Swift Justice in Marshall County

By Don A. Bunner

Marshal County has shown her efficiency in meting out justice to criminals by the action taken in the case of Riley Shireman, alleged confederate of Melvin Whitesell. Four days after his apprehension Shireman was entered in the state reformatory on a charge of conspiracy to commit a felony with a sentence of two to fourteen years. Although Whitesell was alleged to be the worst of the two and booked on a more serious charge, no particular action of juctice has been taken to justify his unsocial behavior. We are hoping that Kosciusko County will show foresightedness by swiftly dealing with him in a most severe manner, thereby, preventing the county from being a heaven for the scum of the earth.

The shooting of a week ago has at least accomplished one good. The city of Warsaw has been contemplating the purchase of bulletproof vests for their officers and almost as soon as the powder smoke had cleared and Chief Pittenger had had his wound dressed, the concil signed the order for the vests. Not to be outdone by the Warsaw City Council, the County commissioners hastily met and followed the precedent set by Warsaw and signed an order for bullet-proof vests for her law enforcers. Although their eyes had to be opened by an almost fatal shooting, it must be a wonderful feeling of protect ion for the officers to know that they will not be subject to such great risks in future gun battles.

Due to the great power and effect of hero worship, a number of towns are clamoring for credit for the parts played by their native citizens in the farnous man hunt. One prominent Kosciusko County paper seems to credit Chief Pittenger with most of the glory, while it is alleged, by others, that he was merely the one who so foolishly stuck his head through the trap door to be shot. It is lucky for Pittenger that he is not a martar today rather than a hero. However, we must give him considerable credit because he has proven to us that we at least have one officer that is not afraid to perform his duty.

American Farmer Is Handling Only One-Half of His Own Business

By P. L. BETTS, Expert on Farm Economics.

The farmer hasn't kept up with improving business methods. He has let some one else take over the selling end of the business of farming, where most of the money is made. He is permitting the other fellow to take profits the farmer himself should have.

Big businesses are merging, because by consolidating they can do things in a bigger way and produce greater dividends. What is the farmer doing? He is trying as an individual to compete with scientific business.

The farmers need to take over the other half of their business, the olling end, which they have let get away from them.

We farmers have made millionaires of those who own the other half of our business. Typical Américan and Christian Governed by Ideals Not Appetites

By REV. DR. JOHN McDOWELL, Presbyterian.

Character is the only foundation upon which we can build a republic. Conscience, not science, is the only adequate basis for a democracy. To speak of our American ideals with no reference to American religious faith is a thin and shallow interpretation of the nation's soul. A nation can exist without religion, but it cannot live without it.

The present situation in America creates and deepens three compelling convictions.

First-There is no hope for Americans apart from the Kingdom of God. No new political system, no new educational system, no new industrial system, no new social system apart from the Kingdom of God can ever save America.

Second—There is no hope for the Kingdom of God apart from the Christian church. Other institutions will help the church, and for their help we are profoundly grateful, but not one of them will take full and primary responsibility for bringing the Kingdom of God—the kingdom of righteousness, peace and joy—into the life of America. The school will not take it, the college will not take it, the legislature will not take it, congress will not take it, the court will not take it, the public press will not take it. If the Kingdom of God is to come into our American life, the Christian church must take primary and full responsibility for bringing it in.

Third—There is no hope for the Christian church apart from an efficient, consecrated leadership and membership which possesses the following qualities: vision, knowledge, conviction, co-operation, sacrifice and character.

World Today Has Many Men of Faith Comparable to the Biblical Heroes

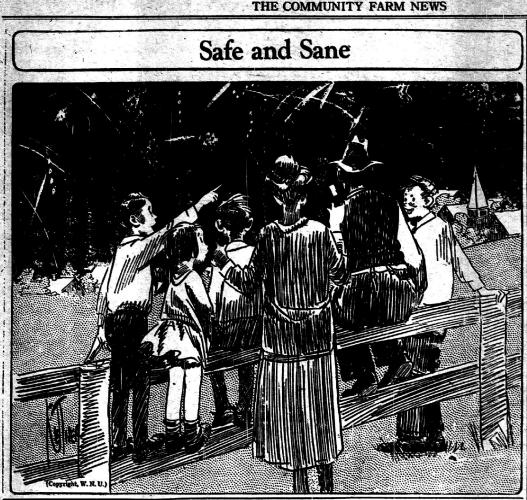

By REV. C. E. JEFFERSON (New York), Congregationalist.

Doctors, scientists and peacemakers are men of faith comparable to the Biblical heroes. Men of faith are not confined to the Bible or past history. We have groups in the world today who are heroes in the world of faith. Of these are the men who are working day and night to find a cure for cancer. Another are the engineers who are churting the log to perfect commerce in the air. Others are those working for a united church. Then there are the peacemakers, working for the abolition of war.

Many people do not know what faith really is. Faith is building on the invisible in order to accomplish the impossible. It is a thing of action, not a state of feeling. Most people connect faith with some the ological belief about the Bible. Noah had faith, but there was no Bible in the ark. Enoch walked with God, but there was no book in his hand. So it is possible for men today to walk with God without a book to rely on.

It is true that faith # invisible; but scientists are working every day on foundations they don't see and never will see. No one has ever seen an atom, an electron, or wireless wave, yet we know they exist.

DON A. BUNNER, Associate Editor.

HARRISON ITEMS

Willard E. East, trustee, made a business trip to Mentone Monday.

Harold East spent a few days with Deverl Bowser near Mentone.

James Black has gone to South Bend to visit his son, Vernon and family.

A number of people from this community attended the free movies at Mentone Thursday night.

Ruth, Maxine and John Byrers of Warsaw have returned home after a visit of a few days with their grandparents, Mr. and Mrs. Willard East,

Mr. and Mrs. Geo. Dickey were called to Elkhart Wecnesday to be with their son, John, who was in an accident that mashed his foot and left him other numerous bruises. They report him to be improving

Joseph Huffer of South Bend who spent the week end with his brother Edward and wife has returned home.

Mrs. Iva Howard and little son Verlin, of Converse spent a few days with her parents, Mr. and Mrs. Lloyd Lowman.

Mrs. Robert Wagner of near Warsaw and Mrs. Pearl Ring of near Claypool were the guests of their parents, Mr. and Mrs. Alva Bowser for one day last week.

Mrs. Ray Tucker and son Bobby of Burket visited with her parents, Mr. and Mrs. Chas. Baum. She was accompained home by her brother, Franzil.

MENTONE ITEMS

Mrs. Lizzie Morgan of Warsaw visited in Mentone Saturday.

Leanore Laird of Tippecanoe is attending Winona Lake summer school. For the past two years she has been teaching school in Alabama. Abe Mollenhour of South Bend visited relatives in Mentone Sunday...

Mr. and Mrs. Allen Borton of Fort Wayne were visitors in Mentone Saturday.

Mr. and Mrs. Mary Blue of Fort Wayne are spending a few days with Mrs. Lizzie Hibschman

Frank Mickey and wife of Roch ester and Rosella Busenburg were week end guests of Mr. and Mrs. Oliver Severns.

Mr, and Mrs. Howard Hudson and family of Fort Wayne spent the week end with relatives in and around Mentone.

Mr. and Mrs. C. W. Sheidler and family and Frank Gleason all of Elkhart were entertained at the home of M. A. Smith Sunday

Mr. and Mrs. Floyd Halterman and daughter, Betty Lue and Mr. and Mrs. Ray Dillingham and daughter Georgia spent Sunday in South Bend with Hess Dillingham.

MENTONE ITEMS

Mrs. Orlando Meredith and daughter, Margaret Esther, of near Burket were callers in Mentone Friday.

Mr. and Mrs. Russel Arnsberger and family of Illinois spent the first of last week with Isaac Jefferies and family.

Mr. and Mrs. Chas. Black and Mr. and Mrs. Orvin Heighway were the guests of Mrs. J. R. Black at a six o'clock Sunday dinner.

Mrs. Zolman and daughter, Pauline, of Long Beach California, will spend the summer vacation with her mother, Mrs. Alice Perschbacher.

Kenneth Mollenhour who is attending school at Fort Wayne spent a few days last week with his parents, Mr. and Mrs. Miner H. Mollenhour.

Mr. and Mrs. John J. Latham and daughter Charlene and Mrs. Grover Janke and daughter Mary Ella of Atwood attended the Wedding of Mr. Fred V. Bohner and Miss Mildred Josephine Hubler of Fort Wayne.

New Grocery

Mentone is to have a new merchantile business in the form of a new grocery which will be opened by Ray Dillingham in the Dunlap building in the south part of town Mr. Dillingham has been busy the past week outfitting the building and making it suitable for the new enterprise. This new addition to the Mentone business world makes Mentone take on a city aspect with neighborhood stores in its suburban districts. Clifford Sult will continue his auto repair business in the rear of the building.

Sinclair Oil Co. Expands

The Sinclair Oil Company are expanding their facilities in Mentone by the addition of two new storage tanks and a new warehouse! This will make them capable of handling two more kinds of gasoline and give them storage, room necessary for their oils and

greases. It was only a few months ago that the Sinclair Oil Co. acquired their present storage tanks from Carter Bros. Since that time R. A. Arnsberger has been the manager for the Sinclair Oil Co. in this city. We understand that Manager Arnsberger was very instrumental in securing this expansion for Mentone.

Local men employed by the company for this expansional work are Mervin Jones, Chas. Latham, and Albert Sears.

TALMA ITEMS

Paul Cormack of Peru was a visitor here Wednesday.

Mrs. Jerry Bryers, who has been ill for some time is improving.

Lavoy Montgomery was in Rochester on business Monday afternoon.

Mr. and Mrs. Lou Groves were the supper guests of Mr. and Mrs. Artie Eaton Thursday evening.

Mrs. I. H. Imler of Logansport has returned home after a visit with her mother, Mrs. S. Y. Groves.

Mr. and Mrs. Fred Safford and sons Ted and James, and S. Y. Groves visited relatives in South Bend Thursday.

Peculiar Friendship

There are no friends more inseparable than pride and hardness of beart, humility and love. falsehood and impudence.—Lavater.

Washington Saw Balloon

When the aeronaut Blanchard made the first balloon ascension in America at Philadelphia on January 9, 1793, President Washington went to the field early to witness the inflation of the balloon and to give the aviator a passport.

Island Seldom Visited

The little island of Tristan de Cunha is in the south Atlantic, midway between Buenos Aires and Cape Town. It is off the main routes of ships and is seldom visited except by occasional cruising vessels. This longly island has about 150 inhabitants.

Youth's "Wild Oats"

The wild oat, a tail grass resembling the cultivated oat, is a common weed in England. Originally "sowing wild oats" meant sowing worthless seed, or seed that would produce a worthless crop. Figuratively sowing wild oats cause to mean committing youthful excesses with subsequent reform usually implied.

IMPORTANT TEST

Necessary That Milk Dealers Be Able to Judge Quality.

"It is just as necessary for the dairymen to understand the significance and application of bacterial counts in the production of sanitary milk as it is for them to understand the use and significance of the milk fat test," said Robert S. Breed of the Geneva experiment station.

Doctor Breed cited two uses of bacterial counts in New York state that affect the dairyman's pocketbook intimately and directly. "One of these," he said, "is the use being made by public health control officials and less frequently by milk dealers to judge the sanitary quality of milk. When results of these laboratory examinations are unsatisfactory, they are used as a basis for bringing pressure directly or indirectly upon the dairyman to improve his equipment and methods of handling milk. The second use touches the dairyman's pocketbook directly inasmuch as premiums are being paid at many grade A milk plants for milk having bacterial counts of less than 25,000 or less than 10,000 per cubic centimeter. Failure to meet these standards causes the loss of premium money that really represents the greater part of the profit to the dairyman."

"Dairymen should familiarize themselves with laboratory methods whose use affects their business so intimately. Payments of premiums for high class mith is sound providing the basis used in determining premiums is fair and equitable. No more satisfactory system of paying premiums has yet been devised than to pay them on the basis of bacterial counts,"

To assure milk of pleasing flavor the dairyman should not give his cows until just after milking any feed likely. The dinner was in honor of their to taint milk. . . .

Cows giving milk which tests from 3 to 3.5 per cent fat should get one pound of grain for each four pounds of milk produced. . .

Good pasture, good legume hay, good ground grain will make a good cow do her best, provided you let her have plenty of good drinking water at all times

It is necessary to root out from the pasture all weeds likely to taint milk: until this is done, remove the cows from the pasture several hours ht fore milking or keep them off the nusture.

PALESTINE ITEMS

Russel Huffer and family were in Mentone Thursday evening.

Sammie Secore and family of Burket spent Friday evening with Mr. aud Mrs. Riley Secore.

Mr. and Mrs. W. C. Cochran of Burket and Mrs. Arville Fisher were Warsaw callers Tuesday afternoon.

Mrs. Louis Eaton and Mrs. I. D. Fisher spent Wednesday with Ott Jefferies and family of near Mentone

Roy Collins and family of Macy who have been at Roy Sloan's cottage for a few days returned home Saturday.

Mr. and Mrs. Edward Sarber and son Edward Lee of Hammond are spending a few days with Mr. and Mrs. Lee Sarber.

Seth Fisher of Elkhart is spending the week with Riley Fisher's of Palestine and Mr. and Mrs. Ed Baxter of Burket.

Virgel Hatfield, Mrs. Arvilla Fisher and Mrs. Pauline Leiter attended the free show in Mentone Thursday evening.

Mr. and Mrs. Huva Hagens and Mr. and Mrs. Paul Wright of Mt. Vernon, Ohio are spending a few weeks in Roy Sloan cottage

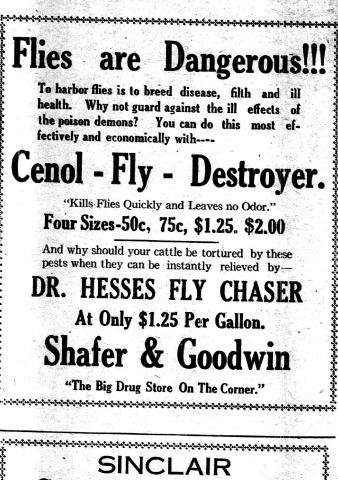

Mrs. Nancy Cochran and Miss Francis Cochran left Tuesday for Elkhart and Niles Michigan where they will visit friends for a few days.

Mr. and Mrs. Huva Hagens entertained at their cottage, Mr. and Mrs. Paul Wright, Mr. and Mrs. Ephram Altenburg, Mr. and Mrs. K. B. Holt and son Murray and Harley Boganwright at a six o'clock dinner Wednesday evening daughter, Mrs. Wright, it being her twenty-fifth birthday. She received many beautiful gifts.

Getting Worse All the Time THE transcontinental fiver had pulled out from Chicago for the long run to the coast and the con ductor had made his rounds, when the passengers in one of the coaches be came aware of signs of concern on the part of a fellow traveler. This was an elderly hearded man in old fashioned garb and of fatherly aspect He sat with his head in his hands muttering to himself in Yiddish and at Intervals uttering low moaning sounds They sympathized with his grief and among themselves wondered what

and anong the common theory was that the poor old fellow must be on his way across country, hoping, to reach the bedside of some dear one who was in sore affliction. Or, pos sibly, he was going West to attend a funeral.

Next morning, as the train entered Kansas, his grief seemed greater even than it had been the night before. He groaned almost continuously, beating himself gently on the breast and at intervals exclaiming: "Oil Oi!"

This continued all through that day and the day following. The patriarch seemed so alone in his sorr.w; so completely desolated Kindly eyes re garded him and all on the train wished they might do something to soothe him and comfort him. But he was a stranger, and after all, there wasn't anything really they could do: besides, they felt it was not proper that they, who never before had seen him, should intrude yoon his distress

Finally, though, on the next after noon when they were crossin; south ern California and were within a few score miles of Los Angeles, one bighearted man could contain himself no longer. He approached the seat where the old man sat in a huddle of misery and extending a cordial hand, he said

"Sir, I do not know you. I do not wish you to thirk that I am inquisitite but I have been sorely moved by your distress and perhaps row that we are approaching our destination I can be of some small assistance to you is there anything I can do?"

Tears gushed from the old mans eyes as he mutely shook his head. "I'm so sorry. Pardon me for ask

ing, but have you suffered a personal bereavement?" The ancient shock his head in the

negative. "Is it worse than that even?"

A nod.

"Well then, what is the matter?" "Listen, Meester, t'ree days already 1 am on der wrong train!"

(C by the McNaught Syndicate Inc.)

Mrs. Vernon Jones was in Warsaw Wednesday.

Miner Mollenhour was in Fort Wayne Thursday on business.

Mrs. Charles Emmons was in Warsaw Thursday on business.

Mrs. Frank Warren was a Sunday guest of Dr. Sarber in Chicago.

Christian Sarber of Fort Wayne was in Mentone over the week end.

Mrs. Ethyl Shafer visited with Dr. and Mrs. Walter Shafer in Lafayette last Sunday.

Doris Louise Flen ar daughter of Mr. and Mrs. Seth Flenar is quite ill at the present time.

Raymond Weirick has a sore foot as the result of running a wire through his foot.

Mr. and Mrs. Allen Long were Sunday guests of Mr. and Mrs. Rudy Bryant at Rochester.

Mrs. Austin Blue who has been on the sick list for the past several months is slowly improving.

Miss Margaret Mentzer was at Winona Lake the first of the week the guest of Miss Eldora Boggess.

Mrs. Don Arnsberger and son, Martin Clark visited in Chicago last week with Mrs. Chleo Kaiser

Mr. and Mrs. Bert Holloway spent the week end with Mr. and Mrs. Irvin Holloway in Fort Wayne.

Miss Mary Jane Borton was the guest of her sister, Mrs. J. R. Hatfield in Kimball, Ohio, last week.

Mr. and Mrs. James Case and Mrs. Ed Turner were guests of Mr. and Mrs. Isaac Sarber Wednesday.

Mr. and Mrs. William Romine and daughter Delores Madeline, spent Thursday with Mr. and Mrs. James Romine.

Mrs. Everett Clabaugh and daughter, Dona Rae and Mrs. Frank Fisher spent Thursday in Warsaw and Atwood.

Mr. and Mrs. J. R. Hatfield and family of Kimball, Ohio visited with her parents, Mr. and Mrs. Ira Borton for a few days last week.

Ventilating System Is Important for Stable

Avoid damp walls next winter by starting now to put a ventilation system in your stable, says A. M. Goodman of the New York State College of Agriculture. Build the out-take flue from the mow floor to the eaves now while the mow is empty.

A good natural draft dairy stable, ventilation system must have at least one tall out-take flue. This should: start about fourteen inches above the stable floor, and extend to a point about eighteen inches above the highest part of the roof of the barn. This flue or chimney may be built either inside or outside of the barn. If a farmer plans to have the flue pass up through the hay loft, as is the. most common practice, it should be built up from the mow floor at least as high as the eaves of the barn while the mows are empty or nearly so.

Actual Performance Is **Real Test of Machines**

Actual performance on dairy farms, is the real test of milking machines. It has proved a labor saver in many medium and large-sized herds and has been adopted by thousands of the best dairy farmers in every dairy state. This leaves little room for any objection on the ground that it might influence production adversely. Only if it is handled improperly or carelessly or is in poor mechanical condition will the milker fail to get most of the milk.

Compared to good hand milking, the milking machine can claim no advantage on the basis of its effect on production.

Good Cows Best

In a dairy experiment run in Stephenson county, Illinois, it was proved that the feed cost of making 100 pounds of milk in the high-producing herd in the test, which averaged 11,195 pounds of milk, was 63 cents, as compared with \$1.05 for the poor producers of the test which averaged 4,980 pounds of milk. The high producing herd of ten cows were partly purebred and partly grade Holsteins which would prove that poor cows are the most expensive.

Dairy Facts

Have the cow fat when she freshens.

Dairy cows producing heavily should be fed three times a day. . .

Rutabagas make excellent feed for cows. Twenty pounds can be fed daily to an animal. .

Lifter carriers and manure spreaders are of course great labor savers on the dairy farm.

Automatic drinking cups in the dairy barn pay for themselves quickly for the cows will produce more milk.

For Our Benefit

Ever increasing crowds are taking advantage of the free shows that are being given by the merchants of Mentone each Thursday evening, and judging from current comment, it seems that the shows are appreciated too. Since the shows are given for the entertainment of everyone and since there is always plenty of room, there is no reason why the crowds should not continue to increase in numbers. The show last Thursday night, entitled "The Speed Cop" was a very good one and one which no one should have missed. But if you did, you can and should plan to attend the show next Thursday evening.

A further entertainment that the merchants are offering to the people is the weekly band concerts They have been put to considerable expense to secure the Citizens Band, of Rochester for these concerts. This band has a high repu tation for giving quality programs In the programs that they have favored us with, they have proven themselves to be able musicians and quite worthy of their reputation and praise. Don't forget to come to come to Mentone next Saturday night to hear them. If you do, you will be convinced of the high quality and value of the concerts.

As a accomodation to the farmers the merchants are keeping their stores open every night in the week. It is no more than right that the people should show their appreciation, for the favors they are given, by patronizing the merchants that are making the entertainments possible. By so doing they will be given encouragement. to give larger and better entertain ments in the future. It is wholly a community problem, each pulling together for the benefit of all. Why not get into the spirit of the thing and carry your share of the load?

Dairymen Gain by Better Ways

Increased Butterfat Production Brought About by Right Feeding.

(Prepared by the United States Department of Agriculture.)

Owners of dairy cows in California have added \$64,297,051 to their income over a period of seven years by raising the average butterfat production per cow for the entire state from 183 pounds in 1920 to 239,2 pounds in 1927, says B. H. Crocheron, director of co-operative extension work in California, in a statement submitted to the United States Department of Agriculture.

On Way to Goal.

At the beginning of the effort in 1920 the California extension service set up as a goal, to be reached in ten years, a state average production of 265 pounds of outterfat per cow. Seven years' concentration on a dairy improvement program, including proper feeding, breeding, and cuiling, has brought them well on their way to accomplishment of the goal within the time set.

During the seven years the number of cows under test in the regularly, organized cow-testing or dairy-herdimprovement associations increased from 30,000 to over 70,000. The work of these associations is the basis for the improvement program. From the testing records is derived the hiformation necessary for proper feeding, able animals in the herd.

Other Big Factors.

Other factors in bringing up the average in butterfat production have been competitions both in individual production and community records, efficiency studies of individual herds, use of better breeding stock, improvement of health of herds, provision of: better facilities for care and management of herds, and the introduction of better management methods and better stock through the dairy work of boys and girls who are members of 4-H clubs. Only the sustained effort of the extension shall and dairy cattle owners on a long-time program, however, Director Crocheron believes, has made it possible to thus move forward the entire production of a state and, collectively influence the average of over half a million animals.

Alfalfa Pasture Great Help in Producing Pork

Alfalfa pasture will produce more pork per acre on the average than any other forage crop. It is one of the earliest pasture crops to be available in the spring and if kept clipped when necessary during the summer, it will provide good forage until late in the fall. Under average conditions an acre of alfalfa will pasture from 10 to 20 shotes, depending on the conditions previously mentioned. It should not be pastured too closely as it does not stand very heavy foraging. It prob ably would be best to pasture it in such a way as to permit the cutting of two small crops of hay during the season in addition to the pasture furnished. Alfalfa is a crop that is high in protein and mineral matter, both of which are very necessary in animal growth and which are decidedly lacking in corn, the feed that forms the hasis for practically all hog rations. For this reason alfalfa is doubly valuable as a forage crop.

Testing Seed Oats for

Germination Is Advised

Testing of seed oats for germination is advised by L. F. Rickey, of the University of Illinols, who says that samples of seed oats received at the university have shown a great variation in germination.

Quite a few oats were "bin-burned" in storage and the heat so generated was sufficient to destroy the life of a large part of the oats. Samples tested at the university tested as low as 9 per cent.

A quick test of 200 or 300 kernels in soil or moist cloths may be made in the house, an assurance thus secured as to the vitality or lack of vitality of the seed before planting.

crip the young pig's wolf teeth.

Good ensilage is a long step toward economical milk production.

Be sure you have enough room in your brooder house for your chicks. Overcrowding results in heavy losses.

Not all plants need a "sweet" soil: some do better in a fairly high degree of acidity. It pays to know your plants.

Male birds help to spread bacillary white diarrhea among poultry, although the disease does spread without males.

Cultivate your orchard as soon as the ground is workable to kill the grass and weeds and to free the nitrogen supply which helps early growth.

• • •

No stock tonic will cure abortion. Immunity to the disease develops raptidly in the bodies of infected cows. As a result of this immunity most cows will calve normally the year after an abortion.

Mr. and Mrs. Perry Sarber of Plymouth and Mr. and Mrs, Marion Latimer called at the Austin Blue home Monday afternoon

Mr. and Mrs. Elmer Fultz. of near Pierceton, Mrs. John Fultz, Mrs. Dunkin and Mr. and Mrs. John Fultz, Jr. and son. of near North Manchester, called on Mrs. Lydia Rynearson Sunday morning.

Mr. and Mrs. John Fultz, Jr. and son, Mr. and Mrs. Mrs. Elmer Fultz, Mrs. Lydia Dunkin, Mrs. John Fultz, Mrs. Lydia Rynearson and Mr. and Mrs. John Landis and son enjoyed the day and a bountiful dinner last Sunday with Mr. and Mrs. John Shaffer and family.

Chas. Hoover of Peru Fred. Squires and Clinton Ostheimer of Wabash were the guests of Wendell Anderson Sunday evening. They were enroute to Rochester but were prevented from reaching their destination on ac ount of a serious auto accident which they had near Mentone. The young returned home Monday men morning.

