to handle their own affairs and be responsible for good deportment without the constant attendance of a professor. This is particularly true at examination time, when the students promise not to cheat, even though a professor is not in the room

## DORAN NEWS ITEMS

Kindly Leave News Items at Black's Store.

By Mrs. George Black.

Mrs. H. V. Nellans and sons spent Saturday afternoon at the home of Chas. Black.

Mrs. Bernard Black and Mrs. George Black made a business trip to Rochester Thursday.

Mr. and Mrs. Hiram Mollenhour were Sunday guests of Gus Mollenhour and family.

Mrs. Elmer Huffman and daughter, visited with Mr. and Mrs. Omar Igo of Mentone Thursday.

Mr. and Mrs. C. M. Tucker were callers at the home of Mrs. Nellie Tucker of Silver Lake Monday.

Mr. and Mrs. George Smith and children were Tuesday dinner guests of Mr. and Mrs. Lloyd Creakbaum.

Mr. and Mrs. Thomas Whetstone have moved to Mentone. Philip Whetstone has moved on the farm.

Mr. and Mrs. Lester Klouse and baby are spending a few weeks at the home of Mr. and Mrs. Horace Rickel.

Miss Edith Heighway of South Bend spent the week end with her parents, Mr. and Mrs. O. A. Heighway.

Mr. and Mrs. John Black returned to their home in Chicago after spending the week with his father, A. E. Black.

Mr. and Mrs. Chas. Black entertained at Sunday dinner Mr. and Mrs. George Black and Mr. and Mrs. Bernard Black.

Mr. and Mrs. George Creakbaum and daughter of Grand Rapids, Michigan are spending their vacation with his parents, Mr. and Mrs. Lloyd Creakbaum.

Mr. and Mrs. Chas. Petry entertained at Sunday dinner, Mr. and Mrs. Gaylord Petry of Elkhart, Mr. and Mrs. Lester Rogers and son of near Argos and Fern Petry.

Mr. and Mrs. C. M. Tucker, Mr. and Mrs. Floyd Tucker and daughter Mr. and Mrs. Mars Tucker and children, Mrs. Ora Tucker and children, and Mr. and Mrs. Max Smith and son of Mentone were Sunday dinner guests of Mrs. Nellie Tucker of Silver Lake.

The Ever-Faithful Home Economics Club of Franklin Township met in regular meeting at the home of Mrs. Marie Cook Wednesday. Roll call was called and each member responded with a recitation. After the business part of the meeting the time was enjoyed with games and contests with Mrs. Nora Tucker and Miss Ruth Petry winning prizes. Those present were: Fawn Tucker, Susie Tucker, Lena Igo, Bertha Barr, Grace Holderman, Sadie Black, Nora Tucker, Fro Tucker, Flora Petry, Ruth Petry, Pearl Smith, Alice Brugh and Marie Cook. Lovely refreshments were served by the hostess. Next meeting in March will be held at the home of Lena Igo.

## ORA TUCKER PAYS FINE OF \$47.30 FOR INTOXICATION.

Rochester, Ind., Feb. 5.—Ora Tucker, farmer living near Mentone, was assessed a fine of \$10 and cost amounting to \$47.30 by Justice of the Peace William Ewing after he had pleaded guilty to a charge of public intoxication. Tucker was found wandering on State Road 15 by Sheriff Ora Clark after farmers had called for him to take charge of a man whom they thought was demented. Tucker made arrangements to pay his fine.—Warsaw Times.

Mule at \$5.00 per quart and assessments at \$47.30 per throw, makes drinking quite an expensive pastime. We do not believe that the benefits derived are worth the price.

## Grand Canyon Divisions

The Grand canyon is more than 200 miles in length, divided into four divisions known as the Kaibab section, the Kanab section, the Uinkaret section and the Sheavwitz section.

## Purdue News Service.

### POULTRY DISEASE

#### MORE PREVALENT.

Information relative to the occurrence of bacillary white diarrhea, paralysis, and tumors in poultry, indicate that these diseases are becoming more prevalent in Indiana farm flocks. Bacillary white diarrhea or pullorum disease is responsible for most of the high death rate which occurs in young chicks, and paralysis and tumors cause serious loss in pullets and mature birds. In, 1920 the Veterinary Department of Purdue University received for post mortem examination only two chickens that had paralysis and eight that had tumors. There has been a steady increase in the numbers of birds from flocks in which these diseases are causing serious loss.

"Last year we received birds from 241 flocks, that showed lesions of paralysis and tumors on post mortem examination," said Dr. R. A. Craig, head of the veterinary department at Purdue in a recent address at the University.

"Unfortunately for the poultry industry, pullorum disease and paralysis may be transmitted thru the egg, and the tendency to develop tumors is inherited," he stated. "If we expect to prevent these diseases from spreading more rapidly in the future than they have in the past, it is necessary for poultrymen to use only breeding flocks, that are known to be free from these diseases, or those in which no cases of paralysis and tumors have occurred. This is an important disease control measure."

### HEALTH "STICKS"

#### TO CLEAN CHICKS.

"Clean chicks in clean houses on clean ground are already half grown" This was the conclusion of Stephen M. Wolford, Purdue Poultry Extensionman, stressing chick health before the poultry section of the recent Agricultural Conference at Purdue.

"Clean chicks are chicks free from the three troubles which may be transmitted through the medium of the egg", he elaborated. "Since no accurate means of identifying carriers of fowl paratyphoid has been devised, caution dictates the rejection of breeding flock known to be definitely affected. The remaining two heritable troubles—bacillary white diarrhea and fowl typhoid—can both be avoided by the thorough, conscientious and intelligent application of the agglutination test for bacillary white diarrhea, which identifies the adult carriers of both troubles.

Clean houses involve the removal of all particles of dirt, and thorough

scrubbing of the brooder house and equipment with boiling hot, lye water—one pound of household lye to each twenty gallons of boiling water.

"Clean land is the result of the purifying effect of sunshine, rain and frost alone, and ground should not be used for chicks until these factors have had at least a year to clean it after its use by adult stock or chicks, or its being fertilized with poultry manure."

This talk was one of the twenty centered around the problem of flock health, which formed the nucleus of the poultry department program.

### FARMERS WHO ADVERTISE SEED ADVISED TO TAG IT.

Farmers preparing for spring sales chemist and seed commissioner, that are advised by H. R. Kraybill, state when seed is advertised for sale by means of the public press, sale bills or other circulars, it must be tagged properly with officials state tags in order to comply with the Indiana Seed Law. The law provides exemption from the provisions of the seed law in cases where the grower sells and delivers the seed on his own premises provided he does not advertise it by means of the public press, circular, catalogue, etc.

This information is being broadcasted by the state seed commissioner who feels that perhaps there are farmers who think that only seed purchased from the dealer comes under the provisions of the seed law and who are not familiar with the fact that seed which is advertised by sale bills and in newspapers or farm papers must be tagged with officials Indiana seed tags.

There is a penalty attached to any violation of the seed law. Farmers who are in doubt about their particular case should write to H. R. Kraybill, State Seed Commissioner, Purdue University Agricultural Experiment Station, for information.

### Finding Repose

When a man finds not repose in himself it is vain for him to seek it elsewhere.—From the French.

### Life's Possibilities

What is past is past. There is a future left to all men, who have the virtue to repent and the energy to atone.—Bulwer-Lytton.

### Building Progress

Glass and aluminum skyscrapers are predicted for the near future. In other words, going after both light and lightness.—Pittsburgh Post-Gazette.

### World's Largest Rodent

The capybara is a South American rodent which sometimes reaches a weight of 150 pounds and which is the largest rodent in the world. It is found in many rivers of South America and lives on roots and shoots.

## RAPID GROWTH IN RAISING TURKEYS

### Fowls Utilize Areas of Other- wise Profitless Land.

The turkey industry has made a rapid growth in Idaho in recent years, says Pren Moore, extension poultry specialist with the University of Idaho college of agriculture. It has grown since 1922, when turkeys were rather insignificant in volume, until now it has become an important industry in point of volume. The bulk of the original stock was small and of poor quality. There was very little native stock at that time which was suitable for breeding purposes. There were a few breeders in the state who had been importing good breeding stock, but the general average was of inferior quality.

The increased volume soon attracted the large produce dealers, who began bidding for the business. Grades, conforming to those in general use throughout the country, were applied. Not until then did the growers realize the value of breeding to improve the quality of the stock. The few good local breeders were unable to supply the demand for better breeding stock. Breeding stock was imported on a large scale. Some of it was of high quality while much was inferior, but most of it was an improvement over the average of the native stock. Improvement was rapid, which developed a rapidly growing interest in turkey breeding as an enterprise.

Demand for better breeding stock led to a system of accreditation similar to that attaining such success in the poultry industry. The popularity of this accreditation work in turkey raising, says Mr. Moore, is apparent from the growing demand for the service.

### Clean Ground Essential for Turkey Success

Recent findings have shown that the organism which causes blackhead in turkeys lives in the soil. Consequently if turkeys are raised on contaminated soil they can hardly escape the disease. The danger will to a large extent be averted if a three-year rotation is followed.

Experimental findings have shown that the cecal worm found in chickens is a menace to the turkey. It is believed that if the young turkeys are affected with cecal worms the injury they do to the lining of the intestinal walls is sufficient to permit the entrance of blackhead organisms into the blood stream, thus infecting the bird with the incurable disease and the one most dreaded by turkey breeders. The remedy, therefore, is to

keep the young turkeys on clean ground and entirely separate from chickens.

\*\*\*\*\*

### Poultry Hints

\*\*\*\*\*

To get best results, chicks of no breed should be hatched after the first of May.

\*\*\*

If due attention is not paid to the vitamins in the ration, disappointments are in store.

\*\*\*

The late hatched chicks are subjected to many parasites and diseases which the earlier ones escape.

\*\*\*

Oyster shell, limestone or other lime-bearing material help to supply hens with the calcium they need.

\*\*\*

The summer egg production from the early maturing pullets is just as good as from the late maturing pullets.

\*\*\*

See that the house receives no moisture because of location, and make sure that lack of ventilation does not create moisture within.

\*\*\*

Thorough examination of the interior of the poultry house for mites and bedbugs might reveal legions of these unwelcome guests. If they are present, paint the roosts, roost supports, and rear wall with pure carbolineum.

\*\*\*

It is almost impossible to do a good job of culling if the farm flock has been improperly fed.

\*\*\*

Most of the heavier breeds will give better results if hatched previous to April 1. The chicks not only grow better but the pullets will start laying earlier in the fall.

\*\*\*

Experiments have proved that chickens can be kept in confinement throughout their lives, without restricting their growth or egg production.

\*\*\*

Tuberculosis in poultry can be definitely diagnosed by a post mortem or by the tuberculin test given by a veterinarian.

\*\*\*

Frequent culling of the slow-feathering and slow-growing birds during the range period makes the culling job easier when the chickens are housed.

\*\*\*

Photoelectric cells have been applied to an egg candling machine. It automatically selects the bad eggs and rejects them as they pass on a belt in front of the cell.

\*\*\*

### Drawing the Line

We know that the city housewife demands more and more service, and is less and less inclined to do kitchen work when she can get out of it. But when it is suggested that it will be necessary for the turkey-raiser to evolve a breed of birds with built-in dressing, we positively draw the line.—Farm Journal.

## HOW TO LIVE LONGER

By John Clarence Funk, A.M., Sc.D.

Director of Public Health Education,  
State of Pennsylvania

### Give Them Their Chance

RECENTLY a young boy was vaccinated against smallpox and was then proudly sent off to school for the first time. Satisfied that they had discharged their obligations toward their offspring the parents fondly awaited results. These promptly came in the form of school reports stating that "John was dull."

As a matter of fact, John was not dull. He was, however, badly undernourished and in addition had adenoids. With these conditions remedied the boy quickly reached the head of his class. This story has a moral.

Thousands of parents take the physical condition of their children for granted. Assuming that the absence of pain means positive health no investigation for possible latent troubles is made. This false attitude has annually sent out a tremendous number of young people physically handicapped for their school work.

It must be understood that pain is an indication of an acute or subacute condition. In many physical states needing urgent correction, it is all together absent.

Health departments, through rural inspections, are in some jurisdictions investigating the physical condition of the pre-school child. But for the most part this obligation, both in the country and the city districts, still rests with the parents alone.

Weak eyes, bad teeth and tonsils, undernourishment, defective hearing, impaired hearts and many other deficiencies do not manifest themselves through pain at all. Indeed, so clever are they at concealing their existence that an investigation by a physician is required to bring them to light.

Young school children deserve to start their school careers "at scratch." This advantage will not be theirs unless they are physically fit. Get them thoroughly examined for bodily defects. Give them their chance. They will need it.

### Take Time to Decide

Those who are quick in deciding are in danger of being mistaken.—Sophocles (496-406 B. C.). "Oedipus Tyrannus"

### Kilt Not Scotch, Latest

Scotland and England have been arguing as to the origin of the kilt, long believed to be distinctly a Scotch creation. The English have the best of the dispute at present by presenting proof that 200 years ago a Parkinson, an English tailor, while in camp with General Wade, was commissioned to make the first kilt. It then was called the "feilidh bag" to distinguish it from the belted plaid, which was made in one piece.

## The New Community Fire Truck.

Solicitors will soon call upon the farmers of this community soliciting funds to help pay the purchase price of the above new modern fire truck, built especially for the purpose of fighting fires in rural districts. We hope that every farmer within reaching distance from Mentone will avail himself of this opportunity to obtain real fire protection and contribute his just share toward the purchase price of this new equipment.

Most all up-to-date communities are equipping themselves with trucks of this kind, and if you will read the following letters and note the large amount of value in property that has been saved by this type of equipment, you will see that it is not a matter of whether you can afford it—but rather whether you can afford to do without this protection:

Here is a Letter From Our Neighbor, Bremen, Indiana.

Bremen Fire Department, Laroy Carothers, Chief.

Boyer Fire Apparatus Company,  
Logansport, Indiana.

It was just a year ago this month that you delivered our new six tank Boyer Reo Apparatus to us and we thought you might be interested in knowing the savings it has enabled our fire boys to make for the farmers in our vicinity. Besides the fires

we fought in town, we have made six country calls as follows:

Charles Tomlison—7½ miles from town. We were called late to this fire and the roof of the house had fallen in before the alarm was received. There was a total loss of the house, valued at \$2000; however all other buildings were saved of a total value of \$5000 and it is a cinch these buildings would have gone had our fire company not been called.

George Birk—8 miles from town. Lightning struck his barn which was a total loss valued at \$2000. All his other buildings were saved of a total value of \$10,000 and these other buildings were all located very close together and close to the barn.

Oscar Cline—1½ miles from town. Oil stove set brooder house on fire, saved buildings, but about 500 chicks were smothered and burned. Total value of buildings, \$4000.

Roy Franklin—4½ miles from town. Roof fire on house with loss of less than \$25.00. Value of house \$2000.

Elmer Laudeman—1½ miles from town. The railroad company had been burning ties and fire spread across wheat stubble field to straw stack, completely burning the stack, but we saved all buildings. Value of stack \$100.00. Value of buildings, nearly \$5000.

Horace Berg—1½ miles from town. Roof fire on house with a loss of \$50. Saved house and all other buildings with a value of \$8000.

(Continued on Next Page)

## NEW COMMUNITY FIRE TRUCK.

(Continued From First Page)

We have had an unusually small numbers of fires throughout our district this year, but even so, we are proud of our Boyer Apparatus and the work that it enables us to accomplish. The real big thing that this apparatus does for us is to create a wonderful feeling between the farmers and our town. Farmers within a radius of eight miles of Bremen sure do speak highly of the Bremen Fire Department and they come to Bremen to do their trading.

Your Friends,  
Larcy Carothers, Chief.  
Wm. C. Wolfe, Secretary.  
H. H. Marburger, Captain.  
E. F. Goss, Driver.

## SAVES HIS BUILDINGS.

Bremen, Ind., May 8, 1928  
Bremen Fire Department:

I cannot express in words my gratitude for the wonderful work done by the chemical truck on March 6, when our straw stack beside the barn caught fire. Without the aid of the truck, the barn and all the other buildings would have burned.

Yours Truly,  
Elmer H. Laudeman.

## ANOTHER SAVING OF \$1500.00

Adrain, Mich. March 31, 1925.  
Boyer Fire Apparatus Company,  
Logansport, Indiana.

I want to praise the new fire truck that the people sold to our community, also Mr. H. A. Bradish your representative who called on me for my subscription.

The new rural fire truck had been in town only a few hours when my tenant house was on fire. My daughter directed the firemen to the house where they arrived twelve minutes later. This was a seven and one-half mile run, of which two miles of the distance was on a dirt road in poor condition for speed.

The fire truck arrived with all apparatus in proper condition for business and within a few minutes the fire was under control.

I only carried \$1500.00 insurance on this house with a valuation of \$3,000.00. The cost of putting this house back the same as it was before the fire was \$1004.54 a saving to me of \$1500.00. If it had not been for the fire truck my house would have burned to the ground.

In my judgment this trial demonstrates the wisdom of the promoters of modern fire fighting equipment for the farmers. After having this experience I have doubled my subscription to the fire fighting enterprise because I believe it is one of the best investments that a community can make.

All our farmers have made investments in telephones, in buildings and good roads and now I consider it good judgment to make a comparatively small investment in modern fire protection, involving the use of the roads and telephones for the protection of property. No one knows who may be in need of this service next, and I feel it is a protection we cannot afford to ignore.

Very truly yours,  
L. M. Harwood.

The foregoing are only a few of the many letters received by the Boyer Company praising their fire fighting equipment, and should convince most any one that the small investment required to get protection is nothing compared to the great savings to be made by any rural community.

Now please think this matter over carefully and when the solicitor calls be prepared to pledge your just share toward the purchase of this equipment.

## TWO VERY OLD BIBLES.

The Oldest One is Owned by Carlin Myers of This Village and Was Printed in 1730.

In a recent issue of the Warsaw Times there appeared an article describing an old bible owned by Mrs. Grace Brown, of Winona Lake. It was printed at Edinburgh, Scotland, 1766.

However our townsman Carlin Myers owns a German bible that beats that one by 36 years. This bible is 11½ x 18 x 5¼, heavy board backs covered with leather and ornamented with brass clasps. It was printed in Germany in 1730, and is in a splendid state of preservation, being just the same as it was when first printed with exception of the natural wear. It was brought from Germany in 1818 by Mr. Myers' grandfather, Mathew Myers, who formerly resided on a farm 2 miles north of Syracuse. The printing in this volume is certainly a work of art, and it is very evident that the man who printed it copied after the famous Gutenberg bible as near as possible. It looks exactly like all the pictures that we have seen of the Gutenberg edition—and one of which was recently bought by a New York collector at the big price of \$500,000.00.

While this bible, would possibly also be valued at a big sum if in the hands of the right party, Myers says that he will sell it for considerably less than a Gutenberg would cost.

## The Glory Of Niagara in Winter.

No one who has never seen the spectacle of millions of tons of sky-blue water plunging in majestic grandeur through a glistening frame of ice and snowy spray, can form a true conception of Niagara Falls when folded in its wintry gown of fairy-like splendor.

To see Niagara in Winter is to know it is in its most spectacular phase of enchantment.

The world-famed cataract, at any time, is a sight worth traveling across the country to behold, but when the hand of King Winter has touched it with the glory of sparkling frost and ice, it becomes Nature's Masterpiece—a picture of beauty-impression and lasting as Time.

Those who contemplate a visit to the Falls at this season of the year are fortunate in the opportune Low Fare Excursion extending over the Washington's Birthday week-end, presented by the Nickel Plate Road, by which one may spend a day or two in this attractive region, with a minimum loss of time from business and work. Excursion tickets will be good going on February 21st and 22nd.

## Purdue News Service.

### 148,000 WEED SEEDS FOUND IN POUND OF "GOOD" CLOVER SEED.

Recently a striking demonstration of the danger of sowing nontested clover seed has been called to the attention of the State Seed Commissioner. A large company in this state submitted a sample of clover seed representing 33 bushels offered for sale by a farmer. The sample was analyzed by the Purdue Experiment Station Seed Laboratory and found to contain only 70.9 per cent of clover seed and over 27 per cent of weed seeds most of which were noxious. The sample contained over 148,000 noxious weed seed per pound. In sowing this seed at the rate of 8 pounds per acre over one million weed seeds would be sown per acre. The seed dealer reports that in order to clean this seed and put it in saleable condition there would be a loss of fully 50 per cent in weight.

The seed dealer asked the grower of the seed where he bought the supply from which this seed was raised. The farmer replied that he bought it from one of his neighbors. He said that his neighbor told him that he had a nice lot of clover and that he really did not pay any attention to it when he sowed it.

The crop of clover seed from Indiana last year was large and there will doubtless be many bushels of seed similar to this seed as it comes from the huller.

Farmers are urged to sow only tested seed. They should insist that the seed be tagged with Indiana state tags properly filled out. This tag will show the percentage of purity, germination and the number of noxious weed seed per pound.

The last year was a particularly favorable year for the development of a very serious weed, dodder. If untested and unlabeled seed is sown there is a great risk of infesting the field with this dangerous weed. Dodder is a twining parasite that frequently ruins the entire crop of clover or alfalfa for hay and seed purposes.

### GOOD MANAGEMENT BRINGS FARMER GOOD PROFITS.

C. A. Madill of Delaware county has kept detailed farm cost accounts in cooperation with Purdue University for four years. At the recent Agricultural Conference at Purdue he summarized the results of these records showing in detail the operating costs and profits over this four year period.

This farm is successful and most of the productive enterprises were carried on at a profit each year. In 1928-29 the cost of producing corn including all charges for labor, seed, fertilizer, use of land, interest, etc.,

was 42 cents per bushel. One-half hour of man labor was required on the average to produce a bushel of corn and the corn enterprise yielded a net profit for the year of \$1,536.95. Oats were produced at a cost of 42 cents per bushel and hogs at \$9.15 per hundred weight.

One of the interesting features of the record was the very low cost of horse power and machinery. The cost per hour of horse labor was eight cents while the average as shown by studies in Tippecanoe county is almost 12 cents per hour. Horse labor costs were kept low principally by the extensive use of grass and pasture. This resulted in low feed cost and avoided heavy labor charges in caring for the horse.

B. A. Madill, the elder member of the partnership, explained how these low costs were obtained by describing in detail the methods of farm operation. He emphasized particularly the extensive use of grass particularly in rotation in their system of farming in order to cut down maintenance costs and to obtain cheap gains. With both hogs and cattle extensive use of grass is made.

Dr. E. C. Young of the Department of Farm Management made a brief analysis of the farm business and pointed out how it illustrated the principle of sound business organization which is common to successful farms. He emphasized the fact that

no farm could be used as a model with any very wide application. Every farm must be operated under differing conditions of soil, topography, markets, finances, labor supply and management. The general principles of successful farm operation have a wide application.

### It's Just as Hard

If we can't change the world, how about trying to change ourselves?—Forbes Magazine.

### China in History

The history of China goes back at least 4,000 years. The Middle ages knew it as the Empire of Cathay, or the Land of the Ceres. The first European accounts of China are those given by Marco Polo, about 1260 A. D.

### French Settlers in Canada

The French Canadians are the descendants of French emigrants, who left their country between 1640 and 1690. After the latter date further immigration was forbidden by Louis XIV.

### Electricity From Rug

The bureau of standards says that electricity generated by walking on a heavy rug is a common experience in winter, when the heated air indoors is very dry. There is no effective way of preventing such charges except increasing the humidity of the air. The electrical energy is small.

## CALF FATTENING TESTS CONDENSED

### Colorado Station Outlines Results of Experiments.

Results of calf-feeding experiments conducted by the Colorado Agricultural college experiment station during 1928 and 1929 are summarized and discussed in a new bulletin recently published at the college.

Stockmen who are feeding calves this winter will find this leaflet, Press Bulletin 70, entitled, "Feedlot Rations for Fattening Calves," of much value, it is believed. Copies will be sent free to anyone interested.

The report on the 1929 test and the summary of the results of two years' experiments are explained by E. J. Maynard, associate animal husbandman, and H. B. Osland, assistant professor of animal husbandry at the college.

Outstanding results obtained in the two years are summarized in the bulletin as follows:

1. A standard beet by-product ration of wet beet pulp, barley, cotton cake and alfalfa proved cheapest and most efficient for fattening calves in beet-growing areas.
2. The relative efficiency of wet beet pulp siloed at the factory and pressed beet pulp siloed at the farm will depend largely on the comparative length of time the pulp is stored.
3. Trench silos are practically as efficient and much cheaper than straw silos for storing pressed pulp.
4. Corn silage can be used to supplement wet beet pulp in a beet by-product ration for fattening calves; 63 pounds of corn silage fed daily reduced the pulp requirement by nearly one-half.
5. Dried sugar-beet tops showed a feed replacement value of \$6.41 per ton of tops fed.
6. Steer calves made cheaper and heavier gains than heifer calves.

### Practical Treatment Is Urged for Mangy Horse

A horse that has mange may be treated by using a solution made by boiling one and one-half ounces of tobacco in a quart of water. Sponge or brush the horse, using this liquid, and repeat in ten to fourteen days.

It will be necessary to clean the harness, collars, curry combs, brushes, etc., that come in contact with the horse. You can disinfect these articles by using any of the common disinfectants such as lime sulphur or nicotine sulphate or any of the well-known arsenical dips.

Whitewash the barn using one-fourth pound of chloride lime to a gal-

lon of water. It is desirable to dip the harness, brushes, etc., rather than to spray them, as the dipping is more sure to kill the insects.

### Ground Feed for Stock Found Not Profitable

A safe rule as to feed grinding is to grind medium fine all grain for dairy cattle and all hard grain for the other live stock. Extremely fine grinding for cattle, hogs or sheep does not pay for the extra power required, according to tests at Purdue university. Where dockage is used as part of the ration, this should be ground fine enough to destroy all weed seeds. Tests at several experiment stations indicate that so far as feeding value is concerned, grinding dry forage hardly pays, but that there is considerable saving in wasted material, in handling, and in hauling out the manure.

### Live Stock Facts

Wean fall pigs when about eight weeks old.

Sows should take plenty of exercise. Grain should be scattered over the ground to encourage exercising.