LAMBS FAVORED

Young Animals Are Ready Quicker and Weigh More.

Three-fourths of the annual income from sheep raising may be realized from the lambs if they are handled properly and creep-fed, says S. F. Rus sell of the Missouri College of Agriculture. It is because of this fact that the college has developed the Missouri plan of sheep movement, which has for its goal the production of mar-ket-topping lambs. The plan is being followed intensively in northeast Missouri. In this section of the state, including 22 counties, there are 405.000; head of sheep. This is nearly onehalf of the total number in Missouri,. and 100,000 head more than in the en-! tire state of Tennessee.

The major portion of income from these flocks is from the production of market lambs. During the same period wool has sold at 35 to 40 cents a pound and returned about \$3 per fleece. A comparison of these two sources of income from sheep raising shows the importance of developing the lamb industry.

One essential that will help to produce top lambs is creep-feeding. A desirable grain mixture to start lambs is one consisting of two parts cracked corn and one part bran. When lambs are about two months old reduce gradnally the bran content of the ration until it is eliminated and feed six parts shelled corn to one part peasized linseed-oil meal until lambs are marketed. Here are six reasons why creep-feeding pays:

1. Lambs will be ready for market two weeks sooner and will weigh five to ten pounds more per head.

2. They will shrink less in shipping. 3. Fewer "culls" will be produced. 4. They will dress a higher percent-

age.

5. They will bring more dollars to the producer, because fat lambs are in greatest demand.

6. They will make more economical use of the grain they consume than at any other time during their lives.

In creep-feeding lambs the following sentials should be carefully observed: (1) Put creep, if possible, in shed where sun shines. (2) Have your creep ready for use by the time first lambs are two weeks old. (3) Keen troughs clean. (4) Feed all lambs will eat. (5) Don't stop the grain when the ewes are turned on grass.

Sand in the Missouri

One thousand cubic feet of water of the Missouri river has been known to contain 147 cubic feet of sand.

Mineral Mixtures Are

THE COMMUNITY FARM NEWS

Beneficial to Swine The following mineral mixtures for bogs are recommended by Carl P. Thompson of the animal husbandry department of the Oklahoma A. and M. college for those who wish to mix their own:

(1) Air-slaked lime or ground limestone two parts and common salt one parts; (2) bone meal, spent bone black or bone flour two parts and common salt one part; (3) wood ashes two parts and common salt one part; (4) air-slaked lime or ground limestone, one part, bone meal, bone black or bone flour one part and common salt one part.

Thompson recommends that the mineral mixture be placed before the hogs at all times to permit them to eat what their appetites call for. If it is desired to put the mineral in their feed add one pound of the mixture to 100 pounds of feed.

Market Discriminates Against Heifer Calf

The market seems to discriminate against heifer calves and apparently quotes higher prices for steer calves of equal finish and quality. Very often such difference in market price results from the fact that the heifer: calves have been on full feed too long. If they had been marketed 30 or 60 days sooner, they would have returned a greater profit. Heifer calves, which are full fed on grain as long as steer calves, will carry more surface fat as well as more internal fat. Their carcasses are not. as desirable.

Avoid Market Losses

When ready for market, hogs should he assembled a sufficient length of me prior to the date of shipment to low them to become rested. They uld not be crowded into small pens houses nor fed heavy rations. If v are driven to the loading point v should not be rushed on the way. · loading chutes should not be too ep, should be made secure, and have e sides protected so that the ani-als will not fall off.

Oil Kills Lice

It is not much trouble to get rid of lice on hogs, since either crude oil or the waste oil taken from the crank case of your car will do the job. Sprinkling with a garden sprinkling pot or a sprayer is a convenient way. It is a good plan to put all the hogs in a pen or stall with just room for the hogs to crowd in close together. Then sprinkle them well over their backs and sides. The oil will spread entirely over them if they are left in the pen two or three hours.

At the Massachusetts experiment station the addition of potatoes to a balanced ration containing no silage increased the milk production. Their conclusion was that raw potatoes fed to dairy cattle up to 25 pounds per day per head was both safe and practical.

Favor Sodium Fluoride to Destroy Parasites

Sodium fluoride ought not be used on setting hers just before chicks or poults are hatched, because this chemical does act as a very positive irritant to the lungs and breathing apparatus of the young birds. Blue ointment is a much better agent to use for controlling lice on setting hens, but for best results it should; be used a week or ten days before the hen is set.

It is possible, of course, that the breeding birds which produced the turkey eggs were a little low in vitality, or perhaps they were overfat. Generally, yearling males mated to earlyhatched yearling or two-year-old hens, will give better results than matings of old toms and old hens.-F. E. Mussehl, University of Nebraska.

Two Important Factors

in Development of Pigs Pigs which make good gains during, the suckling period will be ready for market earlier and usually return: greater profit. The two most important factors which determine the development of pigs during the suckling period are the ability of the sow to produce milk and proper sanitary measures to provide healthy con-ditions for the pigs. Sow differ in their ability to produce milk, and the poor milkers will have small, unthrifty pigs at weaning time. Pigs which make good gains during the suckling. period have a decided advantage over pigs raised by sows which are poor milkers. Strong, rugged pigs are most resistant to diseases and worm infestations.

High production means little unless it is accompanied by careful marketing. . . .

More fall milk is needed, and to obtain this more cows must freshen in the late summer and early fall.

Chicks should be fed not later than. 36 to 48 hours, or too much of the chick's vitality will be sapped by hunger.

If you haven't already done so, look over your machinery and be sure that it is all in good repair. Keep repair parts on hand. . .

Farmers who use a large number of electrically driven devices on their farms report that they save the cost of many days of hired labor.

A combination by weight of two parts standard middlings and one part cottonseed meal may be used to replace gluten feed pound for pound in the grain mixture for cows. . . .

An electric brooder should have provision for ventilation, insulation to conserve heat, and a positive regulator. Curtain types are cheaper to operate but ventilation is not so satisfactory.

. .

. . .

Waste Seed and Labor When Planting on Poor Land.

The one big drawback to dairy farming is a scarcity of good pastures.

A good pasture is one that furnishes an abundance of nutritious grazing," says John A. Arey, dairy extension specialist at the North Carolina State college. "On such a pasture a cow may get enough to eat without having to wander over a large area for it. Too many of our so-called pastures contain large amounts of woods and waste lands and are not much more than exercising grounds for our cows. Nearly all the food a cow gets from such a pasture is used up in producing the energy to get it."

In Mr. Arey's opinion, a pasture; should be regarded as a crop and so cared for. Grass seed ought to be planted on good land-land sufficiently fertile to grow good crops and then the weeds and brush kept down. If the sod is given an occasional topdressing of manure or commercial fertilizer, especially phosphates and nitrogen, better results will be secured.

"About all the attention most of our pastures receive is a little time spent in tightening the barbed wires on awet day," says Mr. Arey.

Seed and labor are both lost when planting is made on poor land. Sixty per cent of the average North Carolina farm land is listed in the census as unimproved but much of this land is fertile. However, it is now covered with underbrush and returns no income. Then, too, there is much rolling land in the Piedmont section that washes easily when cultivated. In other sections there are good bottoms which overflow too frequently to be safe for crops. All of these areas can be made into good pasture. Mr. Arey says that records from the local herd improvement association show that pasture has a value of from \$6 to \$10 per acre when cream from the cows so grazed is sold for butter making. The value is greater where milk is re-Italled.

Solidly Placed

The base of the Great lyramid covers an area of more than 12 acres.

Information for Sailors

An integral part of the United States navy is the hydrographic office. There are 19 branch hydrographic offices in the principal seaports of the country and its possessions, where mariners may obtain latest accurate information in regard to their churts and publications.

Mr. and Mrs. Peter Horn and daughter Dorothy drove to Elkhart Sunday. Mrs. Omar Horn and two children returned with them for a visit.

Mr. and Mrs. John Summe and Mr. and Mrs. Jacob Gross Sun- friend Billey of Silver Lake and Arron Wagner of Chicago were guests Monday evening at the Joseph Gross home. *

Marcella, Donnabelle, and Emerson Bryant of South Bend are visiting their grandparents, Mr. and Mrs. Clinton Ralston and Mr. and Mrs. Geo. Bryant.

The Four Cylinder Sod Busters of Newcastle township met last Wednesday evening with the other Farm Bureau quartettes of Fulton county for the county contest. The newcastle Township quartette was chosen the winner. This quartette will sing in a state contest at Indianapolis during the State Fair.

Watch Medicine Chest

A medicine chest stocked with emergency remedies should be part of the equipment of every household. It. need not be expensive. It should, however, be looked over now and again to see that nothing has spolled.

Death-Watch Beetle

Wood-worm is the popular name of this enemy insect, and some call it the death-watch beetle, from its habit of making a tapping sound in the woo work it attacks. No wood is safe from it. While it is generally supposed that it attacks only ancient houses, this is not the case, for it will sometimes appear in a perfectly new house and pro ceed to hore into the timbers. Roofs and floors are in equal danger, and li will eat a chair, a chest or a picture frame with the same zest.

Broccoli Is Kin to Cauliflower

Excellent Flavored Veget table Is Good Source of Calcium and Iron.

(Prepared by the United States Department of Agriculture.)

Broccoll is not a newly discovered vegetable, but until lately it was not, well known or widely grown. Of European origin, it has long been familiar to the French and Italian household, and it was doubiless introduced to Americans through these nationalities. Recently broccoli of the sprouting type has heen produced extensively in Texas and California, and has become very popular. It is now possible to obtain this excellent flavored green vegetable in the stalls of most large city markets.

From Cabbage Family.

Broccoli is one of the forms of the large brassica or cabbage family. Cauliflower, cabbage, brussels sprouts, kale, and kohlrabi are its nearest relatives, botanically speaking. Of these If is most like cauliflower. The flower head of sprouting broccoli unlike that of cauliflower, is not white, but deep green, as is the rest of the part that is cut for food. The stalk is long, leafy,* and branching. Because of this long stalk, some people have thought that sprouting broccoll must he a cross between asparagus and caulitlower, but horticulturists of the United States Department of Agriculture say this is not the case. When a first crop of flower heads has been cut from the plants, a second growth may be obtained.

The flower heads and the more tender parts of the stalk are enten. The lower end of the stalk is trimined off, so that sometimes there may be considerable waste in preparing broccoli for the table. Like any other green vegetable, it is cooked in lightly salted boiling water. The pieces are left, whole and should be carefully removed from the saucepan to keep them shaped by for serving. Broccoli usually becomes tender in 20 to 25 minutes cooking. It is then drained and served with melted butter or Hollandaise sauce.

Resembles Cauliflower.

Analyses show that sprouting broccoli is a good source of calcium, phosphorus, and iron in the diet, resembling callifower in this respect. About 89 per cent of the ed.ble portion is water, and the other 11 per cent, which is solid matter, differs but slightly in protein, fat, fiber, and ash content from calliflower. No vitamine studies have so far been made with broccoll, but probably, like other green-leaf vegetables, it is a good source of one or more vitamines.

Changes in Feed Must

Be Done Quite Slowly Chicks should be given the starter for the first two or three weeks but,

THE COMMUNITY FARM NEWS

as they grow they can handle a feed with more bulk to it, so mix the starter with a good growing mash, gradually changing the proportions until you are feeding the growing mash straight.

You cannot get a feed too good for young chicks as your egg yield will depend greatly on how your pullets are developed. The highest priced chick feeds on the market will cost you only about twelve cents a chick up to eight weeks of age.

Chicks need sunshine, plenty of range, good ventilation, both day and night, lots of green food and clean sanitary quarters.

Catch Weeds When Young to Improve Vegetables

Weeds in the vegetable garden can be destroyed with least effort when they are in the seeding stage, advises the Farm Journal. There is a great loss of ground seed and labor every year because many gardeners lose interest when the weeds get the best of the vegetables in the garden. Such a condition need never exist if the gardener will use cultivating tools which stir the soil to a shallow depth. When weeds are even slightly disturbed in their early growth just beneath the surface of the soil, they usually die.

Young Breeding Stock

Should Not Be Fattened Pigs retained for breeding purposes should not be fed and handled in the same way as those to be sent to market. Young breeding stock should be grown rather than fattened. Strong feet and legs and strong backs are more essential than fat in the development of gilts for brood sows. They should be fed only enough corn to keep them in a good thrifty condition. The rest of their feed should consist of shorts or oats with sufficient tankage or skim milk to balance the ration.

Considerable Damage Is Done Pastures by Stock

Considerable damage may be done to pastures by turning the stock on too early in the spring. If the pastures are projected until a cow can get a good mouthful, the forage will be much more vigorous and will stand much closer grazing. A much higher yield of forage will be obtained than where stock is turned in as soon as growth starts. The ground is often very soft in the early spring, and when to this condition, damage may he done from tramping and packing the sul.

Cow-Testing Increases

and Dairy Profits Grow

Cow-testing association work in Pennsylvania has expanded 250 per cent since 1924, I. O., Sidelmann of the Pennsylvania State college dairy extension service, said recently. In that year there were 8,224 cows tested while last year the number was 20,212. During the past five years the average milk production per cow in the associations has increased from 7,309 pounds in 1924 to 7,776 pounds last year. Twenty-five associations averaged more than 8,000 pounds last year, isix over 9,000, and three more than 10,000 pounds in 1928.

Butterfat production per cow also has experienced a steady increase under improved managgment and better breeding and feeding. Five years ago the mark was 280.9 pounds per cow. Last year the figure was 303.7 pounds. This was the second year in the history of Pennsylvania cow-testing work that butterfat production exceeded the 300 mark, Sidelmann reported.

The 1924 figure for value of product, was \$217.59 per cow while last year, it was \$246.87. Feed costs have fluctuated slightly above or below \$100 per cow for the five-year period. For each dollar expended for feed in 1924, dairymen in association work received \$2.20. Last year the returns amounted to \$2.41.

Mineral Mixtures Very

Important for Cattle

The feeding of mineral mixtures to dairy cattle is very important, for, dairy cows lose a large amount of mineral matter during the lactation period and do not store minerals at that time.

This is the statement contained in a report of the Colorado Dairy Herd Improvement association, by State Dairy Commissioner George E. Morton and C. A. Smith, fieldman, which has been issued by the Colorado Agricultural college.

Even when cows are on rations containing large amounts of minerals, it has been found that the addition of a mineral mixture helps prolong production a number of years, and insures a large and more rugged calf crop, the report states

A little steamed bone meal or a mixture of equal parts of crushed limestone, steamed bone meal and sait added to the ration will insure a longer perfod of production, healthler cows and decrease breeding troubles.

Breeding Bull Value

It is a well-known fact that the breeding value of a bull cannot be determined until his daughters come into milk. A bull may be well bred and still not able to transmit high producing ability to his offspring Yet it is the rule on the average dairy farm to sell a bull when his daughters are ready to show what they can do at the pail. Bulls are usually sold before their daughters are ready to breed. Farmers should exchange stres with each other.

Learning From Weakness

In many families the weakest has without knowing it taught the others to be strong and the most foolish has been the very text-book from which "thers learned their best wisdom.— Woman's Home Companion.

PALESTINE ITEMS

Earl Hill and wife, and Mr. and Mrs. Lyman Dunnuck spent Sunday in Wabash with friends.

Bruce Stoffer and family of Hammond and Mrs. Chipman of Disco were Saturday guests of M. E. Yocum and wife.

Mr. and Mrs. Earl Hill of Chicago visited with Mrs. Hill's parents Mr. and Mrs. Lyman Dunnuck over the week end.

Joseph Huffer and Mr. and Mrs. Clyde Verba of South Bend spent Sunday with the Charley and Edson Vandermark families.

Mr. and Mrs. John Cochran, Geo. Cochran, Wometa Whitsell of Elkhart, Mr. and Mrs. Walter Leornhardt and children of Portland Oregon spent the week end with Riley Fisher and wife.

HARRISON ITEMS

Bert Hatfield and wife were in Burket Sunday.

Elmer Lowman spent Sunday with his brother Lloyd Lowman.

Ed Stamates of Mishawaka was a Sunday guest of his sister Mrs. Ada Brown.

Isaac Horn and family were guests of their daughter Mrs. Russell Creighton of Atwood Sunday.

Chas. A. Baum and family, visited with Mrs. Baum's parents Mr. and Mrs. James Noel of Goose Lake Sunday.

Mr. and Mrs. Harry Mackey, Wm. Bremmer, Mr. and Mrs. Sankey Borris and little grandson Nelson Ringle spent Sunday with Sherman Anderick and wife.

Mr. and Mrs. Alfred Drudge of Bremen spent the week end with Mr. and Mrs. Alva Bowser. They were accompanied home by their sons, Lowell and Junior who have been spending the past several days with their relatives. Other callers at the Bowser home were Jesse Hatfield and Mr. and Mrs. Robert Wagner of Warsaw.

Took Benefactor's Name

Rutgers college, New Brunswick, N. J., was chartered on March 20 1770, as Queens college. In 1825 if was renamed in bonor of Henry Rutgers, whose gift to the college enabled it to reopen.

OVERFEEDING COW IS UNPROFITABLE

Most Common Error Is Giving Excess of One Feed.

Underfeeding of dairy cows is one of the most common reducers of profits for many dairy farmers. Overfeeding, however, may be just as unprofitable. A bulletin published by the South Dakota State college, "Feeding the Dairy Herd for Profit," points out that care should be taken to avoid the latter as well as the former.

To avoid overfeeding the bulletin strongly recommends that grain be fed according to milk production. "If the cow increases in production," it says, "increase the grain allowance. Continue increase the grain as long as there is an increase in production When no further increase in milk results from an increase in grain, it might be well to decrease the grain slightly and note if a decrease in milk results if this occurs the right amount of grain is being fed."

A common error in feeding is to overfeed on one or two feeds, thus giving the cow too much of one nutrient. For instance, when corn stoven and ground corn are fed in large amounts the cow is being overfed on carbohydrates. She can only utilize a certain amount of carbohydrates because of lack of protein. What she cannot utilize for maintenance and milk production she must throw off; hence, so far as the cow is concerned, this surplus carbohydrate is wasted. Those who feel that feeding accord-

Inose who reel that letting according to production takes too much time and is not practical, are strongly inrged to try it out. "It is safe to predict," the bulletin says, "that a material increase in milk will result from the same feeds when fed according to production rather than by allowing, the same or about the same amount, to each cow. This, of course, guards against underfeeding also."

Off Flavors Caused by

Weeds and Surroundings Off flavors in cream may be caused, by feeds and weeds, such as wild onion, garlic, leek, sweet clover, and ragweed. Flavor may be absorbed from the surroundings. For example, oll, gasoline, and vegetable flavors may cause trouble. Another class of flavors resulting from bacterial contamination are called stale, cheesy, yeasty, bitter or acid. - All of these off flavors result in poor quality of cream and cause a financial loss to the dairy farmer. They may be eliminated by keeping cows out of pastures which contain undesirable weeds, by handling and storing cream, in clean sanitary surroundings, and by careful methods in production and handling. Cooling of cream to 50 degrees Fahrenheit immediately after separation and frequent deliveries will help win the battle against poor cream.

Muddy Runs and Yards Encourage Parasites and Ills.

OF WET HOUSES

Get the chicks out of the mud. Long-continued sloppy weather, muddy runs and yards, furnish ideal conditions for the parasite which causes the disease coccidiosis, as well as muking things unpleasant around the brooder houses for the owners who take care of the flocks.

"The brooder houses ought to be moved to grass sod," says E. L. Dakan, head of the poultry department of the Ohio State university, "Even if the chicks are moved only 50 feet, from bare, muddy soil to grass, they will miss a lot of the infestation of parasites which have made their homes in the old runs where the grass has been destroyed."

Coccidiosis or white diarrhea results from the activities of a parasite which will infest the soil where chickens have been kept for a year or more. Sanitary measures which include moving the flocks away from the infested soil, have been found more satisfactory control measures than trying to treat the disease with medicine after it has started in a flock. Under the conditions which have existed for a month or more, the parasites have been flourishing.

For late chicks which are showing signs of rickets because it has been impossible on account of weather conditions to get them outdoors as much as they should have been, should have their cod-liver oil ration increased to 2 per cent of their feed, Dakan says, in order to counteract the lack of sunlight.

Quality Eggs Can Be Produced on Any Farm

Eggs unfit for food cost farmers from one to three cents per dozen. Approximately 17 out of every 100 eggs marketed are unfit for human consumption, according to the United States Department of Agriculture. This means a loss of about \$4.000.006 annually to farmers. An egg buyer of Clinton county, Indiana, recently reported to Purdue university that onehalf of the eggs delivered to-him were not good enough to eat.

Two principal causes for the large volume of inedible eggs are as follows: Improper care of eggs at the farm, and neglect in marketing them more frequently, according to E. R. Menefee of Purdue.

Quality eggs can be produced on corn belt farms if producers will follow the suggestions which he makes. Remove all the males from the flock immediately. Males are not necessary for egg production and fertile eggs will not keep their quality in warm weather.

Remove all broody hens from the nests promptly. The body temperature of a hen is 106 degrees and will reduce the quality of the egg in a few hours' time. Gather the eggs twice a day in hot weather and place them in a cool room promptly. A basement or cellar if not moldy or containing any peculiar odors furnishes about the best place on the farm for holding eggs.

To Distinguish Sex

of Guineas Is Hard There is no sure way to tell the male guinea fowl from the female by looks. Usually the wattles of the male are a little larger than the fe-

male are a little larger than the female's, but this is not always noticeable-nor is it true in every case.

But their cries are different, and will reveal which is which. The female has a two-syllable cry which sounds like "buckwheat, buckwheat," or to some folks "pet rack, pot rack." Anyhow it's a two-syllable cry. But the male has only a one-syllable sort of shriek. Sometimes too, he makes a chattering noise and often says "quit, quit, quit."

But don't try to tell the two apart when they're frightened or excited. Both the male and female then make the one-syllable cry.

Oats Cause Trouble

The use of ground whole oats containing an abundance of indigestible fiber has caused many losses among young chicks when such material has been included in the home-made starters. A laying mash containing a lot of ground oat hulls has less feeding value than a mash without so much fiber. There should be a good demand for hulless oats for chicken feed if they can be raised as economically and are as good feed as oats which have been hulled.

Remove Litter Daily

Daily removal of soiled litter from the henhouse is important. If the dampened litter is left on the floor, ideal conditions are created for spreading of disease. The soles of shoes that have come in contact with such litter should be disinfected. Contamination is easy unless every caution is used. This risk can be greatly reduced by wearing a special pair of rubbers and by having a pan of disinfectant outside the brooder house to use when entering an leaving.

Salt of the Earth

There are souls in the world that have the gift of finding joy everywhere, and of leaving it behind them when they go.—Faher.

Many Kinds of Bananas

Although the common yellow banana and the reddist plantain are comparatively well known, there are many other varieties, the Philippine islands claiming more than 50 kinds. Facts for Egg Producers WHO WANT "More Money for Eggs"

> Although there are more hens on farms, yet there will not be an over-supply of high quality eggs.

> More money can be had only by producing high quality eggs. We have the buyers and we pay for quality.

QUALITY Eggs

Are those which are of good size, clean, sound, strictly fresh and white yolks, ordinarily not more than two or three days old.

If you need further advice in producing quality Eggs get in touch with Mr. C. L. Manwaring, or with your State Agricultural College and the U. S. Department of Agriculture, at Washington, who are interested in this problem. Prices of ordinary eggs are low, but prices on high grade quality will continue to advance.

"Whiskers" on Red Clover Due to Bug

Potato Leaf Hopper Always Attacks Smooth Variety.

(Prepared by the United States Department of Agriculture.) Red clover in the United States grows "whiskers" that stand straight out from the stems of the plants, while in England the ancestral form of the

American type is still comparatively free from hairiness. In attempting an explanation of the change from the smooth to the hairy form, Dr. A. J. Pieters of the United States Department of Agriculture, says It is "necessary to turn to the wild red clover" to which all clovers are related and which shows a tendency toward hairiness. The possibility of producing hairy plants was therefore "in the blood" of the relatively smooth type brought from England more than 2005 years ago, he says. Furthermore a few rough hairy plants may have occurred in fields seeded with the English clovers.

When this English clover was brought to America it encountered, new conditions, among them a little insect not known in Europe and called, the potato leaf hopper. This insect damages red clover, especially the smooth forms, doing the most injurys to the second, or seed, crop, Doctor Pieters says. It always keeps down the growth of the smooth plants of European clovers grown in the United States so they will not seed well. The hairy American type is little affected, especially when there are smooth plants on which the leaf hopper can feed.

A reasonable inference, says Doctor⁴ Pieters, may be drawn from what is known to happen today, and from the known facts the most reasonable answer to the question of why American clover is hairy is that the constant attacks of the leaf hopper carried on for more than one hundred years gradually eliminated the smooth form by keeping down the production of seed, while the rough hairy form produced, more seed than the other, and so constantly increased.

The man who is going into the dairy business today wants animals with authentic production records behind them.

Always Make Fowls as Profitable as Possible

There is a great temptation for the poultryman who is ambitious to equal the records made by others. Naturially any one wants to make his hens as profitable as possible, and as the rule generally applied is to keep a hen only to the end of her first laying year and then replace her with pullets, the effect of high egg production on the laying hens apparently is neglicible as size is sent to pot before any evil effects of force feeding can interfere with her laying.

TALMA ITEMS

Zimmerman Bros. of Rochester were here on business Thursday. Howard Tabey left Wednesday

for South Bend where he will be employed.