A convenient water supply is an essential feature of good live stock management in winter as well as in summer.

In addition to grain the brood sows should be supplied with as much good quality alfalfa or clover hay as they will consume.

Potatoes are somewhat unpalatable, but they can be successfully fed to sheep, cattle and horses in the place of corn silage.

Farmers everywhere are giving greater attention to lowering cost production and developing hogs that most often are market toppers.

In feeding potatoes to hogs it is necessary to cook or steam them, seasoning with a little salt. They more nearly meet the requirements for feeding hogs when used in this way than they do when fed to other classes of live stock.

Cars for shipping cattle in extremely cold weather should be deeply bedded and the sides lined with heavy paper to a height which will prevent strong air currents from striking the animals directly.

#### Test of Will Power

You don't need lessons by mail to develop will power. Just practice passing a crowd without stopping to investigate.—San Francisco Chronicle.

# This Week

by Arthur Brisbane  
Mr. Hughes, Chief Justice  
Henry Ford's New Plan  
No Bolshevism Needed  
A Real Stigma

Mr. Hughes is now chief justice and the people have in their service a man of great ability, profound knowledge of the law and highest integrity. They know that Mr. Hughes, for the sake of public service, exchanges a private law practice worth \$500,000 a year for the small wages paid by the richest nation to its highest judges.

Henry Ford may spend \$100,000,000 establishing schools that will enable students to "fit into life" when they come out at eighteen years of age. He says: "The reason we have so much crime and racketeering is because schools do not teach our young men how to fit in the world. Racketeering is nothing but a revolt against the present improper, ineffectual system of teaching."

Schools at present are better than they were 50 years ago before racketeering became a science. Students should all learn to use their hands, particularly those not well adapted to using their heads. It would be waste of time for men of the type of Voltaire, Milton, Mollere or Beethoven to learn a trade, but they are scarce.

Mr. Ford should modify his resolution to "devote the rest of his life to educational undertakings." Part of his effort should produce tractors of the caterpillar type—plenty of power with the traction "track" fully inclosed, protected from dust.

In one column you read about a "mob" of 1,200 idle men, fighting police in Cleveland, twenty in the mob injured, officers hurt.

In another column you find comfort, perhaps, in news from Washington that our national banks have resources of over twenty-nine billions of dollars.

Seven thousand four hundred and eight institutions have on deposit more than twenty-two billions.

A country so rich ought not to have so many men who are willing to work and idle.

You are told that the mob of rioting unemployed men in Cleveland had been influenced by "Bolshevik propaganda."

It is very easy to say "Bolshevism." But when a man is out of work, worried and perhaps hungry, he needs no help from Lenin to make him dangerously dissatisfied.

Men adrift on a raft in midocean that had never heard of Lenin or Bolshevism have killed and eaten each other.

Five states of the South, highest in illiteracy, are conducting educational campaigns to reduce "the stigma."

Census takers list illiterates.

Iowa has only 1.1 percentage of illiterates, lowest in the nation. Nebraska came first until 1920, and is striving to regain the championship.

However, persuading or forcing hard-working people to study at night when they are tired out, and learn enough about their A B C's to remove the illiteracy stigma is not doing much.

To be able to read and write when you lack leisure to do either, and have no access to books worth while, is no help.

As well teach a man 5,000 miles from Egypt to read hieroglyphics on Egyptian monuments.

Hard, under-paid labor and lack of work are a "stigma" worse than illiteracy.

The world still loves titles. In a Los Angeles lawsuit about money collected for a newly invented religious "cult" you meet a mild-looking gentleman called "The Four Winds of the Whirlwinds." He wrote down with his typewriter 50,000 pages dictated by angels to the priestesses of the "Great Eleven Cult."

"Concords of stars led the priestesses to various locations, and there the angels did their dictating."

Men and women gave tens of thousands of dollars in return for nonsense of this kind, which proves that the human race is largely foolish.

Ogden L. Mills, assistant secretary of the United States treasury, in a few words convinces you that this country has genuine prosperity if prosperity consists in getting more of life's good things than anybody else gets.

The United States has only 7 per cent of the world's population and yet, says Mr. Mills, "that 7 per cent consumes approximately 48 per cent of the world's coffee, 53 per cent of the tin, 56 per cent of the crude rubber, 21 per cent of the sugar, 72 per cent of the raw silk, 36 per cent of the coal, 42 per cent of the pig iron, 47 per cent of the copper and 69 per cent of the crude petroleum."

"Out of nearly 32,000,000 automobiles in the world on January 1, 1929, more than 24,000,000 were owned in the United States."

We certainly get our share. Perhaps the World court will tell us we get too much.

(©, 1930, by King Features Syndicate, Inc.)

HARLEY D. PEARSON  
ANNOUNCES CANDIDACY

Harley D. Pearson who was born and reared in Prairie Township, Kosciusko County and whose residence is Huffman Lake in Prairie Township announces in this issue of Community Farm News that he will be a candidate for Sheriff on the Republican ticket in the May Primary.

At the present time, Mr. Pearson is an officer in the State Highway

Police Department, his territory being State Road 30 between Plymouth and Fort Wayne, and he has made an enviable record in the State Police Department. Mr. Pearson has been given numerous special assignments in investigating criminal cases which have taken him all over the Northern part of the State of Indiana and adjoining States and this experience gives him unusual qualification for the position of Sheriff. He is a fearless and conscientious officer.

## Musical Name

The correct name of the little wooden musical instrument commonly called a sweet potato is ocarina.

## Marvelous Work of New Konjola Medicine Told

Shafer & Goodwin Drug Store To  
Introduce Advanced Remedy For  
First Time In Mentone.

If you were told that one single medicine put hundreds of men and women back to work in Chicago, Philadelphia and other large cities after they had been idle for months with health troubles, it would sound

G. H. MOSBY

Discoverer of Konjola

impossible, wouldn't it? And that countless people were completely relieved of rheumatism and neuritis, and that they were able to walk again, without cane or crutches, and that this same medicine restored health to men and women who had suffered with stomach and kidney troubles for years. That complete relief had come in cases of misery where health resorts, expensive treatments and medicine upon medicine had failed—indeed it seems impossible! Yet, it is all true, and the medicine that has done all these things is the new Konjola, which is being introduced, starting today at the Shafer & Goodwin Drug Store, this city.

Wherever introduced, this Konjola is vastly different and more effective in thousands of cases of ill-health than any previously known medicine. It is a remarkable liquid compound for the following well-known troubles.

**RHEUMATISM:** Especially severe cases, where pains are intense, muscles swollen joints stiff and rigid. In the milder cases of this disease, Konjola relieves almost at once, and this medicine brings the same results to the neuritis victim that it does for the rheumatic sufferers.

**STOMACH, LIVER, KIDNEYS and**

**BOWEL TROUBLES:** Nearly all forms of misery that arise from these unhealthy organs have been so quickly relieved by Konjola that men and women sufferers everywhere were surprised. It is the action of this medicine on the organs of the inner-system that removes toxic poisons from the system and brings quick relief in so many cases. The secret of this Konjola is the way it acts on the important functional organs of the body namely: the stomach, liver, kidneys and bowels. So many diseases and long standing disorders of these organs were so completely conquered and entirely banished by this new compound that thousands of people in larger cities were able to give up taking medicine for time to come.

After the great accomplishments and wonderful work of Konjola in other sections, it is declared that this medicine is what hundreds of sufferers in Mentone and vicinity have long needed to actually reach their cases, and preparations are being made to introduce Konjola for the first time at the Shafer & Goodwin Drug Store, where this medicine will be sold and explained to the public daily.

### MENTONE NEWS ITEMS

Jean Burns is on the sick list this week.

Sam Mentzer is reported not quite so well this week.

George Clark, and Neuell Teeter spent Sunday and Monday in Chicago.

Mr. and Mrs. Lee Blue and children spent Sunday with Mr. and Mrs. James Blue.

Mr. and Mrs. Don Ernsberger were Sunday evening guests of Mr. and Mrs. F. B. Davison.

Mr. and Mrs. Conda Walburn spent Sunday in Warsaw the guests of Mr. and Mrs. Seth Taylor.

Miles Manwaring and Jennings Carter who are attending school at Bloomington were guests over Sunday of their parents.

Mrs. Roy Maxwell spent the week end with her son William at Bloomington. She will also visit relatives at Indianapolis on her return home.

Mr. and Mrs. G. Harry Oram and sons of Warsaw and Mr. and Mrs. I. F. Snyder were Sunday evening guests of Mr. and Mrs. D. L. Bunner.

Mr. and Mrs. D. Shoeman and family of Rochester and Mr. and Mrs. Alonzo Blue and son Jack were Sunday guests of Mr. and Mrs. Lon Blue.

Mr. and Mrs. F. R. Burns spent Monday evening in Bourbon where they were the guest of Mr. Burn's mother, who is reported to be quite sick.

Roy Adamson and family took Sunday dinner with Mrs. Mahala Meredith.

Mr. and Mrs. Harold Henderson and son Richard of Sturgis Michigan were Sunday guests of Mr. and Mrs. H. C. Thompson.

Mrs. John Wissert spent a few days last week at South Bend with her son Charles and wife, and little grandson, John David.

### CLUB NOTICE.

"Rugs" will be the subject of the lesson at the "Home Economics" Club meeting with Mrs. Goldie Mollenhour Tuesday p. m. February 25th.

Mrs. Minnie Busenburg will give the story of Oriental Rug making, and other club members will demonstrate hooked, crocheted, and braided rugs.

Response to roll call will be quotations from favorite poems. Members are requested to bring sewing equipment, some carpet rags cut about one half inch wide, and large crochet hooks. Meeting time, 2 o'clock p.m.

### ENTERS TOURO INFIRMARY.

In a letter received by Mr. and Mrs. L. P. Jefferies from Mrs. M. G. Yocum last week, we learn that after the Yocum party arrived in New Orleans, that the doctors condition was such that it was deemed best that he enter a hospital. It seems that there developed a gangrenous condition of the great toe of his right foot and at first it was thought that it was going to be a very serious case.

We are pleased to note in a letter received a few days later that the doctor is getting along nicely and that his trouble is not as serious as it first appeared. But as an ailment of this kind is always slow in yielding it will be some time before the doctor will be able to return to his practice.

# NEW FARM ENGINE HAS A "BUILT-IN" HEATER FOR WATER

## Running of Engine Furnishes Water for Washing Milking Utensils.

A gasoline engine with a "built-in" heater that heats water for washing the milker while it runs the milking machine or performs other tasks, is a new development in dairy farming. The engine differs from the usual type of farm engine in that it is patterned after the modern automobile engine, according to the De Laval Bureau of Dairying. Extremely simple in construction, the engine is about as fool-proof as a piece of mechanism can be, and capable of being run by anyone without the slightest mechanical knowledge. An efficient magneto delivers a hot flaming spark at all speeds, a carburetor of novel design makes for starting ease in any weather, and an automatic governor control makes attention or manipulation on the part of the operator almost unnecessary.

### Water Heater Is Built In.

But the unique feature of this engine, and one sure to be appreciated by the man who uses the milking machine, is the water heater built right into the engine. This consists of a four and a half-gallon tank which is connected to the cylinder water jacket of the engine. When the engine is being run, the water used to cool the

Farm housewife drawing water from built-in water heater in new type of farm engine.

engine circulates through and around the water jacket and heater tank and becomes heated to a temperature high enough for use in washing the milker or other dairy utensils. This takes place without mechanical assistance, and the result of thermo-syphonic action—warmest water rising to the top—the very same principle used in auto radiators. A convenient drain cock at

the bottom of the water heater enables the water to be easily drawn into a pail.

The economy and convenience of this water heater will appeal greatly to every dairy farmer, according to the De Laval Bureau. It makes for cleaner milk because it makes easy the cleaning of the milking equipment after each milking. The fact that there is a sufficient supply of hot water on hand for use immediately after milking also saves labor by reducing the time required to thoroughly wash the milker. The bother and expense of heating water on the kitchen stove or some other place is eliminated, and the water has no chance to cool off because it does not have to be carried far, the engine necessarily being located close to where the milking is done. And all this—and this is probably the best feature of the heater—is accomplished without any added expense because the water is automatically heated during the period in which the engine runs the milking machine.

### Has Other Uses, Too.

After it has been used for milking, the engine can be run to operate the cream separator, the churn, the farm lighting plant or any other equipment coming within power range. Tests have shown that the operation of the engine is so smooth and its governor control so definite that when used to drive a lighting plant not the slightest flicker is noticeable.

## TRACE BIG CREAM LOSS TO SEPARATOR

Practically any farmer can have his separator tested by merely saving the skim milk, adding the bowl flushings to it, and having the can of skim milk re-skimmed with a new, high-class separator of known dependability. In order to emphasize the universal necessity of "checking up" on every kind of separator, over 1,000 public demonstrations were made during the past three years by De Laval-trained dairymen. Before audiences totaling 100,000 farmers, the skim milk from some cream separator in use in the community was re-skimmed with a new, dependable machine. The cream recovered in this manner was weighed and tested and a check obtained for the amount of butterfat recovered from the skim milk. Last year, in 523 tests, an average of 9.2 gallons of skim milk was re-skimmed at each test. An average of 3.6 pounds of cream was recovered, worth 21.8 cents at prevailing prices. This means an average loss of over \$79.00 per year for all the separators from which skim milk was obtained.

### 10 Cents a Fish

The government pays a bounty of 10 cents for each fish caught of any species which preys upon salmon in certain districts of Alaska.

## Analyzing ...YOU...

With the New Science of Syllabics  
By C. J. COFFMAN  
Dean of All the Enumerators

### Blanche

"White was her skin and fair to look upon," must have meant you.

Graceful Shoulders of Blanche.

or the dream army. You certainly do give the impression of an army, when you put forth the strength of your dignity.

Tall and graceful, with beautifully molded shoulders, almost soldierly in aspect and carriage, you will find that dignity is your strongest asset. Some of the ancient syllabics formed of the letters in your name indicate the word hand. When you do choose to help anyone, you can do so with a mighty hand.

Access to important people, by way of your dignity, ought to be quite feasible to you.

A peculiar weakness which I am sure you will overcome is a sort of blankness which comes over you in the attempt to be dignified. You must avoid any tendency toward a "cold, fishy stare," or any inclination to freeze up the other person, who may be inferior to you.

I am sure you will see the need of being gracious, Blanche, and will know how to do this without losing any of the value of your dignity.

Taking the separate letters of your name, the B indicates tactfulness and diplomacy; the L shows expressiveness and ability to handle a crowd; the A gives you prominence and leadership; the N develops liveliness and the ability to manage long journeys; the C finds a commercial value in your power to express; H inclines to successful management of money; while the E broadens your view of the world and its society.

Blanche Bates, a great actress in her time, and Blanche Sweet of more modern attainment, exemplify these things.

(© 1930, Western Newspaper Union.)

### Geographical Distances

The difference in the distance around the earth at the equator and the distance going around through the poles is 42 miles. The equatorial circumference of the earth is 24,906 miles; the meridional circumference 24,854 miles.

## PROFIT TO FARMER IN COW TEST WORK

### Many Benefits to Owner of Dairy Herd From Mem- bership in Association.

The easiest way known for a farm family to make from 25 per cent to 50 per cent more profit on the average dairy herd, according to the De Laval Bureau of Dairying, is to join a cow testing association. These prosperity-building organizations of local dairy farmers, of which there are more than 1,000 in 40 states, have the backing, co-operation and endorsement of the owners of 414,891 cows, every state college of agriculture and the U. S. Department of Agriculture. In these organizations every member is visited every month by the cow tester, who tabulates the month's milk yield, tests the milk and figures out the monthly butterfat production of each cow, works out balanced rations for the herd, tests the skim milk from the cream separator to see that the machine is not losing butterfat, etc.

Every dollar invested by the dairy farmer in cow test association work usually returns from 15 to 25 times more profit than money invested in the soundest bonds on the market, states the De Laval Bureau. Directly and indirectly the benefits derived from joining a cow testing organization, the practical help and assistance and inspiration they provide makes the small yearly cost of being a member seem a mere trifle. A typical story pointing out one of the benefits of belonging to such an association is found in an item in the monthly report to the Iowa Agricultural college made by Harold Strom, tester for the Montgomery-Mills (Iowa) association.

The cream separator of one of his members broke down one day, so he took the milk over to a neighbor's to have the cream separated. To his surprise he found that the machine left 24 of 1 per cent fat in the skim milk. The owner of this separator had produced close to 9,000 pounds of skim milk during the month; therefore, he must have lost in the neighborhood of 20 pounds of butterfat worth nearly \$10. How much better off that neighbor would have been had he spent the \$10 which he lost in a single month from an inefficient separator, for joining a cow testing association which would check the efficiency of his separator every month!

There are an untold number of poorly constructed and badly worn separators on farms today that are "short-changing" their owners every time they are used. An effective method resorted to by some farmers to check the efficiency of their separators is to have five gallons from their separator reskimmed in a new separator of known standard quality. Like the neighbor in the above story, quite a lot of them are finding that they have been feeding their stock on skim milk that is entirely too rich for their pocketbooks. Responsible concerns are glad to provide the facilities whereby

the farmer may make a test of his separator and to furnish information on how a cow testing association can be organized in a community.

## HOW TO LIVE LONGER

By John Clarence Funk, A. M., Sc. D.

Director of Public Health Education,  
State of Pennsylvania

### Co-Operate

THESE days one hears so much about the word co-operate that it has almost lost its significance. Nevertheless, when it is applied to matters of health it is not only an apt term but an absolutely necessary one as well.

The present-day emphasis on health in magazines, newspapers, moving pictures and over the radio is unprecedented. In addition, a continual flow of information and official supervision can be traced to the private, municipal, state and federal health agencies; not to mention the valuable work which is constantly being accomplished by the insurance companies. It is unmistakably a sign of the times, and a most gratifying one.

Unfortunately, however, there is a tendency on the part of thousands of people to conclude that with so many people interested in the other fellow's welfare that little, if anything, need be done toward that end by the fellow himself.

Even after the establishment of adequate water and milk control, the development of proper sewage facilities and efficient communicable disease regulation, the biggest job in health remains for the individual himself to do.

Health departments and officials can eloquently and even vigorously suggest that one needs sufficient sleep, all the fresh air he can get, a proper amount of wholesome food and daily exercise. But then they have gone as far as they can go. As for the individual, it is strictly a "take it or leave it" proposition.

"Take it" and live long! "Leave it" and live less! Which seems to indicate that co-operation pays. It's up to you!

(© 1929, Western Newspaper Union.)

### Tip to the Weary

A big employer thinks his men work better if they have rest pauses at different periods of the day. Exhaustive and painful researches also show that in every group there are some who would rest better if they did some work first.—Detroit News.

### Expensive Costumes

It is said that the costumes worn by actors in the Passion play at Oberammergau are made without regard for expense. One worn by Pontius Pilate was reported to have been made of material especially woven in Constantinople which cost 800 marks a yard.

## Where Washington Worshipped

Christ church in Alexandria, Va., where George Washington was a vestryman. In his boyhood he attended the rural church at Pohick.

## Superb Courage of Washington

When Washington took command of the New England troops besieging Boston he assumed responsibility for more men under arms than he had ever seen before. The numbers were embarrassing not only as a problem of direction but as one of organization. He owed his appointment to two things, one the necessity of overcoming the colonial jealousies in New England and the other of bringing the South definitely in with the North. Principally for the second reason John Adams opposed the appointment of John Hancock as chief in command and procured the appointment of Colonel Washington.

Probably at no time was the professional soldier's contempt for untrained citizens in arms, for trained bands, militia, and an armed rabble greater than it was before Concord and Bunker Hill in New England, but the attack on the hill taught respect for the Colonials behind earthworks and in entrenchments. However, it went no farther than that.

In spite of the inherent defects of the troop organization and supply the New Englanders had done their work well. Their chief, Artemas Ward, and his associates, Heath, Knox, Arnold, Stark, etc., may not have been skilled soldiers, but they were determined and brave, and devotion never reached a

higher level of courage than it did in such men as Warren and Prescott. The 17,000 Colonial militiamen whom Colonel Washington found about Boston had taught the British professional two costly lessons. Distinguished British generals with a competent force were besieged and uncertain both as to what to do and how to do it.

### Knew British Weakness.

Several things dictated Washington's subsequent military course. First was his own physical and moral courage. That was his best military equipment. It was unhesitating and unfaltering. Second probably, was his experience with British regular troops. He had seen them lose their discipline under terror. It was not a proper indictment of Braddock's regulars that they could not fight the French and Indians as the Virginia riflemen could fight them. The disaster was that they would not obey orders. The third was his distrust of minute men, militia, and of undisciplined riflemen.

It is true that men of that type won the principal American successes, as at Oriskany, Bennington, Saratoga, King's Mountain, and Cowpens, but it was Washington's army which kept the pressure on the British points of concentration.

It was Washington's distinctive characteristic that he would attack. That quality was developed in him as if he had the experience, the genius, and the resources of any one of the great generals of history. He had two plans to throw the British out of Boston.

Both were vetoed by his council. Both were amazingly audacious. Both may have been very foolish. One was to attack across the ice if it became solid enough to permit it. The other was to attack in rowboats. It is one thing for an untrained general and an untrained command to resist behind cover, but only a man with Washington's courage would have seriously considered assaulting a fortified city supported by a fleet and held by disciplined troops.

### His Greatest Exploit.

When he attacked at Trenton his army had been shattered by its experiences at Brooklyn Heights, by its narrow escape from the easy-going Howe, by its retreat across New Jersey, by losses in battle, by desertions, and by the defection of the surrounding countryside.

It is true that something had to be done to revive the expiring flame of American resolution and courage, but here was an exploit of pure determination and serene heroism which took the fragment of a beaten army across the Delaware to risk an adventure which might have meant the end.

When Howe moved out of New York on the misguided campaign which took Philadelphia at the sacrifice of Burgoyne, Washington placed himself between the British and the capital. He was defeated at Brandywine, but in spite of that he later attacked at Germantown and nearly won. It has been said that his plan of action was too good, that it required movements his officers and men were unable to execute. This attack was regarded as another audacity proving that Washington did not know when he was licked and consequently could not be. The battle of Germantown, although lost, had its part, along with Saratoga, in convincing France that in supporting the Americans it might pick or make the winner.

### Glorious Victories.

When Howe withdrew from Philadelphia to return to New York, Washington undertook to harass and, if possible, intercept the movement, and at Monmouth he again attacked an enemy which was not hunting trouble at that time or place.

The taking of Stony Point by light infantry under General Wayne was an example of military maneuver obviously attractive to the character of Washington as a soldier. It was without powder, and the men who climbed the bluff in the night knew that the nearest officer would kill anyone who fired a shot. They had nothing but their bayonets. Again, at the taking of redoubts No. 9 and No. 10 at Yorktown, the French the one, the American light infantry the other, there was no powder.

At every opportunity Washington took the aggressive with courage and confidence which disregarded cautious consideration of what he had to hit and of what he had to hit with. When he took command before Boston he had many military lessons of generalship to learn from experience, but he did not have to acquire courage. That was in his stout heart, and it was the quality which made the Declaration of Independence good.

## SEEN AT TWILIGHT

From whatever position it is viewed, or in what light, the Washington monument is noble in its simple magnificence.

### First Birthday Celebration

George Washington's birthday first was celebrated as a patriotic holiday at Newport, R. I., in 1781, 18 years before he died. Washington was present at some of the most notable of the early holiday occasions in honor of his birthday.

He attended a gigantic patriotic ball in his honor at Philadelphia on February 22, 1792. His birthday was celebrated each year from then on but the greatest of all the celebrations took place in New York in 1798.

Lenity will operate with greater force, in some instances, than rigor. It is therefore my first wish to have my whole conduct distinguished by it.—Washington.

### Washington's Flag

The flag of General Washington's bodyguard, which was lost in 1871 and found about two years ago, has been restored to its original condition and is now displayed with other relics of Washington in the local Masonic temple in Alexandria, Va.

### Nails Long in Use

Iron spikes or nails were known to the ancients and are mentioned in the Bible.

### Safe, Bet

We never have seen a bald-headed woman, but we're willing to wager that if there is such a thing, the bald spot does not shine like the dome on a man.—Shelbina Democrat.

### Little Changed by Time

The dividing line of the French and Flemish languages in Belgium has hardly changed a mile in 1,000 years. One town, Enghien, in the province of Hainaut, is entirely bilingual.

### The Truth of It

If all the men who have been delayed at the office were to be placed end to end across the Sahara, there would be no one there.—Detroit News.

Vol. 1, No. 35

MENTONE, INDIANA, FEBRUARY 26, 1930

\$1.50 Per Year

Entered as second-class matter July 3, 1929, at the post office at Mentone, Indiana, under the Act of March 3, 1879

## Lion or Lamb

## A Good Time to Stage a Phone Party.

A good many years ago there gathered in Boston a number of unjustly taxed people, who formed the Boston Tea Party, and dumped a cargo of tea into the waters of Boston Bay—they were patriots. Why not organize a Mentone Phone Party and dump a few dozen phones in the street—we too would be patriots. Both are parallel cases. We urge all to stand as one in this matter—out with the phones when rates go up.

### THE TELEPHONE HEARING A COMPLETE FARCE

The above was the report that one of our business men made to us upon his return from the North Manchester meeting on last Wednesday, and from all indications we believe that he gave us a true and complete report of the gathering in a very few words.

Up to the present time we have not learned just what the outcome of the meeting will be, but it is safe to say that the phone company will get all that they ask for, and while they made certain promises—better service, with possibly some added free service—that does not mean anything, it would appear upon the whole that the meeting went just as the rate boosters had planned.

As the Farm News has contended from the start of this controversy, there is only one thing to do—and that is to order your phone removed just as soon as the increase in rates is put into effect. And our farmer friends might just as well fall into line and follow suit, as it will be only a short time until they will be asking to pay an increase in rates on their phones.

As we see it now it is simply up to the individual phone holder—and the question is: are you going to submit to a hold-up, or are you going to assert your rights and order your phone removed? If business men and farmers in sufficient numbers order their phones removed just as soon as the proposed increase in rates is put into effect the company may wake up and offer us a square deal. Are we going to be a bunch of easy-marks or are we going to show some back-bone and stand for what we think is just and right? This is a matter of principle, so regardless of what your competitor or neighbor does, stand by our guns and the minute that the rate increase goes into effect discontinue the service.