Mr. and Mrs. John Alber of near Tiosa called on Miss June Dick Friday forenoon.

Mr. and Mrs. A. J. Blakley of Rochester were the guests of O. C. Montgomery Friday.

Born to Mr. and Mrs. Donald Barrett Thursday evening, a daughter, named Marjorie.

Mrs. William Runkle has been called here on account of the death of her sister Mrs. Mary E. Hisey.

Mrs. Anna E. Robinson of South Bend was called here by the death of her mother, Mrs. Mary E. Hisey.

Miss Olive Goplen returned home Friday after spending several days visiting Mrs. Estil Fish and family in Fort Wayne.

Mr. and Mrs. Ralph Smith and daughters of Lansing Michigan are expected to arrive this week for a visit with friends and relatives.

The 4H Girls Club of Newcastle township enjoyed a community dinner Friday on the banks of the Tippecanoe river. In the afternoon a short business meeting was held. The rest of the time was spent in playing games.

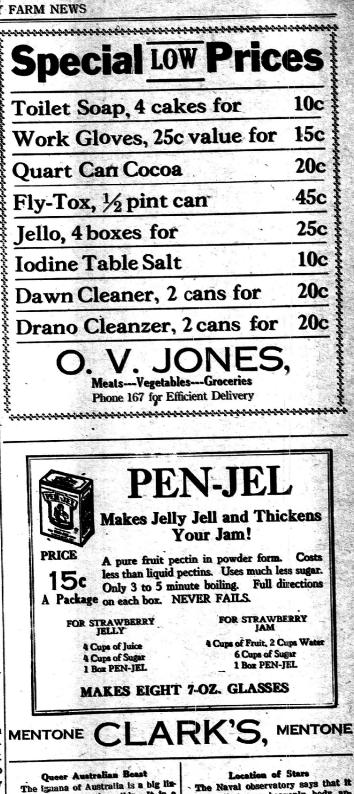

MENTONE ITEMS

Mr. and Mrs. J. Garwood have just returned from a vacation at Celina, Ohio.

Lowell Marquess spent a few days with his grandparents, Mr. and Mrs. James Marquess in Men tone last week

Chas. Shafer who underwent an operation at the Wesleyan hospital in Chicago returned home last week. He is able to be down to the store for a few hours each day

Roy Meredith of Akron who has been attending school at the University of Chicago has returned home to visit his parents, Mr. and Mrs. Earl Meredith over Sun day. Roy taught school at Rossville Illinois last term.

The ignana of Australia is a big limard often seen in the wilds. It is a very versatile reptile that "can run like a horse, can swim and dive, shin up a tree, digs lis burrow and, when necessary, can fight like a demon." The ignana may go down its hole fo sleep for months; it can go foodless for weeks; at other times it will eat or swallow anything.

The Naval observatory says that it is true that any heavenly body appears to be in the place it occupied when the light by which it is seen left the body, not in the place it occupies when this light reaches the earth; but the difference in direction between its apparent place and its true place in so small as to be imperceptible to the naked ege.

DORAN ITEMS

John Creakbaum is on the sick list again.

Ivan Miller has purchased a new Ford Sedan.

Mrs. Dale Cook who has been ill is slowly improving.

The Theta Mu Club enjoyed a picnic at Culver Sunday.

Mrs. Fred Halderman is suffering from an injured foot.

Mrs. George Black made a business trip to Warsaw Thursday provided. afternoon.

Many from around here attended the play at Mentone Wedneseav evening.

Several from around here attended the skating rink at Silver Lake Sunday night.

Mrs. Ora Tucker is suffering with a very painful face caused from the extraction of teeth.

Mrs. Bernard Black spent Wednesday at the home of her parents Mr. and Mrs. H. V. Nellans.

Mr. and Mrs. A. E. Black were callers at the home of Lloyd Creakbaum Monday afternoon.

Mr. and Mrs. Bernard Black entertained Tuesday evening Mr. and Mrs. Ralph Tucker of Akron.

Mr. and Mrs. Ora Tucker and family were Monday evening callers at the home of Chas. Black

Mr. and Mrs. Lloyd Creakbaum spent Tuesday afternoon with their daughter Mrs. George Smith

Chas. Black and wife made a business trip to Peru Friday. Mrs. Edson Sarber accompained them.

Mr. and Mrs. Sam Eiler were callers at the home of Mr. and Paul. The early of his life will Mrs. John Creakbaum Tuesday evening.

Mrs. Thurl Whetstone was a caller at the home of Mr. and Mrs. Thomas Whetstone Wednesday evening.

Mr. and Mrs. H. V. Nellans attended a Poultry Banquet at Clay pool Wednesday given by Dr. Frank Tucker.

The small son of Mr. and Mrs. George Smith has been quite sick, with gland trouble caused from tonsillitis, he is reported better at this writing.

Mrs. Ott Jefferies and daughter Mrs. Lucille Fisher of Palestine were callers in Warsaw Thursday afternoon.

W. C. T. U. Picnic Dinner

The W. C. T. U. will have a picnic dinner at the home of Mrs. Lon Haimbaugh on Tuesday July 9th at 10 o'clock. Those that do not have means of transportation meet at Shafer and Goodwin drug store and conveyances will be

SHIPPING LOSSES MAKE LARGE ITEM

One of Big Faults Is Overloading Cars in Summer.

Losses sustained by swine producers of the United States in marketing; their hogs amount to the astonishing sum of more than three million dollars, yearly. This tremendous waste cam be charged directly to the carelessness of shippers and the negligence of, transportation companies. In the language of the day, "Something ought to be done about it."

"One of the biggest factors in causing these heavy losses is the overload, ing of cars, especially in hot weather," says E. F. Ferrin of the division of animal husbandry of the University of Minnesota. "This fault is chargeable chiefly to the carrier which compels the shipper to pay freight on a greater weight than can be loaded without risk. Cars in need of repairs cause cripping or damage to hogs in transit."

Holes in floors, nails projecting on the inside of cars, cleats on floors, and unsafe doors, are all minor causes of; loss which could be remedied by the railroad company. The carriers are further at fault in delivering unclean; cars for reloading, although an order of the Interstate Commerce commisision expressly provides that cars must be cleaned.

"But the carriers cannot be held for all the loss. The disposition of the shipper to take a chance induces the practice of overloading, improper bedding of cars, and neglect to remedy minor defects in cars delivered to the loading station. In shipments of mixed cars of cattle and hogs, flimsy partitions which break down result in losses. Proper bedding of cars will save much loss. In hot weather sand, soaked with water is by far the best material In very cold weather losses could be prevented by tacking one width of building paper-along one side of the car near the floor. This protection is necessary only on the side of the car which will be toward the north as the car is moved to market. Most of our live stock goes to market in an eastward or westward direction.

Render Assistance to

Sow When Farrowing At farrowing time the herdsman should be on hand to render assistince if necessary, but should otherwise not disturb the sow. In large herds it has been found an exceedingly profitable plan to have an experienced man nearby during the night

at this time to inspect the sows every three hours. The farmer with only a few sows will find that a few night trips to the hog house at farrowing time will save many a litter, and prove a most profitable investment of his time and energy.

In the case of heavy, clumsy sows, or those which are very restless at farrowing time, it is a good plan to separate the pigs from the dam by placing them in a warm box or half barrel as they are farrowed. Sows properly handled before farrowing will not usually resent such separation. When the sow has become quiet, and as quickly as possible after far-, rowing is over, the pigs should be, one by one, carefully replaced at a nipple and watched until their safety! is assured. If the sow is very cross, and irritable, it may be necessary to keep the pigs away from her for a longer time, returning them to nurse; every two or three hours. A chilled pig may be revived by immersing it up to the head in water as warm as the hand will bear.

RINGWORM CAUSED BY WEE PARASITE Ailment Is Quite Severe Especially in Young Cattle.

Ringworm in cattle is caused by a tiny vegetable parasite which lives in the skin at the base of the hairs. The hairs become stiff and brittle and break off as the animal rubs to allay the itching incident to the working of the parasites in the skin.

Little patches of bare skin where the hair has fallen out with the bare spot surrounded perhaps with some short stubby hair are the most common symptoms of the start of the ring worm. These bare spots occur mostly about the head and neck and are especially severe in young cattle.

Once ringworm gets a start on an animal it spreads rapidly and is easily contracted by other animals in the herd. Since the parasite has the power of living off the body for some time, halters, stanchions and rubbing posts are common means of spreading it. Any plan of control to be successful must include scraping and scalding of stanchions and walls or the use of strong antiseptic whitewash or spray, and the soaking of halters, brushes and blankets in similar preparations or in scalding water.

Treatment recommended by Dr. K. W. Stouder, Iowa State college, consists in the use of an ointment containing ten parts of lard to one part of sulphur. This is rubbed vigorously over the bare spots of the skin daily for a few days, taking care to apply the treatment to an area of skin considerably larger than the lare spot. Clipping the hair for some distance around the bare spot to permit more direct and better application of the treatment is advisable, particularly if the hair is heavy and long.

___J G. Holland.

SUMMERY DESSERTS

While the strawberries are with us, let us prepare as many dishes as possible to use them.

Steamed Pudding.—Mix and sift two and emehalf cupfuls of flour, three and one-half teaspoonfuls of baking

La Sall

powder, one-fourth teaspoonful of salt and one-half cupful of fine granulated sugar. Work in one-third of a cupful of shortening, add one beatenegg and one cupful of milk; add the dry ingredients and a grating of lemon peel beat until smooth. Turn into a buttered meld, cover and steam two hours. Serve with a bard sauce and sweetened crushed strawberries. Chocolate Custord Pie - Sculd one

cupful of milk with one-half square of grated chocolate, one-half cupful of sugar, one half tablespoonful of butter, in a double boiler. Add the yolks of three eggs slightly beaten. one tablespoonful of cornstarch diluted with two tablespoonfuls of cold milk. Return to the range and cook over hot water ten minutes, stirring constantly. When thick remove from the heat and add one-half teaspoonful of vanilla. Bake a pastry shell on the bottom of a pie plate. Remove and cool, then fill with the chocolate mixture. Make a meringue, using the whites of the three eggs, one-half cupful of powdered sugar and one-fourth teaspoonful of vanilla. Spread over the pie and brown in the oven.

Ginger Ale Salad.—Add one-half cupful of bolling water to a package, of lemon gelatin, stir until well dissolved. Add one and one-third cupfuls of ginger ale; chill until the mixture begins to thicken, then add one-third of a cupful each of diced apples and chopped celery, three slices of pineapple cut into small pieces, one-third of a cupful of chopped almonds and one-fourth cupful of candled ginger chopped. (Chill tn. small molds and serve on tettuce. Preserved kumquatis may take the place of the ginger, making a most attractive looking salad.

Malaria's Victims Many

Of all diseases found in India, troptcal Africa, Central America, southeastern Europe, and other places, malaria is the most deadly. It kills not by the thousand but by the million, and it is still a deadly menace.

Early Westers Railroad The first railroad built in what is now the state of Washington was the Walla Walla & Colorado River railroad which was opened November 1, 1875. It was 12 miles long and extended from Walla Walla. Wash., to Walluta, Wash.

POULTRY • FACTS •

TURKEYS PAY IF GIVEN GOOD CARE

Attempt to Keep Them With Chickens Causes Failure.

Turkey raising is passing from a general farm side line to a commercial enterprise, as more farmers begin to specialize in the business.

"The constal and mountain sections of North Carolina are rapidly becoming centers of an important specialized turkey-growing industry," says C, F. Parrish, extension poultry specialist at the North Carolina State col-"These two sections are taking lege. the lead in production. The growers are finding that where they handle the birds with care, excellent profits may be made. One of the greatest reasons for failure is that some growers attempt to keep the turkeys with chickens and usually do not provide the turkeys with a home, with feed and care."

To begin with, the turkey grower must get started right, says Mr. Parrish. He needs to use only strong, healthy birds as breeders and to place these on clean, well drained. dry soil, where chickens have not been kept. Turkey eggs may be hatched in an incubator, under the turkey hen or under a chicken hen. Where the hen method is used, the mother bird must be dusted with sodium fluoride to control lice. This dusting should be given during the first week and again in ten or fourteen days. Use only a small pinch of the material for each hen or serious results/may follow with the poults.

When the poults hatch, they should not be fed until forty-eight hours old, a little milk and green feed, such as short tender grass, lettuce or onion tops might be given. When feeding hegins, the poults must be fed often, as much as five times a day in small amounts. The scratch grain is given when the poults are about one week old. Feed the mash, scratch feed and greens until the young turkeys are three weeks of age, generally increasing the scratch and getting it finally to two good feeds each day.

Early Roosting Habit Is of Great Benefit

Chicks that get the roosting habit early in life will usually grow into better chickens than those that are allowed to couldle in crowded houses throughout the summer. Early roosting used to be considered the cause of many of the crowded breasthones, in chickens. Results of proper feeding have shown that this trouble is

more often caused from a deficiency of minerals in the ration or from a lack of sunshine.

With this false notion of crooked breastbones out of the argument, practically all of the benefits lie with the early training of the chicks to roost. Such chicks will be easier to handle in the fall when/they are put into laying houses. They will also be less apt to crowd and become overheated, in addition to being easier to care for.

In training chicks to roost, it is a good plan to have the roosts low. Often it is necessary to place the chicks upon the roosts once or twice. Soon they will find that such roosts are much more comfortable than muddling around the hover, and they will quickly adopt the roosting habit.

COCCIDIOSIS ONE CAUSE OF LOSSES

Protect Pullets From Parasites and Various Ills.

(By M. A. SEATON, Extension Poultryman, Kansas State Agricultural College.)

Young pullets will develop into efficlent egg machines if precautions are taken to protect them from parasites and diseases during the summer months and if proper feed is supplied for their development.

Coccidiosis is one of the enemies that must be conquered. It usually appears when the chicks are five to ten weeks old. Symptoms are blood in the droppings, Upon internal examination, the blind intestines are enlarged and filled with a grayish, bloody exudate. Often the liver is spotted. This disease is caused by an organism that tends to destroy the lining of the intestine. It is passed out in the droppings and carried over from year to year in the buildings and ground.

To prevent coccidiosis, move the brooder houses each year and brood on clean ground or use a sanitary platform and keep the chicks confined on the platform until ten weeks old. Keep the young and old stock separated. These precautions will usually prevent the disease.

In outbreaks of coccidiosis, the bestknown treatment is to move the broeder house if possible, clean the house often, and feed large quantities of milk. If an all-mash system of feeding is being used, remove the meatscrap from the mush and substitute 25 per cent dried buttermilk or dried skim milk. Feed this for about two weeks. Large quantities of milk solids in any form will be heneficial.

t Value of Sulphur and

Charcoal for Fowls Support is a medicine, and not a food. True, small quantities of it may be found in all our grains, as well as in some other, articles of feed. But support as found in grain is combined with some other substance which counterbalances it.

There are times when sulphur is

beneficial if judiciously administered, writes Michael K. Boyer in the Farm and Ranch. It must not he recklessly given, and never during wet or damp wenther, as its use at such times is apt to cause rheumatic troubles or a spiffening of the joints.

Sulphur is a blood purifier, and often wards off disease and invigorates a run-down system. In such cases a teaspoonful, once a week, mixed with the mash, for about twenty hens, would be about right, but even so small a quantity as this should be given only during a dry period.

Charcoal consists almost entirely of carbon. It is prepared by heating wood so as to expel all the gaseous matter it contains. Ammonia is a gaseous compound-alkaline like potassa, and is often termed spirits of hartshorn.

When charcoal is properly treated there will not remain sufficient ammonia to be injurious to animal life. Any impurities that charcoal might contain would be absorbed through atmospheric conditions.

Do Not Force Pullets Into Premature Laving

It is usually considered better not to force pullets into premature laying by feeding large quantities of mash. Instead, limit the mash until pullets are quite ready to lay and, by feeding a greater amount of grain, to get them fat. Such a ration emphasizes the fat making material and, by withholding the egg-making materials, removes the danger of a too early maturity. Mash should not be entirely eliminated, as it contains materials needed for building up the muscles of young fowls. Too much of it. however, may precipitate egg laying before it is desirable. Give the developing pullets all the grain they will eat during early fall and after they come into normal laving, gradually decrease grain with a corresponding increase in mash feeding.

Turkey Production

The most important discovery in turkey production has been on the line of sanitation. If the turkeys are kept on ground that has not been used for poultry for a year or more, they will likely escape without any trouble similar to the old blackhead disease. Chickens are known to be carriers of the insect that causes blackhead. If you keep your turkeys away from chicken yards and where turkeys have not been the year before, they will not cause you any trouble.

Gains for Chicks

Chicks make the cheapest and most rapid gains when they are young. It is therefore essential that an ample amount of good wholesome food be kept constantly before the birds. Mash hoppers should be of sufficient size so that a large majority of the chicks can eat at the same time, thereby avoiding the constant fighting for room to eat. The outdoor mash hopper of adequate size is very designible for developing the young stock. All feeding utensils should be kept clean. Build a good house or shelter.

Provide roosts and dropping boards.

Grow some green crop in the yard.

Keep the hens confined to your own land and off the road.

Don't keep a male bird. Hens lay just as well without a male.

Kamala is a good remedy for tape worms in poultry and nicotine sulphate a good remedy for other intestinal worms.

Unless eggs are produced by healthy hens under sanitary conditions, the chicks produced will be liable to the diseases of the present flock.

If you cannot get your cockerels on the market early enough to get the top broiler prices for them, caponize some of them and the what they will bring you next spring as capons.

Bright green alfalfa is a very valuable addition to the mature ducks' ration and they will relish a little of it.

Keep the hens confined to the houses when the yards are muddy; this helps to keep the hens' feet clean. Gather ergs offen.

What is a fresh egg? Strictly speaking, an egg is considered fresh until it has been in storage at a temperature of 300 degrees F. at least 30 days. However, the best prices are paid for the newly laid eggs.

The Community Farm News

C. W. KRATHWOHL, Editor and Publisher.

DON A. BUNNER, Associate Editor.

We Invite Comparison

Last week's issue of the Community Farm News, made mention of 573 people in its news items—The average country newspaper considers that when the number reaches half its circulation number that it is doing full justice to its subscribers. To be sure, the process of gathering this large amount of news is a magnanimous proposition. The greater amount of this credit is due to our wide awake correspondents and our effecient city news gatherer, the rest of the credit goes to the people who have so wonderfully cc-operated with our news agents.

It requires a great amount of work to handle the large volume that we have been handling, and in order to keep the Farm Fews up to this high mark, it is necessary that we have the cc-operation of our merchants and our advertisers. Monday, Tuesday and Wednesday are necessary to take care of the news matter and print the paper hence, all advertising copy and announcements should be in the office, if possible, Friday morning and not later than Saturday noon.

We want to give our readers the best paper that this community ever had, but in order to do so, we must have the co-operation of advertisers as well as our readers. This is your paper—so help make it the best community paper in the state.

Responsibility of Human Service Constantly Kept Before Kiwanis Members

By O. S. CUMMINGS, President Kiwanis International.

No more potent factor in civic leadership and service exists than the Kiwanis dubs existing in 1,760 communities in the United States and Canada. There is a definite responsibility involved in every requirement of membership. The prospective Kiwanian must be interested in his fellowmen, especially those less fortunate than himself. He must be willing to give liberally of himself and of his substance to further the program of service to humanity in which Kiwanis is engaged. He must measure up to that high standard of personal integrity and conduct expressed in the true meaning of the word gentleman.

The basic reason for Kiwanis success is the emphasis which the organization places on the individual, on the human and spiritual rather than the material values of life. In the broad field of service to society Kiwanis has rendered conspicuous and enduring service to citizenship, under-privileged children, the effort to create a better understanding between the farmer and the city man, to raise business and professional standards, and the service of vocational guidance and placement for young men and women.

America's Need Is More of the Spirit of Christ and of Washington

By DOCTOR SHELTON, President National Bible Institute.

America today needs a greatly increased number of men and wom en who, possess the disposition that was in Washington and that was preeminent in Christ-humanity, purity, clear headedness. When Washing ton was derided and attacked he was patient and forebearing. When he wrote to the governors of all the states in 1783, he referred to his retirement as commander-in-chief of the American army, and said that he made it his earnest prayer that God would . . . most graciously be pleased to dispose us all to do justice, to love mercy and to demean ourselves with that charity, humanity and pacific temper of mind which were the characteristics of the divine author of our blessed religion, without a humble imitation of whose example in these things we can never hope to be a happy nation.

Better Than Monetary Assistance Is Aiding Needy to Help Themselves

By REV. C. EVERETT WAGNER, New York.

Those who need help should be taught to help themselves rather than receive momentary assistance by flinging out gifts of money. When sympathy runs wild by performing deeds for those persons who have aroused it, the recipient is harmed more than he is aided. In this way parents are frequently the worst enemies of their children. Individuals hand out money for relief instead of finding a permanent job for the unemployed.

Thousands of people will reach down in their pockets in the distress of thousands that are out of work, but they will not invoke the principle of trying to aid people to assist themselves by agitating for the establishment of state and federal employment bureaus. When they know an aged couple in want they satisfy their own emotions and sleeping consciences by giving temporary assistance instead of helping to create a social order which acknowledges a collective responsibility by passing old age pensions in the various state legislatures.

The last individual which the church can aid is the one who comes to it expecting the institution to do everything for him. That frame of mind is helpless in a constructive method. The first individual which the church should aid is one who really wants a chance to have that opportunity to do so.

Newspaper the Greatest Educator That the World Has Ever Known

The educational value of the newspaper is beyond calculation. It is built into the daily lives of millions of people. It supplies the raw materials of thought and action with clock-like regularity and with a speed of manufacture that is one of the marvels of modern times. It makes the whole world one and helps to raise the standard of living by encouraging people to dress well, to live in better homes, to drive finer automobiles, to eat a more wholesome variety of food, to let their interests go out in a wider range of affairs.

Newspapers have been made possible by universal education, and as the schools improve the press will likewise grow better. Newspapers have made a significant gain during the past year by refusing to play up scandals as extensively as formerly. Press associations and newspaper syndicates are giving more attention to education, health, science, politics and geography. What eyes are to the individual, the newspaper is to society They also teach who follow the reporter's beat, who write against time in editorial offices, who know not sleep, nor distance, nor fear, hor fatigue in their heroic search for news.

TO KNIT or not to knit is not the question, for one does not have to knit these days in order to be apparelled in stunning knitted togs. Women of this day and age take knitted things for granted. Whatever the style trends, Twentieth century gentus does not hesitate to interpret them in knitted stitch.

Just now seekers of the latest are elated over the intriguing scarf and sweater sets which are shown in knitted collections. The sweater may be or may not be with sleeves. The item which "turns the trick" is the triangle or oblong knitted scarf which companions with the sweater, showing relationship by carrying the same patterning and coloring. The three-cornered knitted scarfs tie about the meck-the knot at one shoulder, the point falling low over the other. Tres chiel

North Star's Visibility

The North star is not exactly at the North pole of the heavens and consequently travels around it in a small circle. Theoretically the North star could be seen, under perfect at mospheric condition, from the North pole to a point about 2 degrees south of the equator. pings is repeated both in the blouse and in the wide shawl-like scart which the knit-clad young woman is carrying in her hand.

Very unusual knitted frocks now appearing in the sports realm take on entirely new lines from such as have been associated with the past. In these an effect of sweater and skirt is achieved in one-plece models, s knitted, plaited skirt being attached to the hemline of the sweater. A knitted belt adds a swagger detail. The ensemble note is further accented in that the costume is topped with a shapely crocheted beret which fits the head as modishly as any felt or straw shape.

And there's the sun-tan vogue! What novelty it is carrying into the knitted frock program. Interesting versions include lightweight tweed like sleeveless dresses, the low sun tan cut emphasized in the back of the blouse. If one changes her mind about wanting the rays of the sun to merci lessly tan shealders and arms, a matching sleeved cardigan goes along with the frock, ready to be slipped o with ease.

JULIA BOTTOMLEY. (@, 1929, Western Newspaper Union.)

Safety Precaution

Before the year 1846 the two sides of a ship were called the larboard and starboard sides, but on account of the many accidents that occurred due to the similarity of the two names they were changed in the United States navy to port and starboard.

Horticultural Notes

Bridge grafting is the one way to save girdled trees. . . .

Renew the old strawbery field properly and cultivate frequently until fall.

Use judgment and discretion in the selection of a suitable site for the strawberry plantation. * *

Many growers set their trees closer than 30 feet, but they find when the trees are full grown that they are crowded.

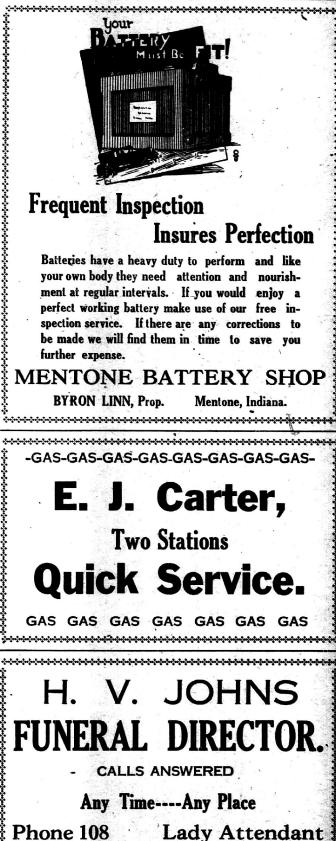

A few dollars worth of good nursery stock, planted in the proper places, will work wonders in beautifying the farm grounds. . . .

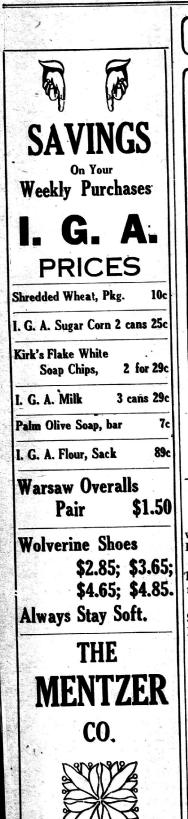

All who store apples, especially scald susceptible ones, would do well to make a trial of the oiled wrappers the coming season. . 18

Know when to spray, _what to use, how to apply the spray to the best advantage, and what insects and diseases it is necessary to control.

In grafting apple trees all cut surfaces must be completely covered with wax to prevent drying out. Two kinds of wax can be used: melted and soft.

Practice clean gardening. Burn or otherwise destroy all cull fruits, or vines, stems, trash and litter about the garden or truck patch. Keep fence rows free from weeds.

HOT WEATHER DISHES

A dessert which is easy to prepare and is most appetizing. Try :

Peach Whip .-Soak two tablespoonfuls of gel atin in cold water and dissolve in one cupful of boiling water. When cool add, one cupful of.

peach juice, the same of orange juice, and the juice of half a lemon When slightly thickened and cold whip with an egg beater and fold in one cupful of peach pulp and one cupful of heavy cream whipped, with a few drops of, bitter almond flavoring. Chill until firm.

Island Salad .- To one cupful of crushed pineapple add the juice of half a lemon and one-fourth cupful of sugar, heat for five minutes. Soak one tablespoonful of gelatin in onefourth cupful of water and add to the hot mixture. Cool and when it begins to set add one cupful of grated mild cheese and one-half cupful of whipped cream. Serve with mayonnaise thinned with a little pineapple juice, add half a pimento and one-fourth cupful of cetery well chopped. Serve on lettuce with ripe olives as a garnish.

Amber Marmalade. - Take .one orange, one grapefruit and one lemon Remove seeds and cores. Slice yery thinly. Cut the peel into thir strips with seissors. Measure fruit and juice and add three times the quantity of water. Let stand over night, cook ten minutes and let stand again over night. Then add equal measure of sugar; cook until the mixture jellies.

Add a spoonful of apple sauce to the cooked salad dressing when using it for any salad. It adds to the flavor.

A cheese filling, which is especially good, is this: Mix chopped nuts and raisins with cream cheese which has been moistened with a good french dressing. Soften two cakes of cheese with cream, season with salt and paprika and frost the sandwich loaf with the cheese. Garnish the loaf with some of the ingredients of the filling. Place on a platter in a nest of lettuce. Serve cut into nice slices.

This Ordinance shall be in full force and effect from and after its passage. Passed by the Board of Trustees July 3rd 1929. WELDON REED

Attest: FRANK LYONS E. A. BLUE, W. W. WHETSTONE. Town Clerk. Trustees.

Green Feed for Fowls

Rye makes good green feed for either chicks or hens. Oats is good, but is more easily destroyed than rye. Essex rape lasts longer than either, providing it is allowed to grow to the beight of four to six inches before the chicks are turned in. Alfalfa and red. white or sweet clover make excellent range for both chicks and laying hens. Choose whichever is best suited to the soil in the poultry yard, but for hens' sake choose one of them.

Raise More Turkeys

A sufficient number of turkeys were raised last year by poultry men to convince others that turkeys are prof itable. Because of having reached this conclusion a large number of farmers and poultry men will no doubt be added to the ranks of turkey breeders during the coming year. For the farm ers who buy a few turkey bens for breeding purposes there are a num her of pointers which should be kept in mind.

Notice Egg Shippers

We recently received an another advertising account from New York. This makes three that we have, Stern and Brauner, Louis Kadans Co. Inc. and Vineland Farmers Corp. As you are probably aware, advertising pays for your local paper and since you have signified your want of having a local paper you can show your appreciation to the merchants generally and the three forementioned firms by giving them your patronage. The next time you ship eggs why not give our supporters a trial. In our business dealings with them they have treated us very squarely and we feel confident that you will receive the same treatment. Show your appreciation and be a booster for the Community Farm News

For Sale

An oak rocking chair, a Brunswick Sewing machine, and an extra large library table. Inquire of Mrs. W. H. Cooper, 12 on 7 Talma.

Family Reunions

The Harsh-Teeter reunion will be held at the Community building, Mentone, Sunday, July 28th.

The Laird-Braddock reunion will be held at the home of Mr. and Mrs. Orton Long, 5 miles west and ½ mile north of Mentone, on Thursday, August 8th.

The Eaglebarger reunion will be held at Beechwood Park, Huffman Lake, on Sunday, August 11th.

Supreme Test

The figure of speech "acid test" refers to the application of acid to test the purity of gold.

Daily Thought

When our friends have deceived us we owe them but indifference; to the tokens of their misfortunes we always owe them pity.—Rochefoucauld.

Soaked Mittens Warmest

A strange custom of New England coast winter fishermen is to soak their thick, woolen mittens in the see and wring them out as dry as possible before putting them on. They say their hands keep much warmer than if they don the mittens when dry.

Ours Is a Cash Business

We wish it understood that we are conducting a strictly cash business both as to the Farm News and our job printing establishment. We have no books in day with friends and relatives in which to keep charge accounts and have no intention of buying

any. A few people who wished to take advantage of our special subscription price telephoned in at the last minute to have their names placed on the list, stating that they would call in a day or two and settle. Some of them have failed to keep their word, and if they do not pay before the 13th their names will be taken off the list.

Intoxicated Driver

Heman Leiter of Palestine was arrested Monday by Sheriff Mc-Krill on a warrant from the Warsaw city court charging him with driving an automobile intoxicated on the 4th of July. He entered a plea of not guilty before the court and his trial was set for the 15th, with bond fixed at \$400.00.

Delayed Delivery of Papers

We have had considerable complaint about the late delivery of our paper on Tippecanoe route 1, and Rochester route 5 last week. It seems that the bundles for these two routes never reached their destination until Monday. This was no fault of ours as the papers were placed in the Mentone postoffice at 2, p. m. Wednesday and should have reached our subscribers by Friday. If this delay should happen again and our subscribers will notify us we will take the matter up with our postmaster and see if it can be remedied We want all our subscribers to get the Farm News promptly.

Mexican National Sport

The builfight season in Mexico begins at the end of November and lasts until Easter Sunday. Fights are held all over Mexico, but Mexico City is where the principal fights are held.

Moon Like Volcanic Ashes

No one knows for sure of what the moon is made, but temperature tests during the last eclipse indicate that it is composed of a porous substance possibly not unlike the volcanic ashes common in various parts of our earth, says Popular Mechanics Magazine. Scientists are quite certain that the moon is not like solid rock in struc-Drs. Edison Petit and S. B. ture. Nicholson, of the Mount Wilson observatory, made careful measurements of the cooling of the moon as it went into the earth's shadow.

John Wagoner of near Talma submitted to an operation at the Woodlawn hospital Saturday, at this writing Mr. Wagoner is rapidly improving.

Melburn McGowen and family spent the afternoon and evening at Huffman Lake the fourth of July and enjoyed the play that place.

Mr. and Mrs. Herschel Lehman Lloyd Kesler and two children of Warsaw, Misses Olga Clark and Edna Haimbaugh and Messers Rex Haimbaugh and Merril Casey enjoyed a Picnic at Lake Wawasee last Sunday. The picnic was in honor of Miss Dorese Haimbaugh who is visiting at the Haim baugh home.

The Rochester Ladies Auxiliary are having a picnic on Thursday July 11, at the tourist camp at Rochester, they are inviting as their guests all of the auxiliary members of Fulton county. All the lady members of Newcastle Township are expected to be there with a well filled basket. Each part of the program.

Rev. Hunsinger, minister of the Christian Church spent Saturday night and Sunday with John King and family.

Mr. and Mrs. Wm. Brown and Mr. and Mrs. Jacob Gross were Sunday afternoon visitors at the Joseph Gross home.

Donidell Bryant of South Bend is making her home this summer with her aunt and uncle Mr. and Mrs. Verdie Brockey.

Ivan Fenstermaker and wife and Mr. and Mrs. Preston Johnson and family of Niles Michigan were fourth of July guests of Mr. and Mrs. Ora Horn.

Best Form of Exercise

In exercising hear in mind that the vital organs lie in the chest and ab dominal cavity. It is all right to move arm and leg muscles, but such exercise is of little value compared to movements which quicken the breathing and heart action.

head and hospitality Joseph Joubert.

Be Ready for Opportunity

Prepare yourself to take advantage of the chance for success tha is certain to come your way some day. Too man, men who keep grasping at opportunity wouldn't know what to do with it if they should happen to eatch it.-Grit.

Chance for the Church

The great discovery of the Nineteenth century, that we are of one blood with the lower animals, has created new ethical obligations which have not yet penetrated the public conscience. The clerical profession has been lamentably remiss in preaching this obvious duty.-Dean Inge in Our Dumb Animals Magazine.

Test for Poisonous Gas

The easiest method for use by an unskilled observer in testing air for carbon monoxide gas is to subject a canary or white mouse in a cage to the atmosphere to be tested Both of these animals invariably become unconscious before the concentration of this gas is sufficient seriously to affect a normal person.

Avoid Changes in Feed for the Pullet Flock

It is surprising how important some poultrykeepers are when endeavoring to secure eggs from the pullet flocks. Unless the yield goes up by leaps and bounds, they imagine that there must be something wrong with the feeding, and forthwith begin to change the rations.

This happens at irregular intervals, and in consequence the birds never have an opportunity of getting accustomed to any particular ration. There is nothing more detrimental to egg production than these frequent changes. Of course, it would be unwise to persist in feeding a ration which had proved to be unsuitable, but until such unsuitability has been definitely established changes should be avoided.

Duck and Goose Eggs Require Much Moisture

It depends pretty much on the operator whether duck and goose eggs hatch as well in an incubator as under hens. They require more moisture than hens' eggs and usually need to he "fairly drowned" the last two weeks. It would not be practical to try to hatch hens' eggs with goose eggs in the ordinary small incubator, owing to the difference in size which would give a slightly different degree of heat on the small and large eggs.

Spade up the yard frequently.

Fowls stand cold better than dampness.

Provide a nest for each four or five

Make the house dry and free from drafts, but allow for ventilation.

Get the hens out in the sunshine and feed plenty of oyster shell to get good strong eggshells.

Market eggs at least twice a week in summer.

Build the self-feeder so that it protects feed from rain.

Select the best growing and most vigorous cockerels for breeders.

Old hens are the most common spreaders of poultry tuberculosis.

Send your big fluffy boarder hens to market. This is one way to relieve your farm of loss.

A flock of 50 ducks can be kept on many farms without materially increasing the labor needed in caring for the poultry.

Ducks do not require a large investment for houses or equipment. A tight shelter that will protect them from the weather is satisfactory.

Baptist Church Notes

The pastor will be on his vacation during the next two Sundays July 14th and 21st. There will be no preaching services on these Sundays, but Sunday School will be held, at the usual hour as well as the prayer services on Thursday evening. Members of the church will have an opportunity to give their regular church offering at the close of the Sunday School hour. V. E. Squibb, Pastor

Idols Must "Make Good"

A tribe which has been found in Morocco binds its idols with ropes and leaves the fetters on until a pray erful request is granted or the dis pleasure of the disappointed suppli cant abates.

Facts for Egg Producers WHO WANT "More Money for Eggs"

Although there are more hens on farms, yet there will not be an over-supply of high quality eggs.

More money can be had only by producing high quality eggs. We have the buyers and we pay for quality.

UALITY Eggs

Are those which are of good size, clean, sound, strictly fresh and white yolks, ordinarily not more than two or three days old.

If you need further advice in producing quality Eggs get in touch with Mr. C. L. Manwaring, or with your State Agricultural College and the U. S. Department of Agriculture, at Washington, who are interested in this problem.

Prices of ordinary eggs are low, but prices on high grade quality will continue to advance.

Louis Kadans Co., Inc., 306 Greenwich St., New York.

Spoken From the Heart Out PROBABLY most of the readers are familiar with the story of the negro who worked as an extra at one of the Hollywood studios and who, in the filming of a scene purporting to show an African jungle, was called upon to enter a camoultaged cage containing a performing iton. The prospect did not appeal to the candidate. He demurred at it.

"What's the matter with you?" said the assistant director. "That Hou's not going to hurt you. That lion was brought up on milk."

"So wuz I brung up on milk," said the unhappy darky, "but I eats meat once in awhile now."

Of somewhat more recent vintage is a tale that I heard only the other day. The man who told it to me said it really happened.

At one of the big plants they were making a movie dealing with scrip tural times. One scene showed the court of a savage potentate. For the role of the monarch a huge coal black Afro-American was selected. He made his entrance, scantily garbed in barbaric trapping. For added realism it was decreed that over his shoul ders should be draped a live leopard Just before the animal was brought out of his cage her trainer gave her a shot of morphine to keep her docile and quiet. She was a lady-leopard.

A small negro, newly arrived in California from Texas, was detailed to accompany the giant on his tri umphant entry and to fan him with a huge östrich plume fan. The costume of this supernumerary consisted of a breech-clout and an ankle bracelet. He took himself and his role very seriously, which, of course, was ex actly what the director desired. In advance he was warned that no mat ter what happened, he must continue to fan the savage king until ordered to leave off. A slip on his part might ruin the whole film.

Midway of the scene the leopard suddenly woke up Presumably, the dope was dying out in the spotted beast. She emitted a snarl and began to wiggle off her perch upon the big black man's shoulders. With one hand he grabbed her by the neck and held the spitting, squealing cruature at arm's length.

There was an instantaneous scat teration. The director, the ramora men and the supporting members of the cast beat it for places of safety Only the little darky held his ground Mindful of his instructions he con tinued the faming operation; but the fan trembled and quivered in his grip and his rolling eves were focussed on the struggling leopard and out of the corner of his nouth, with all the ferver of which he was capable, he entreated the big negro over and over again an these words:

"Don't cast her aside! Tha's all l asts you-don't cast her aside!" (@ by the McNaught Syndicate. Inc.)

FAVORED SMALL FRUIT VARIETIES

Blackberries, Dewberries and Raspberries Named.

The Georgia experiment station, after testing out over a period of 4 to 24 years of blackberries and nine varieties of dewberries, is now in a position to make de nite recommendations to growers wheare interested in growing these fruits.

According to J. G. Woodroof and J. E. Bailey of the experiment station, the Young variety of dewberries has proved to be outstanding. It is among the first to ripen and is decidedly the heaviest bearer. The plants are very vigorous and disease resistant. The berry is often more than an inch long, highly flavored and juicy. An average of 106 quarts was produced by 10 plants.

The best yielding blackberries, according to the station results, are French Lawton, Eldorado, Mersereau and Crandall, in the order named. Any one of these varities will be maturing as the dewberries cease producing and will continue to provide berries until the Himalaya blackberry comes into bearing to prolong the blackberry season until August. Then the Evergreen dewberry can continge to proyide fresh berries until early fall.

Raspherries have also been tested out by the station. The order in which the leaders stand for yield is Van Pleet, June, St. Regis and Golden Queen. The order in which they are matured is June, St. Regis, Golden Queen and Van Fleet. All these varieties are red, except Golden Queen, which is yellow.

Blackberries, dewberries and raspberries should be set to the field in late fall, soon after the plants are made dormant by frost. The rows should be spaced from six to eight feet apart so as to provide adequate room for cultivating the plants and harvesting the fruit. The plants and harvesting the fruit. The plants may be spaced from four to six feet apart in the row, depending on the vigor of the plants, and trained to any convenient type of trelfis or stakes.

The station is planning to issue a bulletin that will give detailed information about the tests with blackberries, dewberries, raspberries, blueberries, currants and gooseberries, with recommendations as to cultural methods.

Shropshire Most Widely

Grown Variety of Plums To most folks the word "Damson" means a small, late, blue plum with furt flavor used for making jam and proceeves, and since Shropshire is the variety of Damson plum that is almost universally planted for this purpose it is Shropshire that characterizes the Damson pluus. Yet there are many plums of this type—some black, some blue, and some yellow, others large, small, clingstone, until there are literally dozens of varieties considered as belonging to the group.

Shropshire is perhaps the most dependable variety, and certainly the most widely grown. Though the fruit is not large, nor overly high in quality, the tree is large, vigorous, hardy, and productive, and adapted to a wide region, thus making up in tree characters for what it lacks in fruit characters. French is the opposite of Shropshire in this respect, being inferior in tree characters but larger and better quality in fruit. Both varieties are late in season and very old in point of origin, Shropshire being some three hundred years of age. King is another late kind of larger size than either of the two discussed.

Apple Trees Are Cut by Millions Survey Shows Concentration in Favorable Sections of Country

(Prepared by the United States Department of Agriculture)

In twelve of the last fifteen years the average farm price of apples has been below the general prewar wholesale price level of all commodities. As the result, millions of apple trees have been removed and others have been neglected. From 1910 to 1925 the number of apple trees in the Unifed States decreased nearly 40 per cent. Notwithstanding the decline in the number of apple trees, production of apples has been practically maintained. These are some of the important facts noted by the United States Department of Agriculture in an analysis of the prospects of the apple industry. Recent changes and present tendencies, the department indicates, promise a better approach to stability in the industry, but with the number of trees now planted, commercial production is expected to continue at a high level for several years.

Production Increased.

Though total apple production has declined slightly since 1917, commercial production has steadily increased. Moreover, carlot shipments have increased at an average of 4,600 carloads a year since 1918, and movements by motor truck have grown considerably. Increased production per tree has largely offset the decline in the num ber of trees. The department expects further increases in commercial apple production during the next few years. accompanied of course by an increase in the domestic demand resulting from population growth. The rate of increase, according to the department, will be less than it was during the last ten years. The future appears somewhat brighter for the real commercial grower who is favorably located and who produces apples of high,

quality at low cost. Conditions in the industry are changing so rapidly, however, that success for the individual grower requires attention to conditions throughout the country, as well as to the technical problems of his own orchard. Apple production is a business in which long views are necessary. The orchard planted today will not return a revenue for seven or ten years. When it starts producing. however, it may be a source of incon for 30, 50 or 60 years. In the past this fact seems not to have been sufficiently borne in mind, and overnlanting has resulted.

In a survey, started by the department, information has been obtained on the number of trees of different varieties and ages in the country as a whole and in different apple producing sections. Some of the outstanding facts revealed are announced by M. R. Cooper, senior economist in the bureau of agricultural economics.

Future of Industry.

So that the future of the apple industry may be regionally considered, Mr. Cooper grouped 22 important apple states in six divisions, largely according to location, but partly according to the number of varieties grown. These 22 states have about 74 per cent of all the apple trees of bearing age in the country. They produce about 81 per cent of the annual apple output. In the western group of apple states (the Pacific coast and mountain states) apple production has increased enormously in the last fifteen years. These states from 1909 to 1913 produced annually about 19,000,000 bushels. Their average annual production in the years 1924 to 1928 was more than 54,000.-000 bushels. In recent years apple production in the western states has been fairly well stabilized, though many of the trees there have not reached their full bearing capacity. It seems certain that heavy increases in pro-duction in this region will not recur in the immediate future.

Like Lindy he will make the trip alone, and he has no doubt that he will reach the other side,

Feeding Grain to Cows on Pasture Is Favored

A cow eating 75 to 100 pounds of average June grass per day is eating the equivalent of 15 to 20 pounds of mixed hay. Do we feed our good cowe only hay in winter? No; then why do we expect our good cows to keep up in flesh and in milk flow all summer on grass alone? In winter we feed liberal amounts of grain and silage with hay. That is why cows on pasture should get something to eat in addition to grass. Good grass will help to increase the milk flow but it may take off some body flesh because there is no fattening tendency in lush grass.

A cow weighing 1,200 pounds on June 1, after being fed libérally on grain all winter was turned out to ent only average grass. On July 15 this same cow weighed 1,050 pounds. This loss in weight of 150 pounds was not due entirely to the heat and the files. The loss was probably due to the lack of proper nourishment.

Grain feeding in summer is the secret of summer profits and continued production at the lowest cost.

Grain feeding the year around means the greatest annual profits. It helps to build up the cow in summer and fail and assures greater profits during the winter months.

The principal thing in feeding the bull seems to be to not feed large amounts of fattening grain, which will induce him to become overly fat nor to feed excessive amounts of silage which will cause him to become heavy in the middle and generally a slow "breeder.

Prompt Returns

Satisfactory Prices and

RIGHT FOR EGGS

Careful Feeding Will Encourage Hens to Lay More.

Poultry keepers who fed a wet mash in addition to the regular grain and dry mash kept their hens laying heavily last year, says L. M. Hurd of the New York state college of agriculture. Hens should be kept in production through careful feeding during the summer and early fall so that they will molt rapidly and soon return to producing.

Records of the Missouri College of Agriculture show that early molting hens lay fewer eggs during the following winter than those hens which molt late.

In the summer and fall, hens should have an abundance of tender, leafy green food, shade, and fresh clean water at all times. Hens that do not respond to good treatment should be removed so as to give the others a better chance. Skim milk or semisolid buttermilk, at the rate of one or two pounds to a hundred birds should be used. A good plan for feeding this, is to mix it and enough water with the regular dry mash. This mash should be fed in the afternoon, just before the night feeding of grain. The hens should have only what they can eat up in twenty minutes.

If milk is not available, fill a pall half-full of dry oats, fill it up with water, and let it stand from one afternoon until the next. Then add enough of the regular dry mash to take up the remaining moisture, and feed as described above.

After September 1, poultrymen have had good results from using lights to prolong the laying season. Late in the fall this should be discontinued to give the hens an opportunity to molt before cold weather, and rest for the breeding season.

Barred Plymouth Rock Favored to Caponize

One of the best breeds of poultry for caponizing is the Barred Rock as the sex can be determined at an early age. The cockerels will be light and the pullets dark and when the chicks are about six weeks old and weigh close to one and a half pounds each, the poultryman can go into his colony houses with a spotlight and collect cockerels **a** fast as he can fick them up.

In caponizing such breeds as Rhode Island Reds or White Wyandottes, it is more difficult to pick out the male birds at an early age, says a writer in the Michigan Farmer. Considerable accuracy is possible by studying the heads. The male birds soon appear more coarse and have a harsher voice than the pullets. Pullets of any color soon develop what might be called the feminine type of head. It is smaller and more refined than the head of the male bird. The heads, beaks, and even the undeveloped combs on male chicks have a different appearance from pullets.

Some breeders caponize White Leghorn cockerels and make them weigh as much as six pounds but in general the caponizing is confined to the heavier meat breeds like the Barred Plymouth Rock, Jersey Black Giant or Light Brahma.

Various Good Points of the African Goose

The African goose has had at different times several names, among which were China goose, swan goose, Chinese swan, Guinea goose, Spanish goose and others. Its origin is unknown, but it is quite probable that it originated in a cross between the goose we now call the China goose and the Toulouse, and from this cross was perfected until it is now an enlarged kind of a Brown China goose. The African goose lays better than any of the other larger breeds and it. grows to be as large as any other. Specimens that were given the hest care have grown to weigh 25 pounds, but the standard weight for a fullgrown African goose is 20 pounds. They are very hardy and easy to raise. They are very watchful and know strangers from those whom they see every day. When a stranger comes among them they set up a clamor that notifies every one within hearing that something out of the ordinary has happened.

Plenty Good Features

Poultry houses that are built today are sensible; though they have plenty of fresh air, they have no draughts, though they contain more hens to the square foot, there is no dampness which is so fatal.

Two essentials that can be had for the taking are provided—sunlight and fresh air—and with these there is no reason why we should not have the healthiest race of fowl found on the face of the globe, and as a result an increased production of eggs.

Ventilation Essential

Ventilation is another essential of modern poultry housing. A good ventilation system supplies fresh air in the poultry house without making it subject to sudden temperature changes. Ventilation removes dampness and eliminates foul coors, making the flock healthier and more comfortable. Automatic ventilation systems are now on the market which consist of intake flues in the back of the house and a cupola on the roof to carry out foul air.

First European in Alaska?

In 1711, a Cossack, named Popot, visited Alaska This is the first visit of a European which is recorded.

ARE MOST VITAL

Pigs Cannot Escape Parasites in Foul Pens.

Probably there is no more common or more serious parasite of domestic animals than the common romadworm of swine. These worms, says R. F. Bourne of the veterinary divisi m, Colorado Agricultural college, ordinarily 'occur in the small intestines but are frequently found invading the adjacent organs, particularly the bile ducts of the liver.

It is practically impossible to raise plgs fr.e from worms in quarters which have been used for hog raising for years because the soil is polluted with millions of eggs passed by animals of previous years, each egg coutaining a live emb yo ready to laum h its attack when ingested by the yor ag pig. Because of this fact it is im ortant that all farrowing pens be c'her located on clean ground or that they be thoroughly scrubbed with balling wter and hye. Ordinary antisepties do no good in so far as destroying worm harvae is concerned.

Pigs born into a clean environment and kept free from contact with old infected pens escape the various harards accompanying worm infestation. It is desirable to move them from these clean pens into open fields or pastures wherever this is possible and to keep them away from infected quarters until they are at least four or five months of age. A good deal can be accomplished by ordinary s: aitary measures in rencoring the filth which accumulates in hog pens and in the use of santiary wallows.

Removal of worms from adult pigs is best done by a qualified veicerinarian since no simple treatment seems to be very effective.