### FREEDOM HELPFUL TO CHILDREN

By MRS. ROSE BEFELER, Brooklyn Ethical Culture Leader.

Where the children had a great deal of freedom, in the progressive schools of Europe, their conduct seemed to be better than that of our children here; where there was a great deal of discipline, their conduct was worse.

On the whole our progressive schools are doing excellent work, more advanced than that of the schools abroad. We can get from them better out-of-doors projects, better means of teaching music, better methods of teaching handwriting. But we are forging the way and European educational leaders are looking to us to help them.

In the Odenwald school in Germany, where there is no set curriculum, an exceptional amount of freedom of movement, a grouping for lessons by subject rather than grade, they are stressing the feeling of internationalism, peace and good will, as more important than making walking encyclopedias of the children.

### WOMAN'S PART IN PUBLIC LIFE

By C. BASCOM SLEMP, Republican National Committeeman.

The sex idea in public life is rapidly being eliminated. The old-time prejudice against women in public office has largely broken down. Hundreds of women occupy elective offices and thousands fill every kind of appointive office. Nowadays the same test is applied to women candidates as is applied to men. The main question in both cases is ability to demonstrate service to the public.

Both political parties and every section of the country have reacted to the growing sentiment for women's participation in government.

### SENILITY HALTED BY CHEMIST

By DR. H. C. SHERMAN, Columbia University.

Modern chemistry is capable of prolonging an adult's life and can ward off senility effectively. In the last quarter of a century chemistry has not only co-operated with biology and medicine in the preservation of young lives but can also do what many biologists and medical men have been inclined to regard beyond the powers of science, namely, to so improve the normal life process as to induce a well-marked, positive extension of the average adult life span.

The discovery of the vitamins is only the beginning of the efforts of chemists to improve normal life. In the majority of individuals more time is needed for altruistic development, and in this respect the chemical research of the last twenty-five years has advanced human understanding of this world.

### LET STATESMEN RUN NATION

By DAVID KINLEY, President University of Illinois.

Statesmanship is an art, not a science, and therefore I do not believe that university departments and political and social science conferences can tell the people how to run the government.

Statesmanship is the application of sound judgment to a variety of facts of very different character—economic, political, social and what not, beyond the purview of a professor in any department of political science, economics, or sociology, or history.

I am a believer in conferences for the discussion by these experts in political sciences, in economics, in sociology, and what not, of important topics of public action from the point of view of such specialists. But it is the statesman's duty to assemble the results of discussion in all these fields and no specialist in any of these departments can do this as such specialists.

Conferences on political, social and philosophical topics are, after all, merely discussions of individual opinions. They are valuable for enlightenment, but only sometimes for practical purposes.

**SPEAKER GIVES DATA  
ON TRACTOR COSTS.**

(Purdue News Service.)

Lafayette Indiana, Feb. 25.—“The total cost per acre of the production of eighty acres of corn with a general purpose tractor was \$6.30, which includes interest and depreciation on all equipment,” said R. H. Wileman of the Purdue University department of agricultural engineering at the recent agricultural conference.

“During the past summer,” he said, “a project was started to determine the cost of producing corn with a general purpose tractor. The purpose was two-fold, first to find out what corn can actually be produced by this method and second, to determine whether this type of power will help solve the labor problem in connection with producing corn under clean-up measures which will help to control the corn-borer.

“The work consisted of the production of 80 acres of corn with a general purpose tractor furnishing the power for all operations. In the cultivation, 40 acres were handled with a two-row cultivator and 40 acres with a four-row cultivator, thus giving data on both sizes of equipment. The plowing was done with a two bottom 14-inch gang plow equipped with large rolling coulters and jointers and special stalk shields to obtain as good stalk coverage as possible.

“The ground was prepared by double discing both ways with a spike tooth harrow or a cultipacker hitched behind the disc the second time. A four-row check planter was used for planting all the corn. Two two row rotary hoes were used for the first cultivation and two and four-row cultivators used for the later cultivation.

“The total operating cost, including fuel, lubrication and labor was \$259.84 or \$3.25 per acre. The depreciation and repairs amounted to \$193.79 and the interest was \$50.68. All these sums make a total of \$504.31 or an average of \$6.30 per acre.”

**Announcements**

**The Square-Turn  
FARMALL  
Fits Your Farm**

**T**HE big point about this tractor is that it fits the average farmer's needs to a "T". No matter how small or irregular your fields, no matter what your crops or your heavy work, Farmall has got it on the entire tractor field for many good reasons.

The McCormick-Deering Farmall is the first real ALL-purpose tractor. It handles row-crop planting and cultivating along with everything else. It easily pulls two 14-inch plow bottoms. It has liberal power and every advantage for operating belt machines. With the 7-foot Farmall mower and a 7-foot trailer you can mow a 14-foot swath. And it is ideal on all haying jobs. Its equipment includes 4-row

planters and cultivators, middle busters, sweep rakes, beet and potato tools, and others.

It takes fast, timely mechanical efficiency and a cutting down of labor, and other costs to run a farm profitably nowadays. The Farmall has displaced horses and extra men by many thousands. You never saw such a useful and economical tractor, *and you can't see one except the Farmall.* Even if you're not buying now, keep yourself posted on the latest

in all-purpose power farming. Watch us operate the Farmall and its working tools on *one-fiftieth* of an acre—on a patch of ground smaller than the cellar under your house. We will be glad to have you drive it

We Also Have the  
McCormick-Deering  
15-30 and  
McCormick-Deering

**HOW TO LIVE LONGER**

By John Clarence Funk, A.M., Sc.D.

Director of Public Health Education,  
State of Pennsylvania

**Food Fads**

IT WAS recently announced that two internationally known Arctic explorers sustained life most satisfactorily on an exclusive meat diet while living in the temperate zone and engaged in sedentary habits. Almost at the same time a young lady claimed that she had actually flourished for months solely on peanuts. And still another experimentalist announced to the world that bread, milk and cheese constituted the perfect dietary. Thus, food fads are born.

However, when it is all said and done, these digestive excursions merely prove the amazing flexibility of the human system to food adjustment. And while from a news standpoint such studies are interesting, they are likely to result in more harm than good. The reason for this is that there are so many fanatically minded people who are eager to try anything new if it relates to the food question and particularly if it is connected with the reducing idea.

It must be readily admitted that various kinds of food are definitely contra-indicated in the actual presence of disease. But in general all foods, so far as the average person is concerned, are entirely safe and healthful to consume. Consequently sweets, meat, milk, grains and all their by-products have their proper place on the daily menu. The important thing is to maintain a rational diet balance and eat all things moderately.

Therefore, follow fads in clothing, interior decoration and motor cars if you have a falling for fads, but do not go crazy on the food fads. Long life is not in sympathy with such an attitude.

# This Week

by Arthur Brisbane  
Big Corporation Useful  
On Crime's Highway  
Worrying the Burglar  
Education and Money

The General Electric company has perfected a device to transport electric power over longer distances at less expense. The invention, called a "thyatron," is described as a modified vacuum tube, adapted to power transmission uses.

Some day science will "hook up" the world's great power stations of North America, Niagara, those in the Rocky mountains, on the Columbia river, Brazil, with other great stations in Africa and all over the world, as radio stations are now hooked up.

Then will come wireless transmission of power, so that airplanes will be able to "pick up power" at various points in their journey, instead of carrying tons of fuel.

The research work done by such institutions as General Electric, United States Steel, Westinghouse, Standard Oil, etc., will give back to the public in increased prosperity a hundred dollars for every one that those big corporations have ever received.

This country is traveling rapidly on the road that leads to thoroughly organized crime and complete contempt for law.

A United States grand jury reports that officials supposed to suppress the sale of drugs are organized on a "racket" basis, misrepresenting their activities to get more money from the government.

Some of them are alleged to be narcotic addicts. The charge is made that the big men in the business can "buy their way out," if they get in trouble.

In the seven months past criminals and others have purchased three times as many pistols as were sold altogether in the twelve months of 1928. A big demand for killing machinery.

Mr. Louis Pierson of New York's Irving Trust company delights in annoying burglars. He built, far underground, below his new fifty-story building, a safety vault lined with toughest steel, thick as the ancient walls of Jerusalem. It is the biggest vault in the world except those of our Reserve Bank and the Bank of England.

Now he surrounds his steel walls with a thick layer of water, so that the poor bank burglar, even if he did

break through the heavy steel, would have to do his work in a diving suit, most awkward for handling dynamite and drills.

Henry Ford, planning to spend one hundred millions educating young people on his own lines, making them "fit into life," teaching every one a trade, wants no advice.

He is right. No one knows better than he how to prepare boys for useful work. But Mr. Ford spoke hastily when he said he wanted no advice on education from those that never earned or saved a dollar.

The world's greatest educators have not been money makers or savers. Aristotle, who taught Philip's son, Alexander, made no fortune for himself. Alexander, conqueror of the world, spent collecting specimens for Aristotle, greatest naturalist and philosopher of the world, more than the total fortune left him by King Philip.

Conrad Hubert, who changed his name from Horowitz, made many millions, left \$6,000,000 to useful charities, left \$1,000,000 to his brother.

The brother, who sticks to his old-fashioned name, Horowitz, has been a humble court interpreter and he says he will now devote his time to German opera and charity.

Why did the rich brother wait until he was dead to give a million dollars to his mother's other son?

Many of us forget the proverb often quoted by Nathan Straus:

"What you give in health is gold, what you give in sickness is silver, what you give after death is lead."

Automobile makers will spend \$15,000,000 scrapping old cars to clear the way for new cars and moderate the second-hand car nuisance.

R. H. Grant, vice president of General Motors, one of the best salesmen in America, is chairman of the scrapping committee.

Perhaps Mr. Grant could find a way to ship those old cars, knocked down, to foreign countries—China, Africa, anywhere. Ten million old cars scattered over the earth would soon create an appetite for ten million new cars, just as the little car creates a demand for a larger car.

An expert says that in nine years, from the end of 1920 to the end of 1929, stocks were going up 66 per cent of the time, and going down 34 per cent.

The difficulty is to pick out the time when they are going up.

Two \$50,000 speed boats, each carrying three Liberty motors, with 38 knots speed, will help hunt rum runners in New York waters.

Other fast boats, costing \$250,000, will be put on the lakes to check rum running there.

## HOW TO WRITE ARTICLES FOR PUBLICATION.

There is an article of special importance to correspondents on the last page of this issue and we suggest that this leaf be cut out and placed in your scrap book for future reference. It will be of great help and interest to anyone who desires to know just how to go about it to write articles for publication, and is well worth filing away for future use.

## PEACH CROP TOTAL LOSS.

Urbana, Ill., Feb. 22.—Dr. M. J. Dorsey, chief in pomology at the college of agriculture, University of Illinois, predicted the state's commercial peach crop, which last year totaled 5,500 cars valued at \$2,000,000, would be a total loss this year as the result of subzero weather in late January. He said surveys made in fourteen peach growing counties revealed that in every peach orchard visited live buds were so scarce as to indicate a complete loss of the 1930 crop.

## THE LARGEST STORE IN

## BOURBON QUILTS BUSINESS.

Many people were surprised last week to learn that the Fibley store at Bourbon had closed its doors. This is one of the oldest and best known stores in this part of the state and its closing was as a shot out of a clear sky. Poor business and illness of the owner is given as the reason for liquidation.

## A BIRTHDAY SURPRISE.

On Sunday Feb. 23rd, the near relatives of Mrs. Lena Blue gathered at her home and gave her a pleasant birthday surprise. This month having the birthday's of four present. Those present were: Mr. and Mrs. Escoe Busenburg and son Harold, and daughter Delores, Mr. and Mrs. Ernest Busenburg and daughter Betty, Mabel Busenburg and Mrs. Reatha Kubley all of Elkhart, Mr. and Mrs. Bert Busenburg, and children Everett, Lois, Opal and baby Diane, Mrs. James Blue and sons, Tommy and Philip, and Mrs. Minnie Busenburg and children, Mary Jane and Raymond. All enjoyed a bountiful dinner and the afternoon was spent in visiting. All left wishing her many more happy birthdays.

MENTONE NEWS ITEMS

Mr. and Mrs. Billy Williams entertained Allen Jefferies at a fine fish dinner Monday.

Mrs. Ponsler spent a few days last week the guest of her daughter, Mrs. C. G. Carter.

Mr. and Mrs. Otto Rardin and daughters of near Warsaw spent Sunday afternoon with Mr. and Mrs. Sidney Johnson.

Mr. and Mrs. Logan VanDoran and daughter Helen Elizabeth of Warsaw spent Sunday with Mr. and Mrs. Adam Bowen and son.

Mr. and Mrs. Guilford Cook and daughter Gloria Jean were guests over Sunday at the homes of Lee Blue and William Cook.

Mr. and Mrs. Harry Oram and children of Warsaw and Mr. and Mrs. D. L. Bunner spent Sunday afternoon in South Bend.

Mr. and Mrs. Alba Glassley, Mr. Jesse Glassley and daughter Flossie, of South Whitley were Sunday guests of Mr. and Mrs. C. G. Carter.