Money in Raising Pigs by Saving Little Ones

The sure way to make money raising pigs is to save them. Every little pig that is lost increases the cost of those saved. Very commonly one-third to one-half the pigs farrowed die before weaning time. A pig at farrowing time is worth or hus cost approximately \$3, and it pays well to keep as many of them alive as possible. Aim to be on hand when the sow farrows to see that everything goes well and that the little pigs get their first meal as soon as possible. Then, be sure they have a place to keep warm, Have a guard rall around the pen or a pratecied corner with most of the hedding in this protected place.

Shrinkage in Weight

of Shipping Steers When steers are shipped to market there is always some shrinkage or loss in weight. By proper handling it is possible to reduce this loss. Steers which have been getting a full feed of corn and alfalfa hay should have their grain somewhat reduced a day or two before shipping and given mostly prairie hay or fodder in place of alfalfa. Steers which have been getting a good deal of silage should be fed dry fodder before ship ment to market. Arrange to ship so that the cattle will arrive at the stock yards during the night or early in the morning so they can take on a fill before the buyers bid on them.

Live Stock Hints

Most men will do fairly well to keep an ordinary supply of live stock in good condition and, paying its way,

This year there is a nation-wide movement among sheep raisers to put on a docking and castrating campaign.

As in the case of all other like stock, care and attention are the main essentials in producing good hogs for early market.

A good hog oller kept filled with old crank-case oil, diluted with coal off, and a liftle coal tar dip added, will hold the lice in check and keep down mange or scurf.

Since prevention is always the cheapest remedy, all sheep should be carefully dipped twice each spring soon after shearing. The cost is small, the benefit considerable.

At the earliest possible age the colt should be fed oatmeal and bran, oilmeal, corn and legume hay. He may be weaned at four to six months of age, depending on his condition.

Sheep will overeat of sait if it is supplied only at intervals. Keep it before them at all times.

Good beef caives that get a little grain in a creep along with their mothers' milk are being sold fat at weaning time at \$60 to \$80 per head.

Cheap pork comes with an abundance of clean water of the right temperature. Have fountables that prevent the hogs from making v muchole about it. A healthy hog needs water close to bis feed.

of Spanish Origin

The name "Savannah" is derived from the Spanish word "savanne." meaning "grassy plain."

MUST DEFEND NATION'S IDEALS

By COL. R. K. SPILLER, Roanoke, Va.

Preparedness is the one sure way of preventing war and preserving our cherished American ideals. The present wave of pacifism is undermining American preparedness and leaves the United States in a defenseless state compared to that preceding the World war. Pacifism eventually will break down the national morale of America. Preparedness begins in the home, and when our family morale is shattered, the nation is helpless.

I see little ground for belief that there will be no more wars. The ideals of the United States have been preserved for a longer period than those of any other nation and we must be prepared to defend them at all times.

MAKE NATIONS SUBJECT TO LAW

By EX-GOVERNOR LOWDEN, Illinois.

Civilization must keep pace in its moral and mental progress with its material advance. We have got to insist that nations obey the same moral obligations we lay upon men.

There used to be a theory that the rules of conduct which govern men generally do not apply in certain relations of life. A conspicuous example is that of the politician. He is too often excused for his conduct by saying, "Oh, that's politics."

That excuse for the politician or the nation is a thing the past has buried. Nations in their relations must observe the ordinary moral concepts. That is a condition of the complete success of all conferences for disarmament, of all conferences for improved international relations. There is no difference between a nation and an individual as to his moral obligations. The nation is morally an aggregate of all its citizens.

If there was one thing that was made clear throughout the war, it was that the moment a nation adopts the philosophy that it can do no wrong, just that moment some subtle influence begins to corrupt and destroy the character of its own citizens.

NEXT WAR TO BE FOUGHT IN AIR

By E. L. JAHNCKE, Assistant Secretary of the Navy.

F AMERICA ever enters another war, it will be won or lost in the air. The recent maneuvers at the Panama Canal Zone told the story. There the theoretical enemy was known to be planning an air attack and the defense knew the day it would be launched. The defense had as many or more airplanes as the enemy had for attack. Yet the enemy was able to bring his airplane carrier within 150 miles of the Pacific side

DON A. BUNNER, Associate Editor.

of the Panama canal and launch his bombers and combat planes into the air before daybreak.

The enemy air fleet was over the Panama canal by the time defenders knew it was coming. The enemy dropped their bombs successfully upon the Pedro Miguel and the Miraflores locks and returned to their carrier out at sea before any kind of defense could become effective. Theoretically the Panama canal is now an impassable wreck.

Take this as an accepted fact in the world's naval circles. When you can get an air craft carrier even 250 miles off your enemy's coast, the majority of your airplanes will reach their objective and drop their bombs with deadly effect. The only answer to an attack like that is an equal or superior force of your own aircraft carriers, protected by both their own armament and an escort of fast cruisers and destroyers, able to put out to sea at top speed and attack the enemy before his air fleet can be launched. A navy limited to the surface of the sea might as well be scrapped.

These are the problems which the navy is studying. The way the navy meets them will mean the difference between victory and defeat.

Shorter Working Hours Have Raised the Standard tof American Workers

By ETHELBERT STEWART, Federal Labor Official.

ORE industrial workers in the United States are enjoying an increased amount of leisure than in any industrial country in the world. The dismal prognostications made some years ago when first shorter work weeks were introduced have not

been justified. The labor unions have agitated for shorter hours for many years and have succeeded in bringing about that reform. Now the five-day week is coming into general use. Forty or fifty years agd it was the universal opinion of employers that the longer the hours the better it was for the man. Vacations were practically unknown in industry. Both employers and the wives and children of workers in many cases dreaded Sundays because so many of the men got drunk. When the unions came along with their demands for shorter hours these arguments were advanced and were renewed when, more recently, the five-

day week was proposed. These arguments do not hold good any longer. The type of man working in the industries has progressed with the progress of industry. He has been compelled to keep up with the times or drop out of the procession entirely. Some workers still drink on their days off, but that is the fault of the man and not the system. If they drink habitually, they will find their jobs gone and, to that extent, the situation is selfcorrective.

Famous Clockmaker

Seth Thomas was a famous clockmaker of Connecticut. He was born in 1786 and was the pupil and successor of Ell Ferry, a noted maker of clocks. He built a factory at Thomaston, Conn., which was carried on by his son of the same name. The elder Seth Thomas died in 1859.

Root of Quarrelsomeness

Good nature, like charity, begins at home. We are never more ready to quarrel with our neighbors than when we are dissatisfied with ourselves. When we look with disapproval on our own doings, it is difficult to be enthusiastic over the course that others are following.

A PAID ADVERTISEMENT

"JONES LAW" and provisions of the National Acts as to "Intoxicating Liquor," "Person" and Advertising.

The bill as it was passed by the Senate reads as follows in full text;

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled:

"That wherever a penalty or penalties are prescribed in a criminal prosecution by the National Prohibition Act. as amended and supplemented, for the illegal manufacture, sale, transportation, importation, or exportation, of intoxicating liquor, as defined by section 1, Title II, of the National Prohibition Act, the penalty imposed for each such offense shall be a fine not to exceed \$10,000, or imprisonment not to exceed five years, or both; provided that it is the intent of Congress that the court, in passing sentence hereunder should discriminate between casual and slight violation and habitual sales of intoxicating liquors or attempts to commercialize violation of the law.

"Section 2. This Act shall not repeal nor eliminate any minimum penalty for the first and any subsequent offense now provided by the said National Prohibition Act."

Section I, Title II, National Prohibition Act

The word "liquor" or the phrase "intoxicating liquor" shall be construed to include alcohol, brandy, whisky, rum, gin, beer, ale, porter, and wine, and in addition thereto any spirituous, vinous, MALT, or fermented liquor, liquids, and compounds, whether medicated, proprietary, patented, or not, and by whatever name called, containing one-half of 1 per centum or more alcohol by volume which are fit for use for beverage purposes.

National Prohibition Act

Sec. 3. No person shall on or after the date when the eighteenth amendment to the Constitution of the United States goes into effect, manufacture, sell, barter, transport, import, export, deliver, furnish or possess any intoxicating liquor except as authorized by this Act, and all the provisions of this Act, shall be liberally construed to the end that the use of intoxicating liquor as a beverage may be prevented.

Sec. 18. It shall be unlawful to advertise, manufacture, sell or possess for sale any utensil, contrivance, machine, preparation, compound. tablet, substance, formula direction, or recipe advertised, designed, or intended for use in the unlawful manufact ure of intoxicating liquor.

The National Act is in force in every state and dependency.

Indiana's Provisions

Sec. 4. It shall be unlawful for any person to PURCHASE, receive, manufacture, transport, ship, possess, sell, barter, exchange, give away, furnish, or otherwise handle or dispose of any intoxicating liquor, except as authorised by this act.

Sec. 29. It shall be unlawful for any person either directly or indirectly to advertise or display any intoxicating liquor or any formula, ingredient or apparatus for the illegal manufacture, disposal, or transporation of intoxicating liquor, or any article or vessel for containing such liquors, in any newspaper, periodical, circular, handbill, or price list,or on any sign, signboard, bilboard, balletinboard, or in any show window, or in any manner what ever; or for any person to publish or distribute any such advertising or display matter in this state, which either directly or indirectly advertises or displays for sale or gift any intoxicating liquor or apparatus, formula or ingredient for the manufacture, sale or transportation of intoxicating liquor.

Mr. and Mrs. Benjamin Blue and Mr. and Mrs. Alpheus Guy called at the Austin Blue and in this part of the country which Russel Norris homes Wednesday he expects to open about the first afterr.oon.

Let's Lessen The Risk

Because transients are using our main street for a speedway, the Farm News think something should be done to slow them up. Although there have been no accidents lately there have been several near mishaps. The possibility of future accidents would be lessened considerably by reducing the speed. It seems to us that this could be done very economically by making the public square, Main and Broadway, a four way stop street. This would not delay tourists or local drivers but a seconds, and it would serve as a check in speed, necessitated by stopping and starting.

Since the risk is so unnecessary and since Mentone is made up of such prosperous people, we can think of no logical reason why such a condition should be allowed the death symbol of skull and cross bones is lurking in our very midst just waiting for a chance to express itself. Are we going to cheat it out of its big moment?

There would be no insurance of Kathryn and Ruth Bell of Fort any kind if it were not that some we know that many people in town are holders of various insurance policies, it seems that they must surely believe in insuring themselves against the risk of life and property. Then why don't we insure ourselves from this evil of future accidents especially since the protection is so low in cost. It would only take a can of paint and four signs to remedy the situation How many automobile accidents would that pay for? Lets act at once and lessen the risk.

Mentone To Have Pool Room

J. S. Kirkendall is repairing his building on Main street this week. This is a building that houses Sarber's grocery and will house a pool room of M. H. Mollenhour. putting in running water and refinishing the inside. Mr. Mollenhour plans to have one of the best and most modern pool rooms of August.

Facts for Egg Producers WHO WANT 'More Money for Eggs"

Although there are more hens on farms, yet there will not be an over-supply of high quality eggs.

More money can be had only by producing high quality eggs. We have the buyers and we pay for quality.

Are those which are of good size, clean, sound, strictly fresh and white yolks, ordinarily not more than two or three days old.

If you need further advice in producing quality Eggs get in touch with Mr. C. L. Manwaring, or with your State Agricultural College and the U.S. Department of Agriculture, at Washington, who are interested in this problem.

Prices of ordinary eggs are low, but prices on high grade quality will continue to advance.

Louis Kadans Co., Inc., 306 Greenwich St., New York.

MADE STATIONARY

High-Power Pump Pushes Liquid Through Pipes.

One of the present-day tendencies in spray equipment is the introduction of stationary spraying plants. From a central point at the source of water supply, pipes are run to all parts of the orchard. Hose may be connected to outlets spaced at intervals through the whole piped area. A high-power pumping outfit pushes the spray material through the pipes. It is necessary to have this high pressure at the plant because the friction of the small pipes rapidly reduces the pressure if the distance to the outlet is great.

The original investment in this type of spraying equipment is high. To be economical, it is essential that the orchard area be compact. If it is not compact, the piping cost becomes prohibitive.

A few growers in the Middle West are now putting in this type of spray equipment. They are very common in the far West, where the acreages are compact and usually not more than 40 acres in one unit.

There are several objections to this type of equipment in some sections. In Illinois many fruit farms are very large. This would require either several central plants or else one very large one with a great expense for piping due to the large size pipe that it would be necessary to use.

The water would have to come from ponds in most cases in Illinois. If the water in the pond which supplied the central plant gave out, the grower would face a very difficult problem indeed.

Naturally the large original investment would hinder its adoption by many growers, who might otherwise consider it applicable to their conditions.

From the way this system has been adopted in the Far West, there seems little doubt that it may be used in Illinois extensively before many years. At least it is a development which growers can afford to watch.

Several Insects Check

Pests of Peach Trees (Prepared by the United States Department of Agriculture.)

There are several insects that assist materially in checking multiplication of peach insects, says the bureau of entomology of the United States De-Ladybird partment of Agriculture. beetles are perhaps the most beneficial of these. They prey upon scale insects, aphids, and thrips. The twicestabled ladybird beetle is usually prevalent on peach trees that are

heavily infested with the San Jose scale. It is jet black in color and has two orange or red spots on the back. Ladybird beetles take their nourishment by sucking scale insects dry. They also assist materially in checking infestations of the rusty-brown plum aphid or other aphids. The adult and young ladybird beetles are sometimes erroneously thought to be the parent of aphids on account of their close relation with these pests. Peach growers should encourage the multiplication of twice-stabbed and other ladybird beetles.

Syrphus flies, lacewing flies, tachina flies, ground beetles, and some of the assassin bugs and preying mantids are other insects that are beneficial to the peach grower. Predacious and parasitic insects give considerable aid in controlling peach insects, and without the help of these beneficial insects it would be very difficult to grow a crop of peaches, even though artificial control measures were enforced.

****************** Agricultural Notes ***********************************

Mow the lawn with the blades set high and sharp.

Don't expect to cut asparagus from a newly set bed Let it grow and establish itself. . .

See that vegetables are thinned properly all over the garden. Too thick stands ruin the crop

It must be remembered that sweet clover is a biennial and if it is to be used for pasture, some should be sown each year. . . .

Selection of seed corn in the field from healthy, vigorous plants, is the first step in the control of corn ear, stalk and root rots.

Sweet clover seed for spring seeding should be secured early so that germination tests may be made and the need for scarification determined. If it contains more than 50 per cent hard seed, scarification will be profitable.

. . .

Whenever a farmer begins applying needed limestone and growing legumes in his regular rotation he not only is guaranteeing a higher average yield in his succeeding grain crops, but also is dodging, in a large measure the bad-weather jinz.

War Called on All

During the World war all the nations involved employed conscription. Such countries as Great Britain and the United States, which formerly had voluntary military service. adopted conscription as a war measure for the duration of the war period.

Another If

If/men had to pay income tax on what they say they earn instead of their actual income, ft wouldn't take long to pay off the national debt .-Houston Post-Dispatch.

John Fenstermaker Injured.

Early Monday afternoon John Fenstermaker was geriously injured when a pulley broke in the haymow of a barn which he was filling with hay. It was the barn on the Dr. Yocum farm east of Burket. The pulley, which was new, broke at the eye and traveled about th'rty-five feet to h't its mark. Assistance arrived quickly and he was rushed to the Mc-Donald hospital at Warsaw where he was attended by Drs Baum. The extent of his injuries were a compound fracture of the skull and a few body bruises received in falling off the load of hay. The doctors report that his chances for recovery are very favorable.

To remove water spots, rub with a moist cloth on which a few drops of household ammonia have been placed. Polish with a soft cloth. A gentle rubbing with a damp cloth dipped in powdered pumice stone will also re move such a spot.

Dome Foretells Weather

In a factory in England the time for starting and stopping is sounded by the gateman striking with a small hammer a steel dome suspended from a steel rod. That dome is regarded as a correct foreteller of the weather. If it will be time and warm the sound of the dome censes as the timekeeper finishes striking it. If it will be wet the dome resounds long after it is struck.

W. C. T. U. Meeting

The July meeting of the W.C. U. was held Tuesday July 9, t the home of Mrs. Lon Haimaugh. One of the principal atractions of the day was the potick dinner which lacked nothing, make it a success. The regular usiness session began at 1:30 p. n. presided over by Pres. Mrs. Russel Norris Rev. Power led he devotions, Mrs. Bess Manaring the singing, and the proram topices were discussed by Ars. C. O. Eiler, Miss Francis lark, Mrs. John Norris, Mrs. W. F. Clark, and the president. During the business session it was voted to finance the printing of the much discussed Jones law, which was recently passed by Congress; this law will be found in other columns of this paper. The next meeting will be held the second Tuesday in August, at the home of Mrs. C. O. Eiler,

Indiana Required Drill

Under the Indiana laws a century ago every able-bodied male between eighteen and forty-five was obliged to drill twice a year or pay a fine of \$1. "As \$1 was hard to raise," says an old settler. "everybody drilled."—Gas Logic.

"Boiling Pot"

While credence is given to several interpretations of the meaning of the Indian word Kalamazoo, first applied to the river on which this community is situated and later adopted as the name of the city itself, the most wide ly accepted translation is "boiling pot." Large boulders in the river at this point gave it a considerable tur bulence, hence the description is apt.

FOR THE TEA TABLE

For porch, lawn or garden parties the simple cooling drinks with a

dainty sandwich and cake make a most agreeable refreshment

-Alice Cary.

Iced Tea -Use a teaspoonful of tea to a cupful of beiling water; let the tea steep,

vell covered, for five minutes, then add ice to chill. Serve with sugar. lemon, cloves. A sprig of fresh mint dipped into granulated sugar makes a most attractive trimming for a cup of iced tea. Pineapple slices, bits of preserved ginger are all well liked.

Fruit Punch, -- Pour one plut of boiling water over two teaspoonfuls of black ten. steep five minutes. Boil two cupfuls of water and a cupful of sugar five minutes Prepare the juice of three lemons and two oranges, add to the sirup one can of grated pineapple or a pint of sliced strawberries. When cold add the tea infusion and plenty of cracked ice.

Cleveland Punch .- Mix the juice of four limes, one cupful of water, two cupfuls of sugar made into a strup. Just before serving add cracked ice and a bottle of ginger ale.

Pecan Wafers.-Beat two eggs until light, add one cupful of brown sugar. Sift three tablespoonfuls of flour, one fourth tenspoonful each of baking powder and salt. Add to the eggs and sugar with one cupful of pecan nuts cut fine and one fourth (easpoon ful of almond extract Spread on a buttered sheet, cover with halves of the nuts and bake. Cut into squares while warm.

Tea Bails .- Take one-halt cupful of peanut butter, add one-half pound each of dates and figs. all put through

Cream- puffs made as usual and filled with whipped cream or a cream custard make most delightful morsels to serve with tea. Make the puffs about one-fourth as large as usual.

Planer shavings give very satisfactory results when used for litter in poultry houses. Cut alfalfa, cut clover, or cut straw also give good results when used as litter.

Concerning Our Neutrality

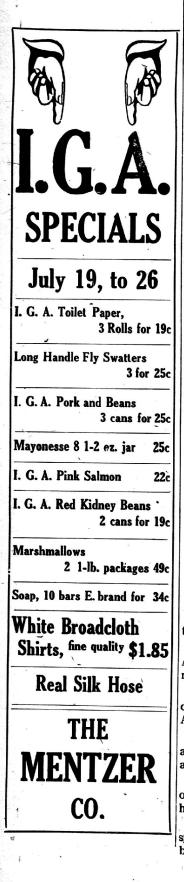

Elsewhere in this issue will, be found a full page advertisement pertaining to National and State li quor laws It will be noted that this is printed under the caption of "a paid advertisement." It is neces-sary that we head every article of a partizan nature in this fashion

because we are striving to maitain a strictly non-partizan and neutral paper. In order to maintain our neutrality, we must charge partizan matter that we print. By so charging we are released from entry into any controversy and are not responsible for any thing that appears in this manner.

Help Wanted.

We have an opening for some young man, preferably a high school graduate, who is looking for a ster dy position. The young man we have in mind is one that is of mature habits and a steady worker. The work is not hard and the compensation will be low to start -increasing as he advances in his ability to handle the work. Apply at Country Print Shop, Mentone.

Appear to Be

THE nutive was making slow head way with a hoe against the weeds and sassafras sprouts which covered the slope with their scrubby growth Behind him rose a knobby field with deep furrows in it where the rains had washed out gully: in the thin clay Further on, a rotting rail fence ran In crazy zigzaggings across the brow of the eminence and, on all sides, the clearing was enveloped by the bleak and poverty-stricken landscape. A northern tourist, who was making

a detour through the foothills, halted his car and bailed the industrious worker. "My friend," he said. "you look like

a live chap and a born hustler."

"Well," said the native, "I aim to keep busy." He haid down his hoe and advanced to the edge of the road.

"That's what I said to myself as soon as I saw you. I'm wondering why you're cottent to slave your life out in this God-forsaken country. I never saw such poor-looking soil in my life. Why don't you pull up stakes and move up into Ohio where I live?" The resident shrok his head

"You see, stranger." he answered. "I've always lived around her, and l guess I'll stay a v hile longer."

"Well," said the tourist, "every man to his own fancy, and I suppose a fellow might in time get attached even to such a spoi as this. But what can you expect to gain by staying on? You are bound to get poorer and powe er all the time."

"Mister." said the hillsman. "I'm a blamed sight better off than what you seem to think. Why, i don't own mary ah acre of this here land !" (& by the McNaught Syndicate inc.)

A CCORDING to some folks' way of thinking "to move in a circle" is not progressive—"gets you nowhere." When it comes to the new flare skirt, however, the theory is exploded for moving in a circle, a circular cut if you so please to term it, leads onto foremost chic.

Paris sponsors just such a circular skirt as the smart printed dress in the picture adopts. This one-piece circular flare is even newer for daytime frocks than the tiered flare which places one flounce or section above another.

Much of the advance information concerning fashions "on the way" has to do with flares. The mode seems inclined to flare everything that will submit to a flare. We see this in many costumes which follow up the flare of the skirt with similar flares about the blouse (peplums they call them). The cuffs on the sleeves are flared, too, and the fanciful jabots which so fashionably trim also are cut in a series of flares.

Criminals Only Sick?-

Crime is a disease, and can be cured as easily as any other malady, in the view of Doctor Toulouse, a well-known surgeon of Paris. Study of the criminal will open roads to the doctor, who then will be able to apply his theory. When it comes to the new conts, fashionists are in a decidedly flaring mood. There are flares and flares some at the sides, others at the back. also all around effects. These are achieved with ingenious godets mostly although circular cut sections are also, employed coming from slightly filed tops. Noteworthy among advance coats are types fashioned of flat fur for the upper fitted portion to which circular or flaring fabric skirts, velvet or cloth, are attached.

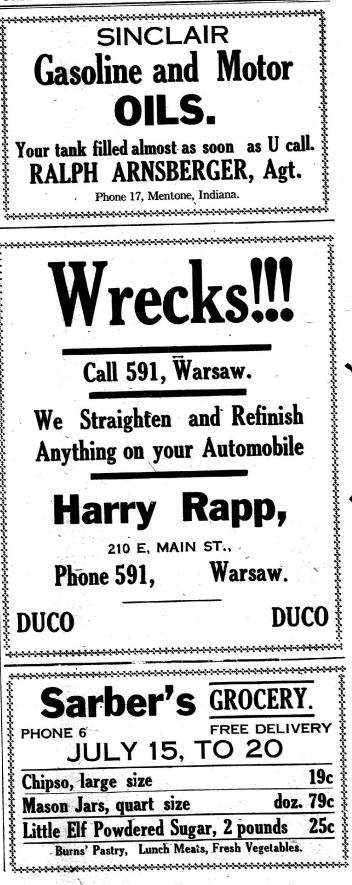

Coming back to the dress in the ptcure it carries that Parislan note of chic-the jabot collar. Ever sc many of the printed frocks are en hanced with cascades of self mate rial or of dainty lingerie.

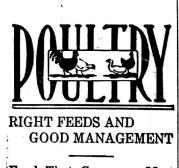

The latest fascination in lingerle accessories is that or fine plaitings of sheer batiste or organdie. Not only do they give a final touch of charm to printed dresses, but it is quite a fad for plain silk crepe to take or this pretty bit of femininity.

Homing Instinct

A black cat which accompanied a family from Annan to Stranraer, Scotland, disappeared the next morning, and 11 days later arrived at its old home. The distance is about 100 miles.

Fowl That Consumes Most Rations Is Best Layer.

Have the early hatched pullets started to lay on the range? This is the question that leading poultrymen in New Jersey are asking themselves, as the method of handling these birds has everything to do with their production record this fall.

The men know that the expected molt can sometimes be avoided if the weight of the pullets after they come into production is maintained by feeding p'enty of scratch grain. Just before the pullets begin to lay or when they are laying about 10 per cent on range, they are removed to their permanent laying quarters. Here the poultryman endeavors to get them in prime condition and, once he does so, trys to maintain it,

Proper feeds and a good system of management have been found essential if maximum feed consumption is to be secured. To lay eggs, feed is needed and the bird which consumes the largest quantity of a wellbalanced ration, lays the most eggs.

Some poultrymen will be disappointed in the early-hatched pullets unless the birds have been carefully managed during the growing period, asserts L. M. Black, poultry specialist. It takes from five to six months to grow a Legitorn pullet properly. Longer than th's is required for heavier breeds. According to Mr. Black, birds starting to lay at a younger age are often small and undersized and their eggs are likewise small, "Give the birds time to develop, furnish them with the necessities for proper development," he says, "and then have pullet eggs which can be sold as extras,"

Deformed Baby Chicks Caused by Incubation

Spraddle legs and deformity among baby chicks are usually a result of the eggs baving been kept too long before incubation. Eggs are at their best when only four days old and depreciate at a rate of approximately 5 per cent doily after they are one week old.

Another condition often responsible traces back to the health and vitality of the heas in the breeding flock. If there had been some disease in the flock or if all of the birds were not in the best of physical condition the consequent lack of vitality often results in an unusually large number of deformed chicks.

PRUNE RASPBERRY
Soon as Harvest Is Over Re-

move All Old Canes.

Now that the harvest of raspberries (red and black) is over, the proper time is here to remove the old canes, the ones which fruited this season. This should be done as soon as possible after fruiting is over, so as to allow all the sap and food which is necessary to keep them alive to go into the young canes that came up from base of the plant this spring, the writes B. W. Keith in Rural New Yorker. These old fruiting canes will die anyway before many weeks, so why leave them to "sap" the plant? They also harbor diseases and insects and if they are cut out, taken from the field and burned, it will help that much toward having healthy canes for next year's crop.

Berry pruners of any kind can be used in cutting out these old canes. inst so they are cut off close to the stump of the plant. In commercial fields, where there are a great many old canes to remove, it becomes quite a back-breaking job to do all the cutting with common hand pruners, and it also becomes quite a "prickly" job, unless leather gloves are used. To escape the back-breaking and pricking business, some wise farmer devised a combined pruner and "pincher" whereby he could cut off the canes and at the same time pinch onto them, pull them out of the row and place then in piles so they could be easily handled with a common pitchfork.

This combined affair is made by making a pair of "pincers" similar to those used by blacksmith, forge tongs for instance. On the under side of one of the jaws of the "pincers" is riveted a sharp blade made from a file or something similar, and should be attached so as to shear past the other jaw about three-fourths of an inch when the "pincers" are closed. The handles should be made so they could be driven into a three-foot wooden handle of some kind, which would enable the farmer to use the implement without stooping over. He can stand upright and catch hold of a respherry cane at the base with the "pincers' and, as the sharp b'ade cuts the cane off, the jaws of the pincers hold fast to it just above the cut and the canes can be removed.

Throw the old canes in piles between the rows, throwing the canes from the two rows into one row of piles and, before the leaves have time to dry up so they will drop off and remain in the field, remove the canes to some convenient spot and burn. It is best to burn them before they dry much to catch the insects and disBetter Prices for Your EGGGS

Satisfactory Prices and

Hog Sanitation Is Meeting With Favor

Many Indiana Farmers Saving Eight Pigs Per Sow.

(Prepared by the United States Department of Agriculture.)

Attention to swine sanitation is changing hog production on many farms in Indiana from a losing to a profitable enterprise. A report received by the United States Department of Agriculture from Dr. J. E. Gibson, federal inspector in charge of hogcholera-control work in Indiana, credits the swine-sanitation system develtis the swine-sanitation system develty with many practical benefits.

"Our reports," he says, "indicate that heretofore the average number of pigs per sow has been about five and onehalf, whereas farmers who are following instructions as to swine sanitation are not saving more than eight pigs per sow. Cases almost without number have been found where farmers were nearly ready to quit raising hogs because they were unable to save a sufficient number of their pigs to make the business profitable. Since they have been instructed in swine sanitation and are following the instructions in whole or in part they are able to grow hogs at a profit.'

Referring to the extensive use of the system in 11 counties of the state where the project has been introduced. Ductor Gibson adds that, aside from the educational work done on hog-cholera control, nothing has had such a noticeable beneficial effect on hog production.

Pullets and Hens Pay Better if Kept Apart

In order to lay the maximum num ber of eggs during the winter, pullets that are ready to lay must be well fed during the fall and winter months They should be well developed and carry a surplus of fat before they are placed in winter quarters. Since these birds are ready for egg production, they should be given feed that will enable them to lay during this senson of high prices. Allowing pullets free range to a good laying mash will bring them into production and make them return a profit during the winter.

After they stop taying in the fall, there is a natural rendency for hens in the old laying flock to eat much -less mash than they have been eating. It, therefore, is a good plan to increase the grain allowance in order to keep them in good flesh. The hens which are to be used as breeders next spring should be given a vacation this winter so that the natching eggis they lay will produce strong, healthy chicks,—Illinois, College of Agriculture.

Beans as Poultry Feed

Do Not Rank Very High Beans do not seem to rank very bigh as a poultry feed. Some poultry THE COMMUNITY FARM NEWS

men use boiled cull beans as a supplement to the regular ration but not as a substitute for the laying mash or scratch grain. Potatoes are not a very desirable poultry feed especially when they are high in price. Cull potatoes are sometimes boiled and mixed with a little bran and fed to the hens to supplement the regular ration. The best way to use cull brans and potatoes is to feed at noon the amount that will be readily eaten by the hens. Keep the laying mash before them so they will eat plenty of eggmaking material. Feed the regular scratch grain ration morning and night. The use of the beans and potatoes will reduce the amount of mash the hens will eat but will not cut down mash consumption enough to seriously curtail egg production.

Prevent Diseases

According to the United States Department of Agriculture, no sure remedies are known for contagious abortion in cattle, hog cholera, influenza of hogs, horses, and other animals; tuberculosis of cattle and poultry; distemper of dogs, cats and foxes; heaves of horses; bacillary white diarrhea, fowl cholera, roup or diphtheria, and chicken pox of chickens, and blackhead of turkeys. These diseases must be conquered by methods of prevention.

Peach Aphid Does Not

Spread Tobacco Mosaic After being accused of spreading tobacco mosaic disease, the peach aphid, a common type of yellowish-green plant louse, has been given a verdict of "Not Guilty."

This little insect has been regarded by certain investigators as capable of transmitting the virus of tobacco mosaic from infected to healthy tobacco plants. But after careful investigation, Isme Hoggan and James Johnson of the agricultural staff of the University of Wisconsin have freed the accused of any responsibility in the matter.

And as a result of these studies, certain important conclusions have been reached in respect to the spread of virus diseases of insects. While the peach aphid can no longer be convicted of spreading the serious disease known as tobacco mosaic, this insect is regarded as capable of transmitting cucumber mosaic in tobacco, a relatively unimportant disease from a commercial standpoint. Whether other species of insects are guilty or not remains to be demonstrated.

Northern Spy Apple Is

Particular About Soil The Northern Sp. apple grows well on a soil that is not too heavy. The main problem with this variety seems to be t get it thoroughly matured. On soils that are slow or that delay the tipening of the fruit, it is an inferior product. Climate complicates the matter still further so that there are relatively few places in the country where Northern Spy is at its best. Rather than trying to gue s whether or not Northern Spy will do well with you, you had better inquire from your neighbor. If you find old trees producing the kind of fruit that you want, the information will be worth more to you than any amount of theorizing.

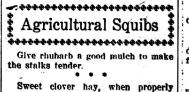

Humus Is Important

Humus is an important consideration with black raspberries. They need p'enty of moisture and this is difficult to keep in a very heavy clay soil. A clay soil will, however, grow fine crops of nice berries if it has been supplied with humus through turning under green crops or the application of barnyard manure. The red raspberry will do well in a rather wide range of soils, but the most success with them has been on a rich light clay loam.

Muscle-Building Food of Greatest Importance

Many losses in raising chicks result from fuilure to furnish an adequate amount of the right kind of protein feed. If chicks are to make a profit for the poultryman, their growth must be rapid. This requires a large amount of muscle-building material. Therefore, the ration should consist of an adequate supply of either milk or meat scraps.

Milk is regarded as the most efficlent form of protein that can be given to chicks. If it is available, it should be kept before the birds all the time. Semi-solid and dried buttermilk are good substitutes for liquid milk.

cured, is very good for dairy cows.

Shallow hoeing and more frequently is better for cabbage than deep and thorough cultivation.

Sweet clover hay in some cases, has proved almost as good as alfalfa for milk cows. A lot, however, depends on the way it is cured and the time it is cut.

"Frequently some quick growing crop must be substituted on a winterkilled clover or affatfa field that had been set aside for hog pasture. For this purpose a mixture of outs peas and rape often gives fine results.

Sweet clover, red clover and a mixture of oats, peas and vetches have been made lato very patatable sliage with little difficulty. More trouble, however, has been experienced in making desirable slinge from alfalfa.

The farmer who keeps 50 brond sows and averages four pigs to the litter can hardly compete with the farmer who keeps 25 sows and averages eight pigs to the litter, 200 pigs being produced in each case.

MICKIE SAYS-

IF YOU KNOW SOME NEWS, WHY NOT TELL OUR BIZZY REPORTER, GIVING ALL THE DETAILS? HE WANTS TO GIT ALL TH' NEWS, BUT AS HE AINT NO MIND READER, HE CANT DO IT WITHOUT YOUR HELP, GENTLE READER

SUSPE

Horticultural Hints

Trees respond to cultivation just as corn and potatoes do.

Unsatisfactory results are more often due to poor spraying than to other factors.

Black raspberries perhaps stand next to strawberries in desirability and in adaptability.

The importance of thinning fruit in orchards in which the trees are overloaded cannot be overemphasized.

Thinning reduces the amount of breakage in an overlanded fruit tree and cuts down the expenses of propplng.

The strawberry is adapted to a wide variety of soils, and is comparatively free from injurious insect pests and plant diseases. The plants rarely require spraying.

Fruit growers of experience who have studied their problems are getting beyond the fixed spray schedule. They have found that the spraying program may often give the best results if planned for particular varieties.

Deep plowing in an orchard is not advisable, especially in older orchards, because of the danger of injury to the roots. Any method that will break the crust and form a dust mulch is satisfactory. This mulch is necessary for the conservation of moisture.

We Ask for the Moral Support and Cooperation of Our Subscribers.

If our subscribers will but stop and consider the amount of extra help and material that it requires to publish the Farm News they will find that it costs about ten cents per copy to publish it. At the special rate of subscription, we receive less than two cents on each subscription, consequently, there must be financial support from some other source to make the paper break even. The other source referred to is advertising. So far we have received wonderful support from some of the merchants. The merchants and business man will gladly advertise if they know that their advertisements are read and that they receive some benefit from them. This is where our readers can help us in publishing the Farm News. If you will always read the ads and trade with the merchants that advertise and let them know that you do read their ads, they will be more willing to advertise, thereby, assuring financial success for your local paper. Moreover, great savings will be made in your purchases if you read the ads because we have compared the local ads with the ads of the stores in other communities and we find Mentone is the better place on the whole than the others. Therefore, if you do read the ads and act as we have suggested you will be helping us and yourselves at the same time, moreover, you will be assuring a healthy life for your local paper which is so necessary for every community.

When the Farm News started, we had planned on getting legal printing to the amount of \$300 per year. However, we have found that a recent law prohibits us from taking this class of advertising for five consequitive years, thereby, making us a loss of the above amount. If you as readers will give us the support that we suggested, the loss of the legal advertising will cut little figure with us and we will be able to give you the best community paper published in the state. Get in the habit of reading the ads, patronize the advertisers, and as a rule you will save money and at the same time assure yourself of a better Community Farm News each week.

SUICIDE VICTIM OF EXAMPLE

By FRANCIS M. GERTY, Illinois Psychopathic Expert.

Why so many suicidal leaps from Chicago and New York skyscrapers this last year?

It's just a habit. And it's just as easily controlled as any other habit. One reads in a paper or hears some one say that some one else has leaped to death from a tall building. One visualizes the publicity that attends such action.

One becomes subjective and plays with the thought. Then when one becomes depressed, he remembers that leap. There follows the inclination —and another suicide. If the example had not been set the brooding person would have chosen some other method of self-destruction. That's all there is to it. BANKING SYSTEM'S GREAT NEEDS

DON A. BUNNER, Associate Editor

By C. B HAZLEWOOD, President American Bankers' Association.

The greatest need in the banking system in America is for new thinking and sound management. If each of us bankers will recognize the importance of new thinking in the banking business and will encourage the application of sound management practice in our own institutions, what excuse can there be five years from now for the existence of a single unsound and unprofitable banking institution in America? I, for one, believe the upward trend is in full and victoricus swing. The lesson learned from the deflation and liquidation that followed inflation and overbanking ten years ago was a realization of the need of more exact and scientific methods. We have found that what our banking system needs today is new thinking, that we must concentrate our attention on the great objectives in banking—sound management and adequate profits.

Management, profits and liquidity are the great key words in successful banking.

I believe that in some of its phases the development of chain or other group banking may be said to be a manifestation of the movement towards better banking methods.

PERSONAL IDEAL NATIONAL NEED

By JUDGE ANDREW A. BRUCE, Northwestern University.

W HILE the American people individually are lawless, collectively they are the most law abiding of all the nations of the earth. Sovereign states have been willing to settle by court decrees great boundary and water rights, disputes such as

those between Colorado, Nebraska and Arkansas, which involved the use of the Colorado, the La Platte and the Laramie rivers; and between Texas and Oklahoma which involved the great oil deposits of the Southwest.

These controversies in most of the countries of Europe would have meant war, but the sense of law and order was so strong in this country that a supreme court of nine men in gowns was able to settle the disputes and to settle them without the firing of a gun or the calling out of a soldier.

Collectively we are law abiding, but individually we are lawless. We show a national patriotism and a national ideal. What we need, chiefly, is a personal ideal. Democracy is individualistic; democracy is selfcentered, and rebels at constraint. Democracy is lawless, but democracy is irresistible. Its possibilities are unlimited. It needs only to be faced. It needs only to be understood. It needs only to be directed.

We have a national patriotism, a national self-respect and a national ideal. All that we need is the cultivation of a personal respect and a personal ideal. What the boy and girl and what the defaulting father and mother need is self-respect and a sense of dignity that is in them.

Old School House Torn Down. Was Built in 1854.

This week saw the passing of a historical landmark on the Anna Kiler farm six miles northeast of Rochester when one of the original old "one room," school houses, that was built before the Civil War was torn down. This school was built in the then standing forest and was made of logs and has withstood the ravages of time since it was erected in 1854.

Attention to the passing of the 75 year. old landmark was brought to The News-Sentinel by Donald Carlson, young son of Mr. and Mrs O. R. Carlson of this city, who was visiting relatives in the community and witnessed the tearing down of the building. The boy in searching the premises for relics came upon newspapers which were tacked to the walls and ceiling to help keep out the cold winds from blowing through the cracks between the logs. The papers were yellow and stiff with age, one being the Cincinnati Messenger printed in 1854, and the other being a Rochester weekly printed in 1847, but the name could not be made out.

Donald was particulary interested in the building as the log school was built on the farm of his great great grandfather Wright. His great great grandparents, George and Jane Perschbacher attended the school during their youthful days and later Mr. Perschbacher was the teacher there for several terms.

Some of the logs were found to be black walnut and in excellent state of preservation, One old desk made of logs was also found and preserved. The school had a dirt floor and the windows which were few in number were very small .--The Rochester News Sentinel

PALESTINE ITEMS Received too late for last week.

Ben Andrick and wife of Warsaw called on James Turner and wife Thursday evening.

Walter Baney and family of Fort Wayne spent Sunday with Owen Hatfield and family.

It often sells e gra etter

Don't Consider Going Into Another Harvest With Out-of-date, Expensive Harvesting and Threshing Methods

HE McCormick-Deering No. 8 Harvester-Thresher reduces The McCormice-Deering its of one operation. Two men operate it and one or two boys haul grain from field to the granary. Think of the reduction in labor-three or four men this year against 12 or 15 in years past.

Think of the other advantages-grain ready for market the day it is cut. No losses due to many handlings as when grain is cut and threshed with separate machines. Straw spread back on the field to fertilize future crops or left in bunches to be picked up later if you prefer. No extra grocery bills. No extra cooking. No twine or threshing bills. No worry about help. Once Over and It's All Over. Come in and See Us-Today!

Little Cate

Arthur, Jr., a bright little fellow of four years, one evening was eagerly listening to the program coming in over the radilo. When he heard the words, "good-night, kiddles," he was much excited, and for the moment could not think of the word kitty. Turning to his daddy, he exclaimed: "Daddy, that man on the radio said. 'good-night, little cats!'"

Clean All Poultry and Swine House Windows

Cleaning the windows in the poultry house and the hog house once or twice every year will increase their efficiency at least 50 per cent on the average, according to Ralph L. Patty, iggricultural engineer at South Dakota State college.

"Many hog house windows," Mr. Patty says, "are dirty enough so that 100 per cent more light would be allowed to enter the building if they were thoroughly cleaned.

"Cleaning," he declares, "is a much better practice than putting in more windows than are really needed. Too much light in a stock barn has the disadvantage of making the flies bad in the building. The building is not iso cool in the hot summer and it will be colder in winter. The hest way is to get the greatest amount of value from the window space you already have."

Soy Bean Plant Is Most Valuable Soil Builder

The soy bean plant is one of the most valuable soil builders among the legumes. It is an excellent hay crop and the grain forms a valuable protein supplement for feeding live stock, being utilized extensively in commercial feeds and as a supplement for corn in feeding cattle and hogs. Commercial utilization of the soy hean as a valuable source of vegetable oil forpaints, enamels, varnishes, linoleum, soap stocks, rubber substitutes, glue, printers inks. glycerin, as well as various food products waits only upon a sufficient supply of beans to afford a year around supply for oil extracting factories.

Proteins and Nutrients

Investigations at agricultural experiment stations have shown that certain amounts of proteins and total digestible nutrients must be fed to maintain an animal of given weight and to produce a certain amount of milkof a given test. Any excess of the amounts needed will be converted into animal fat or be eliminated in the urine and feces. Protein-in great excess of the requirements may stimulate milk production but it may also burn out the cow and very often manifests itself in temporary or permaent sterility. A balanced ration is which meets the requirements one both for maintenance and milk production.

Where "Q" Got Name

The name of the letter Q comes from the French queue, meaning a tail, as the letter O with a tail:

Trust's Opportunity

An oceanographer suggests that the world's weather might be stabilized by keeping the polar ice constantly on the move. What a chance, that, for the power trusts to sign up some service contracts.—New Orleaps Times-Pleayune.

MENTONE ITEMS

Robert Snyder of Chicago had his auto stolen the other day.

Kenneth Riner and Joe Igo spent Friday afternoon fishing at McCluers lake.

Miss Mildred Temple of Convoy Ohio, is visiting in Mentone as a guest of Miss Thais Greulach.

Mentone was troubled with a band of Gypsies Thursday. The citzens and merchants were not long in getting them started on their way. No losses were reported,

Mrs. W. F. Clark, Miss Elma Cattell, Miss Mildred Anderson, and Mrs. Alice Smith visited last Wednesday with the Ballards at Andcrson. They report the Ballards doing fine and business increasing every day.

Mr. and Mrs. Max Dunlap and daughter Lucille, arrived in Mentone about 2 a. m. Friday morning for a visit with Mr. and Mrs. Henry Mills. Max reports that he made a record_trip leaving Hastings at 6 a. m. Thursday morning. The trip is about 600 miles long.

Pig Crop Five Percent Below That Of Year Ago

The spring pig crop in Indiana appears to be five percent smaller than last year, according to a statement put out by the bureau of agriculture statistics of the Purdue University Agricultural Experiment Station and the U.S. Department of Agriculture. Only 89.8 percent as many sows farrowed but the number of pigs saved was 6.3 compared to 6 last year. The spring crop is 124.4 percent of the crop of last fall, the survey showed. If farrowings the coming fall as shown by the survey next December should bear the same relation to intentions as in the past the pig crop will be about 85 percent of last fall.

Church Of Christ

Will fill regular time here next Lords Day. Morning Services beginning at 9:30, Discourse 10:30, and Communion at 11:30 also will preach at 7:30 p.m.

If you are not a regular attendant at Church Service get the habit. It will do you good, a special invitation to you.

Just A Suggestion

We wish to call the attention of our farmer readers to the advertisement of Weldon Reed in which he gives a description of the Mc-Cormick-Deering Harvester-Thresher. Upon reading this ad it occured to us that this would be an ideal machine to be owned and operated by a ring, the same as the principle by which threshing rings operate. It seems that the Harvester Thresher offers so many savings and advantages that an investment of this kind would pay large dividends to the owners. Why don't you see and have a talk with Mr. Reed on the subject?

Tramp—An lady, I ain't had no food fer two days! Lady (who is reducing)-Humph!

That's nothing, I haven't eaten any. thing for three days!

HONK! HONK!

"Why George did you hear father was robbed last night?" "Why no! He must be patronizing the same garage I am."

Rare Volumes

It is thought that there are but 101 printed books in existence that were made before 1500. Nearly one-third of these rare books are owned by the J. S. Johns, Minister Library of Congress.

SOME SANDWICHES

A chicken sandwich is always a favorite for any occasion.

Toasted Chicken Sand-! wiches.—Grind very fine one-fourth of a cupful of the white meat of chicken and moisten with **a** little cream. Season and heat. Spread the mixture on **a** slice of trimmed toast Sprinkle with finely chopped

cheese and paprika. Place under the broiler and melt the cheese, cover with another slice, cut in two. Garnish with potato shoestrings and water cress.

Chicken a la King.—This is a very attractive open sandwich. Cut slices of bread one and one-fourth inches thick, cut out a small place in the center, butter and toast in the oven. Fill the depression with hot chicken a la king, sprinkle with cheese and brown under the broiler. Garnish with mushrooms.

Chicken and Grape Sandwich.— Spread buttered toasted bread with mayonnaise, then arrange thin slices of the white meat of chicken on it. On top of the chicken place thin slices of seedless grapes, press on a leaf of lettuce and cover with another slice. Trim, cut into any desired shape and serve on lettuce. Other grapes seeded and chopped may be used.

Chicken and Almond Sandwick.— Chop and mix one-fourth cupful each of the white meat of chicken and blanched almonds. Add just enoughmayonnaise to blad, season and spread on toast. Garnish the borderwith thin slices of pickles, cover with another slice and serve on lettuce.

Chicken and Brocoli Sandwich.— Chop one cupful of cooked seasoned brocoli well drained. mix with the pounded white meat of a chicken to make a good mixture. Spread on buttered bread, cover with another slice and pour over a hot rich cream sauce.

Curried Sandwich of Chicken.— Place thin slices of chicken on buttered bread and pour over a rich white sauce that has been seasoned with a tenspoonful of curry powder. Serve

Make Money Raising Pigs by Saving Them The sure way to make money raising pigs is to save them. Every little pig that is lost increases the cost of those saved. Very commonly one-third to one-half the pigs farrowed die before weaning time. A pig at farrowing time is worth or has cost approximately three dollars, and it pays well to keep as many of them alive as possible. Aim to be on hand when the sow farrows to see that everything goes well and that the little pigs get their first meal as soon as possible. Then be sure they have a place to keep warm. Have a guard rail around the pen or a protected corner with most of the bedding in this protected place. **Constructing Silo for** Use in Summer Months One of the first things to consider in deciding on the size of a silo is the number of head of live stock to be fed from it during the warmer months when the silage on the surface begins to mold shortly after it is exposed. Two inches or more must be taken from the entire surface each day in summer to avoid loss by spoilage, sufficient for about 26 head from the 14-toot silo and 53 head from one

The young orchard should be kept clean cultivated the first part of the senson and a cover crop sown later on. This cover crop on being turned under, will add organic matter and plant food to the soil and assist in obtaining good growth. Strong growth in the young tree is very essential.

Mrs. George Black spent Friday afternoon in Warsaw on busi-

Mrs. Dale Cook and Mrs. Elmer Huffman spent Sunday afternoon at the home of Mr. and Mrs. Emmett Taylor.

Mr. and Mrs. Omar Igo and Mrs. Lucindia Black of Mentone spent Sunday afternoon with Mr. and Mrs. Ernest Igo.

Mr. and Mrs. John Creakbaum spent Thursday night at the home of Mr. and Mrs. Horace Rickel where they enjoyed ice cream.

Mrs. Ora Tucker and daughter Lillian, Mrs. H. V. Nellans and son Dale spent Thursday at the home of Mr. and Mrs. Clarence Tinkey.

Mr. and Mrs. Mars Tucker and family, Mr. and Mrs. Floyd Tucker and Francis Holloway spents Sunday in Anderson the guest of Mr. and Mrs. N. J. Ballard.

Mr. and Mrs. Elmer Huffman and children Mr. and Mrs. Bernard Black, Miss Lillian Igo, and Mr. and Mrs. George Black enjoyed a picnic at Silver Lake Sunday evening after which they enjoved skating.

Ben Welch Barn Burns

About one o'clock Tuesday after spontaneous combustion burned to the ground a barn belonging to Ben Welch north of town. The Mentone Fire Department was called and through their heroic efforts a corn crib full of corn was saved. The contents of the barn were partially covered by insurance. An estimate of the loss was not made.

For Sale-12ft 1 inch line shaft with rigid and frictional pulleys. A real bargain see Clifford Sult or phone 2 on 153 Mentone.

For Sale-One pair 4 1-2 ton Fairbanks-Morse wagon scales. Steel frame and compound beams tone Lumber Co., Mentone.

PALESTINE ITEMS

Mrs. I. D. Fisher and son Harold spent Friday with Mrs. Louis Eaton.

Mr. and Mrs. Russell Huffer and daughter Margaret, were Mentone Shoppers Thursday evening.

Mrs. William Hatfield returned home Friday from Ohio where she visited for several days with relatives.

Mr. and Mrs. Vernon Black and children of South Bend are spending a few days with James Black.