Frances Rush, Mabel Sarber, and Marjorie Baker spent last week end at the home of Eileen Mollenhour where the girls enjoyed a house party.

Misses Frances Newell and Geneva Johnson and boy friends were entertained at a six o'clock dinner Sunday evening at the home of Miss Louise Aborn at Warsaw.

Mr. and Mrs. Frazel Minear entertained at dinner Sunday in honor of their nephew's birthday, the following guests, Mr. and Mrs. George Tinkey and son Max, of Warsaw, Miss Dorothy Denny and Omar Thompson of Argos.

CLUB MEETING.

The Sodales Club was delightfully entertained on Feb. 20th, by Fay Bunner and Oattie Walburn, at the home of the former. Roll call was responded with Bible Quotations, and the sec'y report was read and approved. Mrs. Vangilder gave a very interesting paper on "Women of the Bible" and Bess Manwaring in her pleasing and capable manner gave a paper on "what the Bible is and how we got it." The remainder of the afternoon was spent in playing rook. Ethyl Shafer being awarded the prize. We were glad to have as our guests Mrs. Snyder and Miss Francis Clark.

The hostess served a delicious two-course luncheon on small tables, decorated in keeping with Washington's Birthday. Having had a delightful afternoon, the members adjourned to hold the next meeting in two weeks with Gladys Carter.

# Analyzing ...YOU...

With the New Science of Syllabics

By C. J. COFFMAN  
Dean of All the Enumerators

## Amelia

One might write the word "amiable," when beginning to write your

The Wide-Spread  
Fingers of Amelia.

name, and it would not be far wrong, as to your character. The ancient meaning of your first syllable, AM, was people or nation.

The word AM has now come to mean the first person, as "I am." In a sense, it puts you at the head of the group of people.

This amiability is typified by you in the wide-open hand, as it is easy for you to spread your fingers wide apart.

This amiability of yours continues even through hard labor approaching misery, as is signified by the combination of the first two syllables of your name, AMEL.

Going further into your name, we find an ancient syllable MEL, A, meaning fullness.

Now combining all these together, we find that your best occupation would be something in which you labor with and for the people, through the pioneering of a great cause, to the completion or fulfillment of the ideal.

Truly you are the salt of the earth, Amelia, as an ancient syllable used in your name would indicate. People depend upon you a great deal, and you can easily assume leadership any time you get inspired with the reality of a great human need.

Your chief injunction here would be not to allow yourself to be led into too much sacrifice for your own good. Always try to see that you are taking yourself along with the big idea and receiving your own compensation as well.

Amelia Earhart is a good example of what I mean by connecting your labors with the reward of those labors. Amelia E. Barr, the novelist, might also be cited as one who had succeeded in the eyes of the world.

# CLARK'S

# SPEND \$750,000 A DAY TO MILK COWS

## Machinery Helping the Dairyman Fight Drudgery on the Farm.

Three quarters of a million dollars in cash or time are spent by American farmers every day in milking the nation's cows.

To milk America's 25,000,000 cows by hand requires the time of 2,500,000 people two hours a day, or 5,000,000 hours of human labor each day.

These figures are from computations by experts of the De Laval Bureau of Dairying.

The production of milk and butter fat on the nation's farms constitutes in the value of its products, America's largest industry. Dairying has often been called the most profitable branch of agriculture. But dairying could be an even larger and more profitable industry, says the bureau, if every one engaged in it were to take advantage of mechanical means now available for combating drudgery in dairy farming.

### Better Than Hand Milking.

No farmer nowadays would think of harvesting the wheat crop by the sickle method used in Biblical times, yet dairy farmers today spend or pay for 5,000,000 hours of labor daily in milking cows the same laborious way carried on centuries ago. Before the advent of the mechanical milker, there

Magnetic force provides the nearest perfect milking method yet devised by man.

was great doubt that some simple dependable mechanical device would ever be invented that would milk cows better than they could be milked by hand, but after this was perfected a new group of "doubting Thomases" arose with the charge that the savings achieved by mechanical milking was more than offset by the extra labor involved in washing the utensils.

Light on this problem as well as answers to a number of other questions in the minds of many dairy farmers are to be found in a survey made among 1,844 users of mechanical milkers throughout the United States and Canada, according to the De Laval

Bureau. Slightly more than 83 per cent of the users said that the milker reduced by half the time required to milk by hand. Exactly 99.4 per cent reported that they got as much or more milk with the milker as by hand milking, 94 per cent found their machines were easily kept clean, and 96 per cent considered their milking machine investment profitably made.

### Takes Drudgery Out of Milking.

Other facts showed that the milker took much of the drudgery out of dairy farming, in addition to a saving in the cost of labor more than enough to offset the cost of the milker.

This investigation over such a wide territory and covering a variety of farm conditions holds much encouragement for the hundreds of thousands of hard-working farm people now compelled to straddle milk stools twice a day every day in the year.

## Machine Achieves Uniform Milking

### Magnetic Milker Seen as Biggest Dairy Development of 1929.

Application of magnetic force, mankind's latest engineering achievement to solving the drudgery of milking, humanity's oldest chore, is probably the outstanding dairy development of the year 1929.

From time immemorial man has dreamed of a better way to milk, a method which would eliminate the necessity of extracting the world's daily supply of milk by millions of laborious tiny hand squeezes. But this continued to be a dream until Dr. Carl G. P. De Laval and others started work upon mechanical milkers as early as 1894 with the result that today an estimated two million out of America's twenty-five million cows are milked by mechanical means.

### Achieves Perfect Uniformity.

Doctor De Laval died in 1913 but the experiments and trials carried on by his associates bore fruit early last year with the perfection of the magnetic milker.

The why and how of the magnetic milker are explained by the De Laval Bureau of Dairying, named in honor of the great Swedish inventive genius.

Every good dairyman knows that cows like to be milked the same way every day, that some people are better milkers than others and can get more milk from the same cows, and that a cow's production will fall off for a milking or two when she is milked by a stranger. The mechanical milker did away with a lot of this so-called human element in milking. Neither the hand milker nor the ordinary mechanical milker could give a cow a consistent milking. The magnetic milker starts to finish with absolute uniformity. This is accomplished by the magnetic milker.

Perfect, uniform, fast and regular milking is largely dependent upon pulsations. These must be regular and absolutely uniform. Irregular

pulsations have the same effect on a cow as a change in hand milkers. To obtain absolutely uniform pulsations that would be true to a split second, a method of applying magnetic force to a milking machine was devised. This is the same force used by industry to perform many important and intricate tasks because of the dependability and the simplicity with which it can be applied. Through a simple arrangement in the pulso-pump of the milker electro-magnetic force was created, controlled and transmitted by wire to the milker units. In the same way that a clock ticks off seconds more accurately than can a human, the magnetic milker draws the milk from each cow exactly the same at each milking with beneficial effects. No matter how many units are used at one time every pulsator moves as one.

The application of magnetic force as a means of doing away with the most tedious of all dairy tasks will likely work a revolution in America's largest industry. Attuned to pulsate in harmony with a living animal of a highly developed nervous temperament the magnetic milker is enabled to get the most milk at the least cost, and to save half the time needed to milk by hand.

### O. E. S. ANNIVERSARY.

The twenty-fourth anniversary of Mentone Chapter Order Eastern Star was celebrated Feb. 12th, at the Masonic Hall.

A delectable six-thirty o'clock dinner was served to one hundred and forty-two guests. The dining tables were decorated with tiny log cabins and patriotic colors in honor of Lincoln's birthday.

There was a continuous game of bingo enjoyed in the tiler's room, until time for the program in the main hall. This room was elaborately decorated with American flags and red, white and blue crepe paper. The program was opened with a splendid musical number by the Birdland trio. The trio is, Miss Beulah Busenburg pianist, Delbert Hunter, violinist and L. G. Alber whistler, each one an artist in their part.

Five girls dressed in the colors of the points of the star escorted the charter members, the first Worthy Matron, Margaret C. Jefferies and the present Worthy Matron, Edna Burns to places reserved in the east for them. Mrs. Burns in a pleasing manner welcomed the guests, and Mrs. Jefferies gave a brief history of the chapter. The girls sang songs for each color of the star points and presented the honored ones with the flower of her color.

Little Misses Geraldine and Jau-nita Nellans dressed like colonial girls came in with a beautiful decorated float and presented Mrs. Burns with a huge birthday angel foodcake baked in tiers and adorned with twenty-four pink candles.

Again the trio appeared and was

greatly appreciated. A playlet entitled "Fun in a Photograph Gallery" was given by sixteen characters and created a spirit of mirth which was carried home with all present.

The committees in charge of the dinner and entertainment proved their ability and have the gratitude of the entire membership of the O. E. S. and Masons.

### DELORIS AUDREY HORN

Deloris Audrey, infant daughter of Mr. and Mrs. Fred Horn, passed away on February 22, 1930, at their home four miles north-west of Mentone.

Funeral services were held Sunday afternoon at the Methodist church, conducted by Rev. Power. Burial was made in the Mentone cemetery.

### MEETING STILL ON AT THE BAPTIST CHURCH.

There has been large attendance and splendid interest in the meetings begun February 15 at the Baptist church. A large choir under the direction of E. E. Wiley of Bourbon sings special numbers each evening and added to this have been solos, duets, etc. during the half hour of song service preceding the message each evening. Sermons continue to be based on the book of Revelations by Rev. Squibb.

These special services will in all probability close on next Sunday evening, so avail yourself of the opportunity of attending each evening until then.

### TIPPECANOE NEWS ITEMS

Mr. and Mrs. Clyde Brugh spent Sunday at the Simon Snyder home.

Mr. and Mrs. Earl Sarber and family spent Sunday with Mr. and Mrs. Wm. Vernet.

Mr. and Mrs. Wm. Thrasher and family moved to the O. M. Thrasher farm last week.

Mr. and Mrs. Homer Blue spent several days last week in South Bend visiting relatives.

A vacant building at Tippecanoe, formerly the bank building burned last Friday night.

Mr. and Mrs. Francis Kehoe attended the funeral of the little daughter of Fred Horn's Sunday afternoon.

Mr. and Mrs. Clyde Moriarty's house caught fire one day last week, but it was extinguished before much damage was done.

Mr. and Mrs. Chas. Vangundy of Elkhart are moving on the Hiram Horn farm, where they will farm and take care of Mr. and Mrs. Horn.

Mr. and Mrs. Milo Griffis and family and Mr. and Mrs. Earl Carbeanier of Tippecanoe spent Sunday with Mr. and Mrs. Marion Griffis, in honor of Mr. Griffis birthday.

MENTONE NEWS ITEMS

Mrs. Fred Halterman is reported to be quite sick this week.

Miss Daisy Jones spent over Sunday with her parents, Mr. and Mrs. Ed Jones.

Mary Borton of Canton Ohio spent Saturday and Sunday with Mr. and Mrs. Lon Borton.

Mrs. Pearl Joyce and children of Warsaw were guests of relatives in Mentone Sunday.

Mrs. Emery Huffer has accepted a position at the McDonald hospital, at Warsaw as nurse.

Mr. and Mrs. Elmer Fenstermaker and Mr. and Mrs. Henry Mills spent Sunday in Logansport.

Miss Penelope Shoup of Warsaw was the guest at the Shafer and Manwaring home over Sunday.

Donald Weirick of Fort Wayne spent Sunday with his grandparents Mr. and Mrs. George Whetstone.

Miss Marcia Long of Indianapolis was a guest over Sunday of her parents, Mr. and Mrs. Allen Long.

Mr. and Mrs. Charles Emmons spent Sunday evening in Akron the guests of Mr. and Mrs. Ray Middleton.

Mr. and Mrs. Wallace Hibschan, and Mrs. Lavina Shinn were Sunday dinner guests of Mrs. Lizzie Hibschan.

Mrs. Raymond Hibschan and son Bobby of Milford spent Tuesday with Mr. and Mrs. John Fenstermaker.

Mr. and Mrs. Herschel Fenstermaker and son Don Keith spent Sunday with Mrs. Fenstermaker's parents Mr. and Mrs. Fred Riggs.

Kenneth Mollenhour who has been employed in Fort Wayne came to spend the summer with his parents Mr. and Mrs. Miner Mollenhour Friday.

Car Whetstone, son of Mr. and Mrs. Castle Whetstone, who was seriously ill last week with the flu is reported to be a little better at this time.

Mr. and Mrs. Byron Burgner of Bourbon and Mr. and Mrs. Pearl Coplen were guests Saturday evening for supper at the home of Mr. and Mrs. John Coplen.

Mr. and Mrs. Herschel Enyeart and family of South Bend, Mr. and Mrs. Chauncey Tucker and Mr. and Mrs. Verl Halterman spent Sunday with Mr. and Mrs. Ed Halterman.

Leslie Laird son of Mr. and Mrs. Frank Laird who was quite ill last week in the Indianapolis hospital with a severe case of tonsillitis, is reported to be improving and was able to go to work Monday.

Mr. and Mrs. Ray Lynn and family spent Sunday with Mr. and Mrs. Gaylord Doran of Burket.