Mr. and Mrs. Paul Wright of Chicago are here for a few days visiting with Mr. and Mrs. Huva Hagen.

Mrs. Owen Hatfield and daugh ters June and Joan called on Mrs. Roy Sloan Friday.

Mrs. K. B. Holt and Mrs. Huva Hagen were Warsaw shoppers Thursday afternoon.

The Misses Bonijean and Edith Cochran of Burket are spending a few days with their grandparents, Mr. and Mrs. Riley Fisher.

Mrs. George Cochran of Burket and Mrs. Nancy Cochran of Palestine are spending a few days with friends in Elkhart.

Mr. and Mrs. Riley Fisher, Miss Francis Cochran, Mrs. Heman Leiter and daughters Doris and Betty and Mrs. Carl Hatfield were Mentone shoppers Thursday evening.

HARRISON ITEMS

Mr. and Mrs. Harry Smythe have moved to Warsaw to make their home.

Mrs. Marie Marquess and son Lowell and daughter Mary Alice spent a few days last week with Mrs. Alice Byers in Warsaw.

Mrs. Alice Byers, daughter Ruth and son John of Warsaw spent one day last week with her parents Mr. and Mrs. Williard East.

The Misses Lucille and Esther called at the Willard East home Wednesday and was accompained home by Miss Etta Mae East who was their guest for the day. Jefferies. The next meeting will be a joint meeting of all the townships of Fulton Co. to be held at the Rochester gymnasium on Aug 20th.

A number of Harrison people attended the movie at Mentone Thursday night.

Mr. and Mrs. John Minear have returned home after spending some_time with their son in West Virginia.

TALMA ITEMS

Joseph Grass is still quite poorly at this writing.

Nelson Farry of Dallas Texas was a guest last week of Mr. and Austin Farry.

Mr. and Mrs. Oliver Davis and family of Hammond were week end guests of Mr. and Mrs. Joseph Grass.

Ernest Bryant and wife of Fort Wayne were called home on account of the serious illness of his mother Mrs. George Bryant.

There will be a quarterly meeting and a basket dinner next Sunday at the Methodist church in Talma. Everybody invited to attend.

Mr. and Mrs. Peter Horn, Mr. and Mrs. Elmer Widner of Warsaw and Jacob Grass were Sunday afternoon callers at the Joseph Grass home.

In honor of the 16 birthday of Harold Walter, 16 friends gathered at the home of his parents, Mr. and Mrs. Lon Walters, on last Wednesday evening and gave him a complete surprise.

Miss Ferris Bryant entertained to dinner Sunday at the home of of her parents Mr. and Mrs. Philip Bryant of near Talma, the following guests, Mr. and Mrs. Clarence Hill, Mr. and Mrs. Conrad Irvin, Miss Hattie Shobe, Mr. Elmer Pennington and Ralph Hatfield all of Rochester.

The Newcastle Township Farm Bureau meeting was held last Wednesday evening at the Talma High School, with a goodly number present, a splendid program was given. With short talks from County Agent Rosenburg, County chairman Wm. Gray, and Ancil Jefferies. The next meeting will be a joint meeting of all the townships of Fulton Co. to be held at the Rochester gymnasium on Aug 20th. Farmers State Bank, Mentone, Indiana.

The steady, substantial growth and progress this bank has experienced for a long period of time and especially during the past few years of unfavorable agricultural conditions; merits your careful consideration in selecting a bank home in a conservative and well managed banking institution.

If you are not already a customer of this bank, we invite you to confer with us.

It has been found by an airplane manufacturing firm in St. Louis that dressmakers are more adept than men at covering the wings and fuselages of planes. Two of the girls thus employed are shown above at their work.

Orchard Soil Fertility

Needs Right Attention Without spraying and sometimes without pruning it is useless to waste money on fertilizers, according to R. S. Marsh, of the University of Illinols. There are several different ways of fertilizing orchards. The straw mulch at a depth of four to six inches and the application of 150 to 200 pounds of some good commercial fertilizer are very good. Clean cultivation with about one-half of the above fertilizer works well where late cover crops are used.

The sod and sod mulch seem to be the most popular. This method adapts itself to rolling ground better than the other methods. Manure applied at the rate of 400 to 600 pounds per tree is recommended. Nitrate of soda or ammonium sulphate can be used at the rate of one-fourth pound for each year the tree is old. This is applied in the spring as the buds are swelling or bursting. Legume cover crops and legume mulches give the cheapest means of maintaining soil fertility.

Materials for Spraying Apples Well Established

At present the materials for apple spraying are pretty well standardized Lime-sulphur, either homemæde or commercial, llquid or dry, is recognized as the outstanding fungi-ide. Bordeaux being used only in localities where blotch, phoma spot or frog-eye are problems. Arsenate of lead and nlcotine sulphate are given the pref erence as insecticides. Oil spriys at the dormant period are coming into

favor, both emulsions and miscible oils being used, the recomized standard at present being 4 per cent oil content.

Success With Peaches

To have a very successful peach orchard it is necessary to begin building up the ground before planting out the orchard. The best way to do this is to put the prospective site in sweet clover for a few years. This builds up the supply of nitrogen, increases the humus content of the soil, and thus increases the water holding capacity It improves the physical condition of the soil generally. The soil becomes a better work shop for the manufacture of plant food.

Horticultural Facts

Use spraying equipment capable of doing the work required.

The record of strawberry production compares very favorably with the production of other crops.

Trees well cared for and kept clean will be larger and bear fruit sooner than those neglected, of the same age.

Anthracnose of raspberries can be controlled by spraying the bushes with lime-supplur four times during the growing season.

Don't forget to anoint the currant bushes with a good dose of tobacco insecticide to check the spread of green plant lice.

Message From the Other Shore

T WAS at a spiritualistic seance The medium specialized in sum moning the spirits of great personages back from the Other Shore, and the result was a varied entertainment highly satisfactory to the assembled true believers. Thomas Jefferson played rather badly on a bugle, and Mary Queen of Scots rapped on a table and made a chair waltz on two legs, and Mark Anthony strummed a guitar, and Sir Isaac Newton ad dressed the reverent gathering briefly. speaking with a pronounced South Brooklyn accent.

At this juncture the medium's hus band made a special announcement: If any person present wished to_com municate with the shade of some il lustrious one who had not already tak en part in the evening's program. Madame would endeavor to material ize the individual desired.

An English woman who was a de vout churchwoman spoke up. She would like to behold and speak with Cardinal Newman, or at least, she hoped to have a message from him. personally delivered

Madame agreed to try. She went off into a trance, uttering muffled meaning sounds. Presently the black draperies of the cabinet were agitated and then, in the pale, bluish light which focused upon the cabinet and left the rest of the room in darkness. appeared a dim figure swathed in white.

In the midst of a hushed silence this shape took one step forward raised two fingers of the right hand in the gesture of the apostolic bless ing and in impressively deep tones uttered the following:

Benedictine !" (C, by the McNaught Syndicate, Inc.) **GOLD DIGGER DEFINED**

Grace is accused of being a goiddigger.

Fire Destroys Barn

A fire supposedly caused by spontaneous combustion burned to the ground, Friday morning, a barn belonging to Orien Deaton. barn belonging to Orien Deaton. The fire was discovered about four-thirty by a neighbor, Wm. Guy. The Mentone fire department was notified and answered the call. But due to poor telephone service the call did not reach Mentone in time for them to be of much service. Almost nothing was saved. The barn contained 200 bushels of corn, alfalfa hay, harness, wagons, a manure spreader. and other farm implements. Insurance partially covered the loss. This is the third fire that Mr. Deaton has ex perienced. Several years ago his house burned and last September his barn burned.

Fined \$10 For Bad Egg Sale

Harry Blodgett of Mentone was fined in the court of Justice A. T. Griffith \$10 and cost amounting to \$21.75. He was found guilty 😨 of the charge of selling rotten eggs to the Schlosser Bros.

The complaint was filed July 6 by Frank Harmon. Blodgett entered a plea of not guilty, but was found guilty by the justice. He claimed he had purchased the eggs from a third party. According to officers 12 dozen of the case of 24 dozen were bad.

In the interests of health and honesty the officers are watching closely those who may be inclined to sell impure food and officers urge that complaints be filed with them at once where the purchaser finds he has been sold impure or decayed food.-Warsaw Daily Times.

In Conflict With Peace Five great enemies of peace inhabit with us-avarice, ambition, envy, anger and pride; if these were to be banished, we should infallibly enjoy perpetual peace .- Petrarch.

[&]quot;Fraudulent use of the males. eh?"

Improve Peanut Ration for Hogs

(Prepared by the United States Department of Agriculture.) Peanuts are used to a considerable extent in hog feeding in the peanutgrowing areas of the United States, says the United States Department of Agriculture. and are usually fed alone or with mineral supplements only. The efficiency of peanuts for growing pigs is very materially increased, how-

ever, according to the department, when tankage is included in the ration as a protein supplement. Tests at Beltsville.

This conclusion is the result of a series of feeding tests recently completed at Beltsville, Md., by O. G. Han kins and J. II. Zeller, of the animal husbandry division of the bureau of animal industry, and conducted in connection with the study of peanuts in the soft-pork problem.

Because many young pigs are commonly fed peanuts without protein supplements, the question arose as to whether the prevailing method of feeding was producing the best possible results. Three experiments were undertaken in which different rations were compared. In the first experiment, the investigators fed two lots of pigs shelled peanuts and minerals. one lot with tankage and the other without. In the second experiment the rations were the same as in the first except that the peanuts were un shelled. The third experiment was similar to the second except for a change in minerals.

The results are noteworthy in show ing the value of tankage as a supple ment to pennuts and minerals in the ration for young pigs, and are discussed in Technical Bulletin 110-T, entitled "Correcting the Inefficiency of Pennuts for Growth in Pigs," just issued by the United States Department of Agriculture.

Rosults Summarized.

As an average of all the experiments, say the authors in summarizing the results, the feed cost of 100 pounds of gain, not including minerals, was \$0.92 for the tankage-fed pigs and \$17.86 when no tankage was fed The cost of the minerals did not exceed 35 cents per 100 pounds gain for either group.

The results also show that peanuts with only mineral supplements are not efficient for pigs in the early stages of growth. The addition of tankage more than doubled the daily gain of the pigs in the experiments.

The amount of each nutrient consumed per unit of gain was also much less for the tankage-fed pigs than for those not receiving tankage.

A copy of the bulletin may be obtained free as long as the supply lasts, by writing to the office of information, United States Department af Agriculture. Washington, D. C.

DORAN ITEMS _____ Did you read Black's ad?

George Creakbaum is suffering

Mrs John Shriver who has been quite ill is reported better at this writing.

Mr. and Mrs. Emmett Taylor are the proud parents of a baby boy who weighs ten pounds.

Don't forget to read Black's ad. Russel Eber of Fort Waye spent the week-end with his parents, Mr. and Mrs. John Eber:

Edward Davis of Fort Wayne spent the week end with his parents Mr. and Mrs. Walter Davis.

Mr. and Mrs. Bernard Black were callers at the home of Mr. Clarence Tinkey Wednesday evening.

Mr. and Mrs. Lloyd Creakbaum and son spent Wednesday evening with A. E. Black and daughter.

Mrs. George Smith and children spent Tuesday at the home of her parents Mr. and Mrs. Lloyd Creakbaum.

Mr. and Mrs. Gus Mollenhour spent Tuesday evening with his parents Mr. and Mrs. Hiram Mollenhour.

Mr. and Mrs. William Arter, Mary Irene and Billy Merley spent Monday evening with Mr. and Mrs. George Black.

Mr. and Mrs. Ralph Tucker of Akron and Mr. and Mrs. Bernard Black spent Tuesday evening with Mr. and Mrs. H. V. Nellans and family.

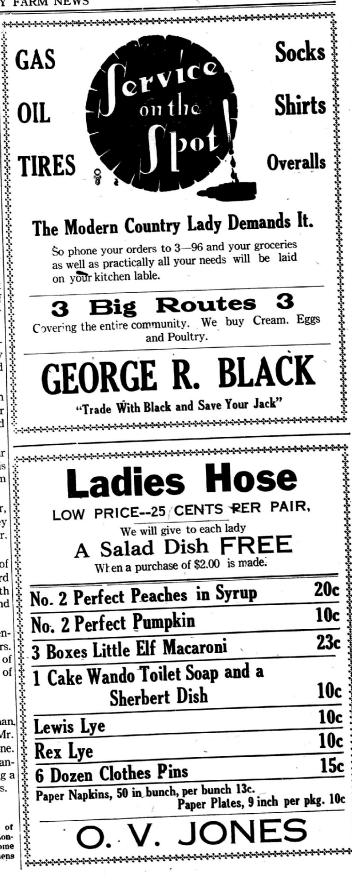

Mr. and Mrs. Chas. Black entertained last week Mr. and Mrs. Wengerd and Mrs. Dunner of Polk, Ohio and Mr. McConnell of Wellington Ohio.

Read Black's advertisement.

Mr. and Mrs. Elmer Huffman, spent Tuesday evening with Mr. and Mrs. O. N. Igo of Mentone. Phyllis Jane Huffman accompanied them home after spending a few days with her grandparents.

Insect World

In the entomological department of the Natural History museum in London, are four million insects. In some instances there are 70,000 specimens of a single family.

Small Grains and Various Pasture Grasses Are Destroyed by Insect.

(Prepared by the United States Department of Agriculture.)

Its work often mistaken for damage by cutworms, the larger sod webworm is often a pest of economic importance. East of the Mississippi its range is over most of the territory north of the Ohio river, although it; has appeared in Kentucky and Tennessee. West of the Mississippi it has been found in Missouri, Kansas, in the Texas Panhandle and even close to the Mexican border in New Mexico, from which point the boundary line of its range strikes northward, avoiding Arizona, but with appearance in Utah and in Washington. Its principal damage has appeared in the Mississippi valley from Ohio to Iowa. Facts Concerning Pest.

In Technical Bulletin N. 31-T, "The Larger Sod Webworm," published by, the United States Department of Agriculture, George G. Ainslie of the bureau of entomology brings together. all the available facts concerning the pest, for the convenience of technical workers, and agricultural leaders as well as for farmers in the area where the webworm is likely to prove destructive. Mr. Ainslie's conclusion is, that "when once present in a field it. can be controlled with difficulty, and measures used against it should be preventive rather than remedial. Such measures are crop rotation, ample fertilization, and, in the case of sod land intended for corn the following year, early fall plowing."

In the moth stage of its life the insect is comparatively large, yellowishgray, and with a wing expanse of an inch or more. The moths fly about at twilight, and drop eigss that develop into the injurious webworms. There, are two broods a year, and the first is likely to injure corn and small grains. The second is more likely to injure grasses in pastures. The larvae winter in a closely-woven case of white slik covered outwardly with, earth particles so that it has much

Parasites Attack Larvae.

The larvae are attacked by several parasites. Birds, mice, moles, ground squirrels, gophers, and predacious insects probably do much to keep down the numbers of the sod webworms. Poisoned baits have been tried without success. In case the injury to corn is so serious as to require new planting, the new rows should lie between the old ones and the infested plants should be allowed to stand as long as possible so that the webworms will complete their growth on them, without turning their attention to the younger plants. The moths emerging from the plants will seek grassy places and will not trouble the corn.

The bulletin may be obtained, while the supply lasts, by applying to the Department of Agriculture, Washington, D. C.

Obituary

Othnell M. Gates was born at Butler, Indiana, July 9, 1896. He was a son of John F. Gates and Sarah Eckert Gates. In 1873 John F. Gates and family moved to Columbia City, Indiana, where they resided until 1880, when the family moved to Findlay, Ohio. In 1883 the family came to Harrison Tnwnship, Kosciusko County, Indiana, and purchased the farm which Othnell M. Gates owned at the time of his death, and upon which he had resided during practically all of his life time.

On the 30th, day of April 1892 Othnell M. Gates was united in marriage to Clara Eaton, of Harrison Township, Kosciusko Co., who survives. They were the parents of five children, all of whom survive, the children being, Claud Gates, Cleo Hammer, Wanda Davison, DeWitt Gates and Paul Gates. He also leaves surviving him two brothers, Norfotd S. Gates, of Findlay, Ohio, and Rev. E. T. Gates of Alhambra, California. One brother, Benton E. Gates of Columbia City, Indiana, preceeded him in death.

Othnell M. Gates was at the time of his death which occured July 15, 1929, aged 60 years and 6 days.

The subject of this sketch was a member of the United Brethern Church. He was a man of great industry, always interested in the welfare of the community in which he lived. His greatest interest, however, was in his home where he has always been a kind and indulgent husband and father.

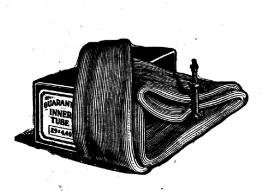

CARD OF THANKS

We wish to thank our friends and neighbors who were so kind in their expression of sympathy, and thoughtfulness during the time of our recent sorrow.

Mrs. O. M. Gates and family

Covers Many Species The term "Spanish bayonet" is ap plied to any one of various species of Yucca with sword-shaped leaves.

Facts for Egg Producers WHO WANT **'More Money for Eggs**"

Although there are more hens on farms, yet there will not be an over-supply of high quality eggs.

More money can be had only by producing high quality eggs. We have the buyers and we pay for quality.

Are those which are of good size, clean, sound, strictly fresh and white yolks, ordinarily not more than two or three days old.

If you need further advice in producing quality Eggs get in touch with Mr. C. L. Manwaring, or with your State Agricultural College and the U.S. Department of Agriculture, at Washington, who are interested in this problem.

Prices of ordinary eggs are low, but prices on high grade quality will continue to advance.

Louis Kadans Co., Inc., 306 Greenwich St., New York.

IF STRAW or felt has become an old story when it comes to the chapeau, why not "something different"-say crochet ostrich, reversible satin, chenille, lace or gay ptaterned silks. Yes, indeed! There's just any number of interesting media which milliners are working into hats this season.

There is the little cap-toque in the triangle in the picture-a Paris model, of course, one decides that at first glance. Never would guess what it made of-crochet ostrich! Just that. Intriguing idea, is it not? Carries promise of what's coming for fall. Black and white clipped ostrich is woven, or rather, crocheted just as you see it here and it is surely novel and attractive.

Chenille is an excellent item, too, crocheted similar to the ostrich hat just mentioned. New berets shown in advance millinery collections are crocheted in three and four colors of chenille in small checked and plaided designs.

Then there are those novelty sports hats from Renee, which are woven of

UALITY Eggs

POUR COOL WATER ON HEAD OF HOG

Icy Liquid on Animal's Body Will Do Much Harm.

When a hog gets overheated, pour cool water on his head, but not on his. body, warns J. W. Wuichet, extension specialist in animal husbandry at Ohio State university, "Pouring water on" the body of the hog is for some read son very likely to kill him," says Wuichet. "Pouring water on his head: cools him off and helps him,"

Hogs should be protected from any necessity for violent exercise during hot weather, Wuichet says. There should be no reason why they should be-compelled to run about or even to move more than necessary. They should have plenty of shade, and cool water available at all times.

"The hog has very little natural protection from the sun, and consequently some artificial protection must be provided," says the specialist. "Natural shade probably is best, but it is not always available in the hog lot. Where it is available a covering about four feet from the ground and open on all four sides will usually prove satisfactory. In some localities it may be advisable to give additional protection on the side in the direction of the prevailing storms. The shelter need not be elaborate. Almost any sort of open framework over which straw, fodder, or similar material is placed, will suffice

"Many hog men use a wallow as an additional protection against overheating. If properly constructed and handled, the wallow is a great aid. There is one possible objection to its use for the man who is shipping hogs in the summer time. The hogs which are accustomed to the wallow will suffer more severely when they are loaded in cars for shipment, and the loss from this course will be greater than if the hogs had been innured to hot weather."

Give Additional Feed

to Pigs in a "Creep" When about three weeks old, the pigs will begin to eat grain from their mother's trough. It is important that they be now supplied additional feed, where the sows cannot get at it. This is best done by providing a "creep" in a corner of the paddock or pasture, with openings of such size that the pigs can run in and out while the sows are excluded. At first a little cracked corn seems about the most palatable feed. Later they may be fed a suitable mixture of concentrates, either being hand-fed all they will clean up twice or three times a

day or else being fed by means of a self-feeder. For young pigs skim milk and buttermilk are easily the best of all protein-rich feeds. Nothing else nids so greatly in keeping them growing lustily. The concen-trates fed pigs at this time should consist of the farm grains, with a considerable proportion of proteinrich feeds like middlings (standard middlings or preferably flour middlings), linseed meal, and tankage. If there is an abundance of skim milk or butternilk, relatively little of other high-protein feeds need be used.

Live Stock Notes

The sow and pigs should not be kept in the individual pens longer than ten days.

Pigs will usually begin to eat a little feed when they are three to four weeks old. .

Cattle and alfalfa make the best combination to keep fertility on the soil so let both be taxed alike.

Pigs fed semi-solid buttermilk gain faster than those fed skim milk. A possible explanation of the fact may be that the skim milk was too bulky. . . .

Calves that have had no grain, but have suckled good milking cows, may be sold direct to the butchers at seven and nine months old at attractive prices, . . .

A lamb that is kept gaining from birth until ready for the market will produce its gains at a lower cost than if it is allowed to fool away its time on part of a ration.

Barley, in an experiment recently completed at Colorado Agricultural college, proved slightly superior and a little cheaper as a feed for hogs than corn for making gains.

Cattle feeders surely do need a littlê fluctuates so much. protection because the cattle market

Hogs are very susceptible to both internal and external parasites. They must be guarded against these, or profit may be easily turned into loss.

As soon as the lambs are able to nibble at grain and hay, provide a creep for them where they can eat undisturbed by the ewes. This is very important from the standpoint of economical returns.

Term Simply Shortened

Undertakers were formerly known as funeral undertakers. The present term is merely a contraction of this expression.

World's Longest Plant

The kind of seaweed known as kelp is said to be the longest plant in the world. It has been known to reach a length of 1.500 feet.

Sanitation Urged for All Sections

THE COMMUNITY FARM NEWS

Clean-Up of Fallen Fruit and Destruction of Dumps to Kill Pests.

(Prepared by the United States Department of Agriculture.) Discovery of the Mediterranean fruit

fly in Florida and infested Florida citrus fruit in several other states recently has centered the attention of officials of the United States Department of Agriculture on wide-spread clean-up measures in orchards and fruit packing houses.

A Clean-Up Is Necessary.

Clean-up of fallen fruit and destruction of fruit dumps and rejects is particularly necessary this year not only because of the fruit fly but also because of other common pests, according to Dr. C. L. Marlatt, chief of the plant quarantine and control administration.

Such clean-up of orchards and sufe disposition of packing house culls is probably seldom made, Doctor Mar latt says, but the necessity is clearly apparent and he has urged all department inspectors to give wide pub licity to the need for the practice and if possible to secure its general adop tion.

The reports of finding infested Florida citrus fruit received from other states mention only the finding and destruction of such fruit, Doctor Mar latt says, and make no mention of any clean-up of storage places and premises. Doctor Mariatt is anxious that fruit handlers, dealers, and the pub. lic generally realize the necessity of thoroughly cleaning and disinfecting cars, storage rooms in refrigerating plants boxes and other continers, and the immediate surround us in shops or other places where such fruit has been kept.

Reduce Risk of Spreading.

Risks of spreading the fruit fly and other pests can be very much reduced, Doctor Marlatt says, by making sure that all boxes and other containers are thoroughly cleaned, followed by very careful sweeping up of all dirt, dust, and trash which may be beneath the boxes. Such sweepings should be carefully taken up and burned

Applications of oil, boiling water or steam to all places likely to be infested with the larvae of the fruit fly are advisable.

Quantity of Grain to

Be Fed During Summer One of the greatest problems in pork production is that of determin ing the quality of grain to be fed during the summer to growing pigs. The most common practice is to limit The grain to the amount that will allow for a slow rate of growth, as it is assumed that with concentrates high in price the cost of grains on a full feed will not be economical. In summer, pastures are a cheaper source of nu trients than are other feeds. More

efficient use of pasture crops is made by hungry pigs than by those having plenty of grain consequently limiting the allowance of grain is logical if one of the main considerations is to get as high a return as possible per arro of nasturo

***** Poultry Hints

Feed table scraps and kitchen waste.

Also feed grain once or twice a day. Purchase well-matured pullets rath-

er than hens.

Eggs should be marketed at least twice a week.

Waten s... tinal parasites, • • • Watch growing pullets for intes-

Oats are not at all suitable feed for geese or ducks.

Keep hens free from lice and the house free from mites. ٠ ٠

The oftener one can get the eggs to the market the better.

The requirements of incubation for turkey eggs are the same as for the incubation of chicken eggs. . . .

Adopt a definite program of sant tation on your farm to reduce the loss of chicks. About half the losses of young chickens occur during the first four weeks. . . .

A good market egg should be fresh, clean, have a good strong shell, and be a good size. Infertile eggs are better, as they keep longer at high temperatures than fertile eggs.

As soon as an egg bécomes dirty it goes into the lowest fresh egg grade. To get clean eggs supply plenty of nests, at least one nest for every five hens. Construct your nests so the hens cannot roost on them. Keep plenty of litter on the floor. Clean the dropping boards daily or cover them with 2-inch mesh wire.

Brings Out Truths

A little philosophy inclineth a man's mind to atheism; but depth in phi-tosophy bringeth men's minds about o religion - Bacon

Humanity's Masquerade

"Few persons are entirely happy," said Hi Ho, the sage of Chinatown. "So we join in merry masquerades each in the hope of momentarily assuring himself that he is somebody -Ise."-Washington Star

"Coaxing" Geysers

The Geological survey states that sometimes soap is used as an expedient to hurry up the action of a geyser. The soap makes a film over the water and causes an accumulation of steam. When the steam accumulates to a certain point, it causes the erup-'ion.