S. O. Stookey of Leesburg was the guest of his sister, Mrs. Cora Vangilder and sons Monday for dinner.

Sunday afternoon callers of Mrs. Lizzie Hibschan were: Mrs. Chas. Meek and daughter Mary, Miss Long and Mr. Baker, Mr. and Mrs. Howard Metzner and Mrs. Jack Miller, all of Fort Wayne.

Personally, these days, we would rather be on the side of the revolving door that comes to a stop in the warm hotel lobby.

### DR. YOCUM IMPROVING.

L. P. Jefferies received a letter from the Yocum's at New Orleans stating that the Doctor's is improving very nicely.

### WORTH READING

If you are not reading the "This Week" article by Brisbain in each issue of the Farm News, you are missing something worth while. The feature this week is especially good. Read it.

### ENTERTAINED AT DINNER

Mr. and Mrs. Dean Nellans, on Friday evening entertained the following guests at 6 o'clock dinner: Mr. and Mrs. F. B. Davison, Mr. and Mrs. Don Ernberger and Mr. and Mrs. Emmett Carter.

### RECEIVED NO BENEFIT.

A letter received by Adam Bowen the first of the week from Cal Beltz, stated that Mrs. Beltz who was taken to Martinsville for treatment several days ago has not improved as was hoped and that he would bring her home today. Mrs. Beltz's many friends will be sorry to learn that the treatment was of no benefit to her.

### BREAD SHORTAGE.

Owing to an unusual demand for Burns' bread every dealer in town was sold out of bread last Saturday night, and as Mr. Burns had not anticipated the increase demand many of our people had to do without the staff of life on Sunday. The demand for Burns' bread is constantly on the increase and it keeps his present capacity hustling to fill the orders. The best bread that can possibly be baked is probably the reason for this increasing demand.

### A VERY FINE GENTLEMAN TO DO BUSINESS WITH.

Mr. R. D. Roby, the new proprietor of the Warsaw Fertilizer & Tankage Co., was in our village Monday putting out some advertising matter. While in town he made this office a call and informed us that it was his intention to build up the business of that institution, if square dealing would turn the trick. Any of our readers who may have any business relation with him may rest assured that they will receive honest treatment and efficient service. Mr. Roby was formerly from Brookston, Indiana, thoroughly understands his business and carries the best recommendations. See his advertisement in this issue.

## LIVE STOCK NEWS

### HORSE BUSINESS IS COMING BACK

### Breeders Have Been Timid to Resume Operations.

(Prepared by the United States Department of Agriculture.)

Whether the horse continues to decline in numbers by reason of displacement by the motor car and tractor, or not, the horse business is due for better times in the opinion of J. O. Williams of the United States Department of Agriculture. The number of horses on the farms of the country declined in 1928 to the lowest point yet recorded, but the market stiffened or advanced. Mr. Williams points out that for several years farmers have been breeding and raising only about half as many colts as are required for replacement of the diminished number of work animals in use.

"Inferior horses of all types are a drag on the market, and undoubtedly will continue to be so," says Mr. Williams. "But the difficulty with the horse and mule situation in recent years has been largely psychological. Breeders of horses and mules have wondered whether there would ever be a recurrence in demand for work stock and have been timid about resuming breeding operations. This has resulted in the present shortage of good work and pleasure animals, a situation which promises to become much more acute within the next few years. We believe that farmers should now study their farm power situation; those who will continue to use horses and mules can now replace aging animals with young stock before an acute shortage occurs.

That farmers are beginning to realize this situation is reflected by a study the Department of Agriculture recently made of the number of stallions and jacks in service in 24 states. The number of these has declined sharply in recent years, but owners in some localities reported that last year witnessed a considerable increase in the number of mares bred.

### Cross-Breeding Tests at University of California

At the University of California cross-breeding with sheep tests throw light on the best rams to use.

On pure-bred Rambouillet ewes Southdown, Shropshire, Suffolk, Romney Marsh, Hampshire and Rambouillet rams were used, one ram to 20 ewes. When between four and five months old the lambs were graded.

The Southdown lambs—16 raised—weighed an average of 78.5 pounds

grading 43.75 per cent choice, with average value of \$10.03 for all. Shropshires—24 lambs—weighed 76.7 pounds, grading 41.7 per cent choice, with average value of \$10.07. Hampshires—22 lambs—weighed 76.3, grading 3 per cent choice, with average value of \$9.13. Suffolks—13 lambs—weighed 81.6 pounds, with average value of \$9.95. Romneys—19 lambs—weighed 77.5 pounds, grading 36.8 per cent choice, with average value of \$9.25. Rambouillets—21 lambs—weighed average 70.1 pounds, grading 19 per cent choice, valued at \$3.83.

The Suffolks bred the smallest number of lambs, 13, which, however, made the greatest weights, but graded only 3 per cent choice. The Southdowns also bred only 16 lambs, but made 78.5 pounds weight and the high percentage of choice grade, which put them at the top in value.

### Liver Flukes in Sheep Difficult of Treatment

In most all flocks of sheep there is now and then one or perhaps several head that do not seem to thrive even though you have given them good care and feed. Most likely stomach worms is the cause combined with the flukes that are common in infested sheep. But if you have treated them with approved remedies and they do not respond favorably it is just possible that you have an entirely different parasite. Namely, what is called liver flukes. Liver flukes are entirely different from a stomach worm. They are a flat, brownish gray worm and inhabit the gall bladder and liver of sheep and sometimes there are a few in the intestines. The only known remedy for flukes is carbon tetrachloride. It is a violent poison, but properly administered seldom does any harm. The usual treatment for stomach worms does not apply for flukes. They require special dosing. Like the stomach worms, flukes came into corn belt flocks unawares, like a thief in the night. They are here and must be reckoned with in the future.

### Calves on Roughage

The tendency on many farms is to winter calves on cornstalks and straw and perhaps some timothy prairie hay, sudan grass or some other nonleguminous roughage. All such roughages are deficient in protein and mineral matter as is required for normal growth and for keeping it in a thrifty condition. Quite often there is a considerable amount of cheap nonleguminous roughage on the farm and it has to be or should be used for some purpose.

### Doomed to Fail

A St. Louis woman asks divorce because her husband is too stingy to buy her a washboard. A short-sighted policy, it seems to us, anybody ought to see at a glance the investment possibilities of a strong woman with a washboard. Our prediction is that man will never become rich.—Kansas City Star.

With the New Science of Syllabics

By C. J. COFFMAN  
Dean of All the Enumerators

## Alice

"O, don't you remember Sweet Alice, Ben Bolt?" sang the old song, and truly we find in this soft and gentle name all that Sweet Alice was supposed to represent.

The Wide-Open  
Eyes of Alice.

An ancient word, pronounced like Alice, had the meaning of joyousness, with a secondary meaning our present word, another.

In childhood's classic, the wide-open eyes of Alice in Wonderland, really conveyed both these ideas. I know that you must represent a great deal of joy to those about you, and that your reputation must have a way of spreading to others.

This will never be because of anybody's right to call you a flapper. Even if you are not the "old-fashioned girl," you certainly are a very quiet modern girl.

Your character shows strength and firmness, coupled with kindness, and a really beautiful domestic ability. You have that broad view that enables you to regard crowds as your own family.

This is especially true, also, of one of Washington's most gracious hostesses, Alice Roosevelt Longworth. Part of this reputation of our more famous Alice is due to a combination of graciousness and absolute independence.

With Mrs. Longworth, the so-called rules of society are very nearly a farce, almost as much as the rules of life seem to be in Alice in Wonderland.

You can combine gracious attraction with sweet independence yourself, daintily stepping all of them, without tipping over any of them.

Alice White, motion picture star, successfully walks this pathway, as do most of the Alices who attain to social prominence.

In your own case, the syllable AL of your name, also begins the word Alliance and Allies, signifying comradeship and trust. But we must not forget that the last syllable of your name, ICE, signifies coldness, dignity, and the ability to freeze out that which is not acceptable to you.

(© 1936, Western Newspaper Union.)

## FRIENDSHIP CLASS MEETINGS.

The Friendship Class of the Methodist Church with their families had two very pleasant surprise parties last week. On Tuesday evening they called on Mr. and Mrs. Thomas Whetstone in their new home on South Franklin St. The evening was happily spent and the committee

served refreshments.

On Friday evening Mr. and Mrs. W. C. Davis were called on in much the same way in their home on N. Broadway. Mr. and Mrs. Davis proved themselves fine hosts even though much surprised. A fine representation of the class and church were present at each of these places and all departed wishing these new citizens of our town many years of happiness in their new homes.

## HARD WOOD TREES WILL BE OFFERED FOR SALE BY STATE

Approximately one and three-quarters million hardwood trees will be offered for sale during March and April by the state conservation department it was announced today by Richard Lieber, director. These are valuable for reforesting barren and eroded lands and building up present woods, Lieber, said.

The trees will be sold at actual cost of production, and the species available include Norway and White spruce, American red Pine, Scotch pine, Black walnut and Black locust.

The state now has six million young trees growing in the nursery at the Clark forest reserve and three more acres will be added to the reserve this spring, Lieber said.

## LAW HELD VALID.

A tax of five per cent on the gross receipts of common carriers of freight by motor vehicles along public highways over regular routes has been held valid by the United States supreme court.

The operators of such freight lines opposed the tax on the ground that a similar levy was not made against other freight carriers, but the supreme court held that the different classifications was justified because of the more frequent use of the highways and the consequent destruction there as well as because of the additional dangers placed upon the public.

This seems to point the way by which states can make the common carriers using automobiles and trucks regularly pay something to help keep the roadbed in repair. This is fair because the autos compete with the railroads and the latter have to maintain their own tracks, while at the same time help to pay the general taxes.—Newaygo, Mich., Republican.

From the above it seems that Michigan is taxing motor freight lines that use the public highways. This is a good law—motor freight and bus lines should be compelled to pay a goodly sum toward the upkeep of the public roads upon which they travel.

## Lumbago Meets Deadly Enemy In New Konjola

For Twenty-five Years Man  
Lived Life of Misery—Now  
Has New Strength and Vi-  
tality.

WILLIAM JASPERSON

"For twenty-five years I was the victim of lumbago," said Mr. William Jaspersen, 315 Pierce street, Gary, Ind. "I was in a very run-down condition, without ambition, or energy. I suffered constantly from pains in my hip. During all this time I also had constipation.

"I had been reading about the splendid accomplishments of Konjola and decided to find out what it could do for me. After taking seven bottles of this new medicine I was relieved of that chronic case of lumbago: constipation and other troubles disappeared and I am freed of all aches and pains. Konjola restored me to health, and I recommend it to all who suffer as I did."

Konjola is sold in Mentone at Shafer and Goodwin drug store, and by all the best druggists in all towns throughout this section.

### LATE CORN PRODUCES LESS THAN GOOD EARLY KINDS

(Purdue News Service)

Lafayette, Indiana, Feb. 25. "Corn Variety experiments during the last three years indicate that in northern Indiana under average conditions, the late or full-season varieties of corn produce lower yields than varieties which mature in about two weeks less time," said S. R. Miles of the Purdue University agronomy department in a talk at the recent agricultural conference. "In addition," these medium-early varieties produce corn of much better quality and corn which can be husked

sooner and can be cribbed safely without sorting almost every year. This has been true even under conditions which produced yields of more than 80 bushels of corn per acre.

"In the northern third of the state," said Miles, "more than 30 varieties have been tested, three of which have proved superior. These are M. A. C. Yellow Dent, Fulton Yellow Dent, Fulton Dent and Clement White Cap Yellow Dent. In addition to giving the highest yields these varieties have produced corn of excellent quality and they all exhibit unusual vigor and thriftiness.

"Some 70 demonstrations by farmers in 21 counties in the last two years have corroborated the results secured from these experiments."

"It has also been learned that the common belief that late kinds of corn yield more than early kinds is due to a general failure to recognize that at harvest there is a great deal more moisture in late varieties than in the earlier kinds. Plant early varieties thicker than late ones to make up for the difference in size of ear."

Miles concluded, "Men who continue to grow the later sorts for the main crop can often make profitable use of the earlier varieties for early feed or for late planting."

### MENTONE NEWS ITEMS

# How to Write News Articles.

## Of Special Interest to Correspondents or Others in the Preparation of Items for Publication.

Write regularly. A quarter column news letter each week is worth more than a three column letter sent once in six weeks.

Keep in mind that your paper wants the news before any other paper gets it. Make it a point of honor to get each story to your paper before other correspondents send a story about the same happening to their papers, so that your paper can publish it first. Avoid writing about something that has already been published, unless you can give new, timely or interesting facts. Never delay sending in an item of importance because you find it difficult to write. Give the editor the facts and ask him to write the item.

Send in the items the same week they happen so that they can be printed while still fresh. Should you miss an item one week, send it the following week rather than miss it altogether—provided it is a worth while item and has not yet been printed. Get the news. Get it as fresh as possible, but get it.

Avoid the habit of writing only personals, only church news, only school news, only one family news or only one other kind of news. Write news of as many kinds as possible and all of it that you can secure. Tell the news about everybody and everything in your territory. There can be no poorer correspondent than he from whose news letters it is possible to tell what family or clique he belongs to.

Try as much as possible to report only from your own territory, but do not hesitate to send in an item of news from some other correspondent's territory if you believe the other correspondent may miss it.

Your paper wants all the news, and it wants it just as fresh as it can get it. Whenever two correspondents send in an item about the same happening the one received first by the editor will usually be printed. If both arrive at the same time the more complete or the better written item will be printed.

If a person gives you an item you cannot use, better say so and give reasons; do not leave the impression that it will be printed. The person may think that his news is important. On learning that it was not printed his disappointment would be greater than if you had refused the item in the first place.

**How To Tell The Story**  
Ordinarily news items should answer the following questions so far as they concern the item: Who? What? When? Where? Why? and How?

Memorize these questions and make use of them every time you are getting information about some happening you intend to write about.

If the answer to none of them has been omitted in the item, then it is pretty likely to contain at least the main facts. To make the item a complete news story, all important details must be added. These vary so greatly in number and kind that to even attempt a general description of them goes beyond the scope of this article. Many are referred to in the instructions how to write up certain kinds of news, printed elsewhere herein. Others the correspondent will himself readily discover. Who?—The answer to this question, as written in a news item, is most often the name of a person. It may be the name of a building, as with a fire; or the name of a railroad as with a wreck, etc.

If the answer is the name of a person or persons, be careful to get it correct. Every person has the right to spell his name to suit himself; and no person likes to see it spelled another way.

If one branch of a family calls itself Davies and another Davis, or one Smythe and the other Smith, respect the taste of each. If a lady writes her name Grayse, instead of Grace, or Llewella instead of Luella, write it the same way. If someone had rather be called O. Wellingholthausen Bosh than Oliver W. Bosh, call him so. If another prefers to have his name written Jean, Jack or Jno., rather than John, or if he prefers Georg or Georges to George, respect his preference. Make it J. P. Cook, if he prefers it, to John P. Cook or John Preston Cook.

In localities where there are a great many foreigners, it is often wise to learn how the letters of the alphabet are pronounced in the various languages. With very few exceptions, the spelling peculiar to each European language is much more simple than the English spelling, and when one knows how to correctly pronounce the letters of any specific language, it is usually easy to spell the proper names of each nationality correctly.

If you are not sure about it, do not hesitate to ask even your nearest friend how he writes his name. Always write the name of another in just the way that person writes it.

Nicknames adhere so closely to some persons that they are seldom known by their right name. If you must use nicknames, to make plain whom you are writing about (and such occasions should be rare) do it in about the following style:

"John Walker, known among his friends as 'Doc' Walker," or "John

Walker, better known here as 'Doc' Walker."

When writing about ladies, always use the titles Mrs. and Miss. The plural of Mrs. is Mesdames; the plural of Miss is Misses. When you write about a number of ladies, some of whom are married and some single, separate the names of married ones from those of the single ones and write "Mrs. So-and-so and Miss So-and-so." The word "Mesdames" is really French, instead of English, and its meaning is unknown to many people. Use Mrs. before the name of each married woman in preference to using "Mesdames" before the entire list of them.

Refer to a married couple as Mr. and Mrs. J. P. Jacobs, rather than as J. P. Jacobs and wife. Some papers, however prefer the latter style. Write in conformity with the style, and always use the same style.

Do not use the title Mr. when speaking of men only. The name itself is sufficient.

In enumerating the persons in a mixed crowd give the married couples follow with the married women whose husbands were not in the crowd, next with the unmarried men in this style:

Those present were: Mr. and Mrs. James Allen, Mr. and Mrs. Andrew Coon, Mr. and Mrs. Roland Newman; Mrs. Robert Brown, Mrs. Mary Roberts; the Misses Rose Beeman, Katherine Cloud and Nellie Borris; John Ault, Peter Saylor and Hiram Walker.

A widow may use either her own christian name or that of her husband. Use the name the widow uses, or the one under which she is better known.

Where those present at the occasion you are writing about consist of whole families, with small children, you can refer to them as Mr. and Mrs. John White and children or as John White and family, whichever way conform with the style used by your paper.

When reporting a list of names, it is a good idea to arrange each kind in alphabetical order thus:

Mr. and Mrs. J. Q. Adams, Mr. and Mrs. Rodger Berry, Mrs. Susan Brown, Mrs. John Myers, etc.

Not only will this prevent cause for complaint from some too easily offended person, whose name happened to appear last in the list, but it will often bring to mind a name you would have otherwise overlooked.

When you give names be sure to give them all. If somebody's name is left out, that person is almost sure to consider it a personal slight.

Be sure to use titles, such as Dr. Judge, Rev., Pro., Sergeant, Captain, Governor, etc.

The title Rev. should be preceded by the article "the" Say "the Rev. A. L. Buell," not "Rev. A. L. Buell." Use Father or Reverend Father when

speaking of Catholic priests. Give dentists and veterinary surgeons the title "Dr." When necessary, for the sake of clearness, say Dr. W. C. Hobart the veterinarian. Say former Judge, not ex-Judge. Do not have a long title precede the name; put it after the name, as John Jewell, keeper of records.

When writing an item about a child, make it clear that it is a child, by expression, like "George, the 10-year-old son of," or "Beatrice, the infant daughter of."

What?—The thing that happened is the answer to this question. For instance, fire destroyed a house, an old settler died, an auto collided with a street car; a bridge collapsed.

When?—Possible answers to this question are: At 10 o'clock Monday evening; at 4 in the morning last Wednesday; sometime between Saturday evening and Monday morning. We spend "Tuesday" with friends; visit "over Sunday" with relatives.

Except in trivial matters, be exact in stating the time. Use figures for the hour, say 4 o'clock, not four o'clock. Do not say 7 a. m. Tuesday, say 7 o'clock Tuesday morning. Always spell out the names of the days of the week and of the months of the year. Say Monday and Saturday, not Mon. and Sat., say July and October, not Jul. and Oct., and do not use st, nd, etc., after dates, May 1 and July 3, not May 1st, July 3rd.

Never use the expression "Sunday-ed"; it is just as silly and improper as would be "Thanksgivinged".

Never say "yesterday" or tomorrow." Give the day of the week or the month. Avoid "the 23rd inst." give the month, as May 23.

Where?—Some answers to this question are: At the home of his parents, Mr. and Mrs. Herbert E. Carhart, near Bainbridge chapel; at the home of his son, David A., near Jonesboro; at the intersection of Elm and Baird streets; on the Lincoln Highway, three miles east of Elmburst, near the West farm; at the Masonic Hall; in the alley back of Moore's grocery.

Be sure to give the correct location, and give it in such a way that it cannot be misunderstood. If there are two United Brethren churches in a town, state which one; if Charles Edwards, father, and Charles Edwards, son, live on the same street, state if it is in the house of Charles Edwards, Sr., or Charles Edwards, Jr. if there are two Smiths in the grocery business in a town, do not say Smith's grocery; say H. M. Smith's grocery or Edward Smith's grocery. In some cases the location should be described very minutely; for instance, when the body of a murdered man is found.

Why?—This question is answered by giving the cause. A train was wrecked because of a defective rail;

(Continued on next page)

## How to Write News Articles.

a building was destroyed because it was set on fire by lightning; a horse ran away because it became frightened at a tractor, etc. Not every item gives an answer to this question. In case of a marriage, for example, it is taken for granted that the bride and groom married each other for love. Even if there was ground to believe that such is not the case, it would not be proper to say so in the item about the wedding.

How?—The answer to this question should comprise all details not answered by the first five questions.

The question, "How were the young couple married?" might be answered simply "by the priest." This would not be sufficient to make the item complete. There must be more detail. How? Were there attendants? How? Was the ring service used? How? What kind of dress did the bride wear? The correspondent should ask the question, How? in as many ways as he can think of, but should answer it only when the answer seems to be of sufficient importance and interest.

Like the question Why? the question How? is frequently left unanswered in an item. When a person goes to a neighboring town, it is never answered by saying that he went on a train; neither is it answered in the report of a political election by telling that it was by ballot. In such cases the answer is unimportant.

One of these questions may suggest another. While a news item rarely contains more than one answer to the question When? there will often be several answers to the other questions. Additional answers to any one of the questions usually suggest additional answers to some of the other questions. For example, when we ask the question How? were there attendants? The question Who were they? suggests itself.

### Far-Off Yet Near

Referring to the Andromeda nebula, a galaxy of stars so distant that 1,000,000 years are required for its light to come to us: "The astonishing fact," says Dr. Forest Ray Moulton, distinguished astronomer, "is not that these exterior galaxies are so far away, but that they are so near that their distances can be approximately measured."

### Art of Giving

He who gives things only gives little. The real part of any present is the imaginative sympathy through which one has understood and responded to a desire in some other human being and has put something of oneself into the choice of that which will gratify this desire.—Woman's Home Companion.

# POULTRY

## TURKEY INDUSTRY GROWS IN NEVADA

### U. S. Expert Finds It Easier With Small Flock Unit.

Nevada is building up a solid turkey producing industry in a logical way, in the opinion of H. L. Shrader, extension poultry specialist of the United States Department of Agriculture, who recently paid a visit to this state.

The growing of the holiday bird in Nevada is on a farm flock basis, the expert stated, with from 150 to 300 birds, as a rule, being raised along with other crops. It is easier with the small flock unit produced in co-operation with other crops, according to the federal man, to raise the type of high-grade bird for which Nevada is becoming known.

Two of the best feeds for turkeys are milk and alfalfa, and these, Shrader said, being produced on the farm with the turkeys, afford good feed at a low cost. With such small flocks, he said, the farm wife can take care of a good share of the work, thus cutting costs, as otherwise extra labor might have to be hired.

The outlook for expansion in the industry in Nevada is good, the specialist stated. Nevada conditions, he believes, are well suited to turkey production.

"Turkeys and chickens should never be run together," he declared, explaining that parasites, little harmful to chickens, but deadly to the bronze birds, are carried by the chickens. Turkeys should be kept far from the farmhouse, he believes.

Sanitation in another means of keeping turkeys disease-free, he stated.

### Buy Tested Cod Liver Oil for Laying Fowls

The use of cod liver oil in feeding laying hens during winter months and in raising young chicks during the early spring is one of the recent developments in poultry production. Practically every one who has used a good quality product has found that it has been helpful in keeping up the vitality of the flock, preventing leg weakness in chicks and securing a better texture of shell with eggs.

The reason for the value of this product is largely due to the vitamin D which it contains. Vitamin D is the substitute for sunshine. It helps fowls to properly absorb the minerals which they consume. Without vitamin D or sunshine, fowls will fail properly to absorb minerals, even though they may be abundantly supplied.

The popularity of cod liver oil has encouraged the use of many substi-

tutes. The fishy odor which is characteristic of many of these products is not a guarantee that they are of any particular value from the standpoint of being a substitute for sunshine. There is even a good deal of difference in the efficiency of cod liver oil, so it is well to buy a product that is either tested for vitamin content or guaranteed to give satisfaction.

### Turkeys Thrive While Roosting in the Open

It is unnecessary to provide a house for turkeys though it is the part of wisdom to have a shed handy into which they may be driven on extremely stormy nights.

As a usual thing they will do better roosting out in the open even in quite severe weather.

Where only a small flock is kept 15 females may be mated with one male if he is unquestionably vigorous. If a flock of about 25 or 30 is kept, two males will be needed but they should not be allowed to run with the flock at one time.

One should be allowed to run with the flock one day and the other the next.

The reason for this is that where both are allowed to mingle with the flock at the same time, they will fight until one of them becomes boss, after which he will do most of the mating and the flock will be very little better off so far as the fertility is concerned than if it had a single male.

### Eliminate Bedbugs

The best method of eliminating bedbugs from a hen house is to first thoroughly clean the entire house, getting out every little speck of both dust and straw. After this thoroughly cleaning, the walls and perches should be painted with carbolineum, and the rest of the house sprayed with a 20 per cent solution of soluble stock dip. If this application is done thoroughly, it will eliminate all of the live bugs, but probably will not affect the eggs. The second application is necessary.

### Yellow Corn Best

Yellow corn is especially valuable for winter feeding on account of its fattening qualities and vitamin content. If possible, at least half of the grain feed should be yellow corn. If white corn, wheat, kafir, or other farm grains are fed instead of yellow corn, alfalfa should be added to the rations to help supply vitamins. Alfalfa leaves or alfalfa meal will replace the vitamins of yellow corn if the latter is not available. The winter ration must contain protein.

### Displaced Labor

When the sewing machine for shoes was first introduced one man could do as much as sixty had done before by hand.

### "As Ye Sow"

A good deed is never lost; he who sows courtesy reaps friendship, and he who plants kindness gathers love.—Rasul.

## The DURHAM

**Braves Barnyard  
Acids!**

*A Non-Slip Crack-Proof Shoe  
Made Especially for  
the Farmer*

You've had shoes that broke out and cracked right above the sole because of the ammonia and other acids in manure—ruined long before they should be. No need to have this happen again. Ask your Red Wing dealer for the "Durham" and this trouble ends. Its uppers are "barnyardproof"—vegetable-tanned by a special process. No cracking or breaking from barnyard acids. In addition to this, it has the famous All-Cord Gro-Cord soles, found only on RED WING shoes, which means a sure, non-slip footing. You can walk on wet grass or any slippery surface with ease, and with all the comfort in the world, since this sturdy shoe is built over the roomy Munson last. Priced right. Sizes 5 to 12.