Farmers and Town Folk Meet to Discuss New Fire Fighting Equipment.

About thirty-five public spirited farmers and town folks met at the town hall Wednesday evening to discuss the possibilities of securing adequate fire fighting apparatus for the community. The meeting was called to order by K. A. Riner who set forth the reasons for the meeting and asked for personal opinions and general discussion of the matter.

C. O. Herendeen in a little talk said that he believed that the farmers within a radius of five or six miles would be willing to do their share in the matter. It was pointed out in the meeting that the Mentone Fire Truck had made two trips to the country in the past week and on both occassions saved considerable property and would have saved evén more if they could have had a higher speed truck. With the purchase of a more adequate machine, farmers could easily be served within a radius of five or six miles. It is not that Mentone does not want to send their truck, because Mentone is willing to go and do as much as she is able under the present circumstances, but at the present they are limited.

It was of the opinion of Russel Norris that a wagon such as the continuous chemical truck sent by Rochester to Mentone a year ago would be the one of most service to the community. The exact price of such apparatus was not known but it was thought that \$4,000.00 or \$5,000.00 would buy the truck needed. The town board expressed their willingness to co-operate with the farmers in getting a new truck, even though the present apparatus is adequate for the needs of the town.

Russel Norris also pointed out that the farmers in other progressive communities were organizing fire companies and purchasing fire equipment. He thought that by co-operating with the town it would save the farmers considerable expense to do the same in this community.

The equipment considered adequate to fight country fires would consist of a high speed truck, capable of running five or six miles into the country in approximately ten or fifteen minutes from the time the alarm was received, a motor driven pump which would pump water from a cistern, stream or any source of water supply and a complete, high pressure chemical outfit.

In order to find out whether or not the farmers are interested sufficiently enough to warrant the purchase of a truck, it was decided to send out questionnaires to the farmers in order to fine out what the feeling of the community is regarding this vital matter. In coordination with the questionnaire idea, it was suggested by George Long that discussions should be started in all of the threshing rings.

After all of the questionnaires are in and if it is found that enough farmers are willing to co-operate, there will be another meeting with possibly demonstrations by fire equipment companies and determintion of what to purchase.

We Wish To Explain About Missunderstanding

Last week we printed an article about a fire at Orein Deaton's. We said "due to poor telephone service the call did not reach Mentone in time for them to be of much service." In this statement no reference was made to operator service. Dame rumor had it that the telephone was out of order and not working properly. Since this is part of what the subscribers are paying for, it is part of the service they are to get. If this situation was true in Mr. Deaton's case, he did not have good service. We understand the operator was very patient in her work and that it was through her efforts that the word did get through. If our article casted any reflection on the operator we hope that this article will correct it.

EVIL IN WAR DEBT SETTLEMENT

By JAMES HAMILTON LEWIS, Former Illinois Senator.

The International war debt settlement, commonly known as the Young plan, will endanger world peace and will create new enemies for America. The plan is subversive to the best American interests. I believe the plan of issuing bonds through an international bank to be sold to the United States as a method of settling the European war reparations debt will in effect take billions of dollars of American money and will mean the loss of all money paid by Americans for the bonds of the bankrupt nations.

I would suggest a plan whereby all war debts payments be suspended during the life of the generation that fought the World war on the provision that the allied nations suspend for the same length of time Germany's war debts. Future generations, who escaped the ravages of the war but who enjoy its profits, should pay the existing war debts. In this manner the war payments would be adjusted to serve the interest of the nations; not to serve only the international financier.

ARMY OFFICER'S DUTY AS CITIZEN

By JAMES W. GOOD, Secretary of War.

One of the greatest opportunities of the graduates of the United States Military academy for service is the voluntary observance of the laws of the state in which they live and of the nation whose laws they take oath to obey.

The regular army officer's tife is no longer confined to the performance of military duties, but the times are making many varied demands upon the officers. The government is using the army officer more at home and abroad as its representative and realizes he makes a tactful and capable agent.

In the performance of his varied tasks it is imperative that he establish bonds of common purpose with his fellow men in civil life. remembering that when we assume the soldier we do not lay aside the citizen. His first consideration must always be the national defense, but that does not preclude a rational participation in the life of the community and a sincere interest in its problems and projects.

The habit of observance of domestic law will breed respect for international obligations. Theirs is a profession which upholds and restores peace. Therefore no greater opportunity for service lies before them than the voluntary observance of the law.

Mexicans Thronging to Reopened Churches

Scene in Mexico City as the people were gladly thronging to the churches that have been reopened for services following the conclusion of a peace agreement between the government and the Roman Catholic church.

The danger in a little learning is in the little, not the learning.

It wouldn't seem half so hot if people with nothing to do would quit watching the thermometer.

China has so many buils in its political shop that it is a wonder that more crockery is not broken.

Another set of standards that we hope will spread far and wide is that of the hotel chefs' annual dinner.

Perhaps the man who best knows that it takes more than pull to make popularity is the extracting dentist.

The surprised public is learning that tactful and persuasive selling methods can be applied even to household coal.

The public speaker who knows when to stop is surpassed in merit only by the one who knows when not to begin.

Fame is generous. If a public character is forgotten in political affairs he may be revived in attention by a divorce,

Timely Fairy Story: "A little boy tried to put the postage stamp on the letter and got his hands all covered with mucilage." urade vocabularies are always fascinating, and we hear that professional chauffeurs always refer to that type of motorist- as a "Sunday driver."

A prevalent counterfeit \$100 bill has a single defect in the form of a missing comma. But the observant person supplies the omitted pause.

We seem to be in a period of transition: Kansas City reports a farmer who wears a wrist watch around the sleeve of his red flannel undershirt.

Along toward the middle of the average wild-animal movie, a large old lion in the foreground yawns heartily, making it unanimous,

The New York World complains that a nearby drug store does not carry blotters. In an emergency, though, a dry sandwich does quite well.

Another thing we always felt was wildly exaggerated was how much canned reindeer meat this country would consume within a very few years.

It is as well some of the modern slang was not the vogue in Colonial times. Imagine Patrick Henry getting up and shouting, "Give me liberty, or what have you?" Sallors, says an observer, no longer go in much for tattooing. We always said it must be awkward, hunting up new sweethearts with the same name as one's first love.

The granddaughter of the postmistress who read all the postal cards now listens in on the party wire. Times change; but the propensity to eavesdrop apparently doesn't.

Konssevitzky's plans to take the Boston Symphony orchestra abroad will give these foremost American musicians a good chance to visit the scenes of their childhood.

A Connecticut company is experimenting with the canning of dandelions. This is a corking idea, although not everyone can afford to set up a cannery on his lawn.

We are annually impressed with the number of people in this country when we find how many people are getting LL.D.'s, and see how many others there still are who have to worry along without them.

"Will you kindly explain what iodine does to us?"—Query to columnist. It smarts a little and so carries a reassurance about possible infection that relieves the mind as no painless application can.

Family Reunion .

The Nelson-Pentecost Twentieth Annual Reunion will be held at Rochester, Indiana at the Old Fair Grounds, Saturday August 10th, 1929.

Baptist Church Notes

The pastor has returned from his vacation and the regular service of the church will be resumed Sunday—9:30 a. m. Bible school, 10:45 a. m. Morning worship, 7:30 Evening service. Thursday —7:30 p. m., Mid-week service and monthly business meeting.

Misses Zeda Creviston, Mildred Bybee and Rosella Busenburg and Mr. Elmer Darr have returned from Franklin, Indiana where they have been representing the church at the Indiana Baptist Assembly and training school for young people. An enjoyable as well as a very profitable time was spent at this beautiful place.

Lesson for August 4

BELSHAZZAR'S FEAST

Temperance Lesson

LESSON TEXT-Daniel 5:1-31. GOLDEN TEXT-Be not drunk-with

wine, wherein is excess. PRIMARY TOPIC—What Wine Leads To.

JUNIOR TOPIC-What Drink Leads

INTERMEDIATE AND SENIOR TOP-IC-What Drink Leads To YOUNG PEOPLE AND ADULT TOP-

IC-Reveling and Ruin.

I. Beishazzar's Impious Feast (vv. 1-4). 1. The attendants (vv. 1, 2). Beishaz-

zar, his wife and concubines and a thousand of his lords.

2. Their behavior (vv. 8, 4).

(1) They drank wine; they engaged in revelry. (2) They committed sacrllege, drinking wine out of the sa cred vessels taken from the temple at Jerusalem. (3) They worshiped idols. gross of gold. silver, brass. Iron. wood and stone.

II. The Handwriting on the Wall (vv. 5-16).

1. The time of (v. 5). It occurred in the same hour in which they were en gaged in their drunken revelry.

2. The effect upon the king (v. 6). He was seized with consternation

8. The king's behavior (vv. 7-16)

(1) He called forth astrologers and soothsayers, offering rich rewards (vv. 7-Q). Their utter inability to interpret the writing left the king even more perplexed.

(2) Daniel brought in at the suggestion of the queen (vv. 10-16). The queen reminded the king of Daniel's service to Nebuchadnezzar. He was sent for and promised great reward iii. Daniel Interprets the Writing (vv. 17-28).

1. Daniel's address to the king (vv. 17-24.).

(1) He brushes uside the promised gifts (v 17). He would not have his speech limited by the king's gifts

(2) He reviewed before him the his tory of Nebuchadnezzar and applied the lesson to the behavior of Relshazzar (vv. 18-24), showing that Belshazzar should have profited by the experience of his futher.

2. The interpretation of the writing (vv. 25-28).

(1) "Mene" means "numbered" (v. 26). "God hath numbered thy kingdom and finished it."

(2) "Tekel" means "weighed" (v. 27). "Thou art weighed in the balances, and art found wanting." (3) "Peres" means "divided" (v. 28). "Thy kingdom is divided, and given to the Medes and Persians."

IV. The Judgment Executed (vv. 20-31). In that night was Belshazzan slain and Darius the Median took the king.

and Darius the Median took the king dom.

The Chaldean dynasty ended with Belshazzar. So we may interpret this whole scene as pointing to the conditions at the close of the times of the Gentiles, and as foreshadowing the prevailing conditions. Let us note: 1. The stupidity of men.

They, like people today, would not learn by example. Nebuchadnezzar's fate should have deterred Balshazzar from suct frivolity.

2. The magnificent splendor.

This great feast was characterized by pomp, display, parade. How characteristic of this age!

8. Luxury. The famous hanging gardens of Babylon were a noteworthy example. Signs of luxury today are on every hand.

4. The licentiousness of the king with his wives and concubines. Li centiousness is notoriously prevalent today.

5. Blasphemous sacrilege.

And may not the sacrilege of today be in excess of theirs, expressing itself in (1) a profession of religion for pecuniary gain, social and political preferment; (2) use of the pulpit and of the ministry for display and notoriety, even for the propagation of false doctrine; (3) union with the church, attendance on the communion, so as to cover up secret sins; (') the use of the Word of God to give point to a joke; (5) denying that the Bible is God's Word, making it a book of errors, myths and legends; (6) sneering at the virgin birth, repudiating Chirst's deity and setting aside His vicarious atonement.

6. Drunken carousals. The handwriting is on the wall. God will not endure this forever; His judgment shall fall. Conditions in the world indicate that the time is drawing near. Are you ready?

Nothing

And though I have the gift of prophecy, and understand all mysteries, and all knowledge; and though I have all faith, so that I could remove mountains, and have not charity, I am nothing.—I Cor. 13:2.

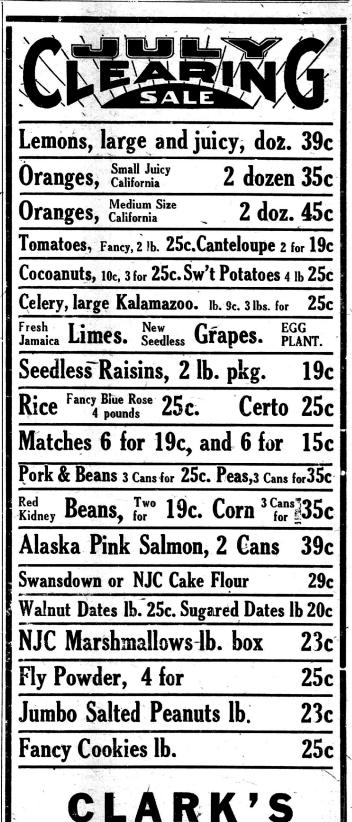

Always Thankful

The thoughtful are always thankful.

The Least Resistance A rut is the line of least resistance.

Humanity Set Apart

Every now and again N meet up with a "lonely" man or woman, who is such because, through some idlosyncrasy of creation, he or she is different from the common run of us. It is rather sad, because there appears to be no help for it. Such folks are like moths confined in a chest of cotton garments,—Porland Oregonian.

Card Of Thanks

We desire to express our thanks in a public way to the people of operation at Wabash Monday. this community and the Mentone Fire Department for their invaluable aid at the time of our recent a dinner party Sunday. fire.

A Real Furniture Sale

L. P. Jefferies has extended his special price sale on furniture to Saturday August 3rd. As their prices are always very reasonable, when he announces special prices you may look for some real bargains. If you are thinking of buying anything in the furniture line, it will pay you to take advantage of this sale.

Has Arm Amputated

We have word that the condition of Harold Homman is very serious. Two weeks ago he fell to the misfortune of having a compound fractureand the amputation his left arm. Last week his arm showed signs of blood poison so a second amputation was made, this time within two inches of his shoulder. Due to loss of blood and severe pain Harold its very weak and very little encouragement is given out by the physicans.

On Tuesday

In our last issue we were again compelled to leave out some news items of our correspondents-we assure you that we disliked very much to do this. One cause of this was that almost all of our correspondence reached us on Tuesday. This situation almost renders us helpless. If all of the news matter in town is sent to us as soon as it happens and if our correspondents send their items twice a week, we will have more time and will be able to take care of them very nicely. The small income of this paper does not warrant the employment of more Mr. and Mrs. Frank Sims and son help or the purchase of automatic and Marjorie Day of Indianapolis equipment, therefore, we must be were dinner guests Saturday even content to do the best we can in ing of Mr. and Mrs. Fred Busenthe you help us? Thanks.

MENTONE ITEMS

Roy Rush underwent a tonsil

Mr. and Mrs. Oliver Severns entertained a number of guests at

Chas. Jordon of Elkhart visited with his sister, Mrs. C. A. Fretz for a few days last week.

Mrs. Charles Darr is caring for her mother, Mrs. H. L. Tipton who has been quite ill for the past two weeks

Mr. and Mrs. Silas Meredith entertained last week, Mr. and Mrs. Con Welch of Long Beach, California.

Miss Ruth Aughinbaugh is in the Robert Long hospital for treatment. Her friends hope for a speedy recovery.

Mrs. Bud Cole and Mr. and Mrs. E. T. Whetstone enjoyed a picnic with their sons at Yellow Creek Lake last Thursday.

Mr. and Mrs. Elmer Maxwell and daughter of Frankfort Indiana called on Mr. and Mrs. Roy Maxwell last Sunday afternoon.

Mr. and Mrs. Fred Busenburg and daughters were entertained Monday evening at a fish fry at the summer cottage of Senator and Mrs. Arthur Robinson and daugh ter at Lake Manitou.

The Royal Neighbors met in a Farm News Office Is Paralyzed regular session Saturday night after which they were invited to the home of Mrs. Ella Wilson where the July committee entertained with a chicken supper. A splendid social time was enjoyed by all.

> The following men visited with S. A. Guy last Friday afternoon and incidentally enjoyed the hospitality of the social hour with the ladies, Joshua Garwood, L. P. Jefferies, Rev. Powers, Austin Blue, Russel Norris and William Cattell.

Senator and Mrs. Arthur Robinson and daughter Kathryn and time allotted to us. Will burg and daughters at their country home.

Mrs. Hardesty of Tippecanoe staved at the George Mollenhour home last week while her granddaughters attended the Girl Scout Camp at Yellow Creek Lake.

On last Saturday afternoon a party was given at the home of Clark Ernsberger for Mary Esther Smith. Those present were Pansy Squibb, Jean Burns, Mary Ellen Baker, Mary and Lola Mollenhour

W. F. M. S. Meet.ng

The Womans Foreign Missionary Society met at the beautiful country home of Mr. and Mrs. S. A. Guy last Friday afternoon. The meeting was a decided success in every particular.

The program was ably led by Mrs. Mary Goodwin and many in teresting facts were brought out in regard to the extension work of our society. Others on program were Mrs. W. F. Clark, Mrs. Bess Manwaring, and an excellent read ing by Mrs. E. Kinsey. Special music was furnished by Jean Manwaring and the Power girls was very much appreciated.

We were honored with the presence of Mrs. Russel Norris our local W. C. T. U. pres., who presented the work and its needs. Forty-six members and guests were in attendance. One new member, Mrs. Ed Kesler was added to our list.

Mrs. Guy is a charming hostess and with her assistants, Miss Elma Cattell and Mrs. Maxwell served ice cream and cake, ice tea candy and nuts.

This society is doing splendid work for Gods kingdom and deser ves the support of everyone interested in the work of the church.

SOMETHING TO TRY

While the fresh green apples are intheir prime of flavor make a few;

jars of: Apple Chutney.-Cover one pound of button onions with one cupful of water and eight ounces of salt Let stand two; days, renewing the water and salf once. Peel, core and slice one pound of green, sour apples. Soak

one pound of raisins, one pound of soft brown sugar, two ounces of fresh ginger, four ounces of chili peppers, one tablespoonful of crushed celery seed and a clove of garlic in a pint of vinegar for eight hours. Now add the onions and put through a meat chopper. Add another pint of vinegar and cook with the apples until they are soft Pack boiling hot in small. jars and seal.

Cucumber Sauce Uncooked .-- Peel and grate cucumbers and place in a cheesecloth bag to drain over night. Some leave the cucumbers unpeeled. Grate one-half dozen onions, add to the encumbers. In the morning add salt, cayenne pepper or a bit of finely; chopped chili pepper; add vinegar to; make the right consistency. Pack in; cold jars and seal

Celery and Shrimp Salad .- Dissolve two-thirds of a teaspoonful of gelatin in three tablespoonfuls of boiling water, add one-fourth teaspoonful of lemon juice. Add a tablespoonful of cold water to the gelatin to soften before adding the boiling water, When cool add one fourth of a cupful, of broken shrimps and one fourth cupful of finely cut tender celery, salt to taste. Mold and chill, serve with any good dressing.

Luncheon Salad .- Take one enve lope of gelatin, soften in one cupful: of cold water ten minutes and dissolve in one and one-half cupfuls of boiling water. Add one-half cupful of lemon juice, one-half cupful of sugar, three tart apples, one-half cupful of pecan meats and one cupful of celery. Mold.

Open Herabooks to Best Cattle

Dairy Associations Overlooking Means of Improving Their Breeds.

(Prepared by the United states Department of Agriculture.)

Dairy breed associations in the United States are overlooking an important means of improving their respective breeds in keeping their herd books closed to the many unregistered high-producing cows of excellent type, according to 0. E. Reed, chief of the bureau of dairy industry, United States Department of Agriculture.

Speaking before the annual convention of the Holstein-Frieslan association in Philadelphia, Mr. Reed suggested the desirability of the national breed associations giving "some study to setting up a system of registry which will permit entering in the herd books unregistered animals that have reached a high degree of purity for a high level of production."

Seems Like Rank Heresy.

Mr, Reed admitted this suggestion might seem like "rank heresy to those who have not thought the proposition through," but he called attention to the fact that all cattle now registered sprang from the common herd. Moreover, he cited figures showing the very slight difference existing between the production of unregistered and registered commercial herds-today. Of 100.000 cows tabulated by the

Of 100,000 cows tabulated by the bureau of dairy industry, 70,000 were grades and 30,000 were registered. The grades, he said, produced 7,124 pounds of milk and 254 pounds of butterfat a year on the average, while the registered cattle averaged 7,878 pounds of milk and 303 pounds of butterfat, a difference of only 754 pounds of milk and 19 pounds of butterfat in favor of the registered cattle.

New System is Favored.

There are many unregistered animals of great productive capacity and excellent type in the United States today that could be made use of in our breeding operations with profit, he said. A system of registering such animals has plenty of backing, and it can be made genetically sound. Great Britain, Holland. and other countries famous for their fine herds and flocks have used such a system in the past and still follow the practice of admitting animals that have three to five top crosses of registered sires. In discussing the plan. Mr. Reed pointed out that it would not mean an immediate wholesale registration of grade cattle. If only three top crosses were required for the registration of females and all first calves in the crosses were females, which is improbable, he stated, it would take ten years to get a female registered in the herd book.

The Secretary's View

- Some men are just funny little boys playing at the popular game of gogetting.—American Magazine.

Increases Marketable Sizes and Improves Color.

Good results followed the thinning of peaches in several demonstrations conducted last year in typical North Carolina home orchards.

"Thinning increased the percentage of fruit of better marketable sizes and was responsible for better color of the peaches, although the total yield per tree was reduced in our demonstrations last year," says E. B. Morrow, extension hortfculturist at the North Carolina State college. "With the Elberta varieties, however, the thinning did not pay because there was a heavy drop subsequent to the thinning."

As to the results to be obtained from thinning, Mr. Morrow gives a report of a demonstration in the orchard of J. A. Winfree of Anson county. On one tree, the fruit was thinned to six inches apart; on another to four inches and on a third, was left unthinned. The first tree produced 1% bushels of which 84 per cent would grade fancy for color. There were 273 peaches in each bushel. The second tree, where the fruit was thinned to four inches apart, produced two bushels in total yield with S0 per cent grading fancy for color and 309 peaches per bushel. On the third tree where the fruit was not thinned, 21/2 bushels were produced with only 50 per cent grading fancy in color. It took 415 of these peaches to make a bushel.

The results obtained in this and other demonstrations last year, indicate that thinning will pay in better quality of fruit but that for the Elberta variety, this work should be done, probably dater than is recommended for other varieties.

Spraying Fruit Trees Discussed by Nebraska

Barrel sprayers are generally more satisfactory for use in the farm orchard of 250 trees or less. A hose of 25 feet in length is probably adequate to reach all parts of the trees satisfactorily, according to specifications given in the new station circular 36, "Spraying Fruit Trees," which may be obtained free from the Nebraska College of Agriculture, Lincoln, Neb. Large power outfits, spray guns, dusters, and rods are discussed in detail giving the merits of each and the advisability of using them in doing the spraying job. Since it is absolutely essential to spray with the right material at exactly the proper time it is a good plan for every fruit raiser to

have the equipment ready for use when the pests appear, was the opinion expressed by C. C. Wiggins, of the horticulture department at the Nebraska College of Agriculture.

Cortland and McIntosh Fertilize Each Other

Cortland and McIntosh will fertilize each other. Whether other new seedlings of McIntosh will also cross-fertilize each other cannot be said until experimental proof determines the point. Barring one or two exceptions it is safe to assume that one variety of apple will fertilize another. The notable exception in Northern apple growing sections is the Baldwin apple, which is a poor pollenizer for anything. Red Astrachan, Oldenburg, Grimes and Delicious, on the other hand, are among the best for this purpose. Delicious blooms more nearly with Mc-Intosh than with Northern Spy.

Preventive Steps for Poults and Blackhead

Such tragic stories as come in about "poults the size of quails." "They get a yellowish or greenish color droppings"; "they begin to walk slow"; "they go light until they die." etc.

This is the old enemy "blackhead." The preventive measure is to rear the turkey poults on ground that is not pastured by chicks; to give them all the sour milk they will drink, and every third week to give epsom salts in the proportion of a tenspoon each per old bird, and a half tenspoon for poults.

The droppings of a flock affected with blackhead should be kept cleared away and burned or burled. Make sure that the fowls are free from mites and lice.

Do not keep as breeders birds that have been cured of blackhead.

Food for Goslings.

Bread and milk, cornmeal and brah mash are all good food for goslings One thing that tends toward profit in geese-raising is that but little food is required after the first few days when grass is plentiful But because goslings are not always careful as t diet they sometimes eat poisonous weeds principally young cockleburt. and unless timely aid is given the die. It is best to feed them at least once a day, and to include a little lard or grease skimmed from tiquor in which vegetables have been boiled and seasoned, to overcome the effects of such poisons.

Agricultural Notes

Hoeing is the life of peas. Give them plenty of it

Sudan grass used for pastures is not nearly so hard on the land as sudan grass used for how. One of the intest devices is a conveyor and self feeder for baling straw directly from the threshing machine.

Vegetables will not develop satisfactorily if the plants are thick, hence judicious thinning is very important.

Don't forget to take a daily lookout for bugs and give them a shot of poison. One bug can produce a big family in short order.

Early Cutting of Soy Beans Most Profitable

When soy hean hay is cut too early the yield is reduced but when cut too late it is hard to cure. The best time to cut soy bean hay is after the beans have become well formed, but before the beans have reached the stage known as half-grown.

With most forage crops the later you cut them the easier they are to cure. It is not so with soy beans because as soy beans mature the proportion of beans in the hay increases. Early cut soy bean hay is much more palatable to the stock than the late cut hay. Early cutting means reduced yield. The greatest yield is obtained at maturity when the leaves have begun to turn yellow.

Mechanical Corn Picker

Reduces Number of Men Under ordinary conditions, farmers can profitably own a mechanical corn picker if they plant and harvest 100 acres or more, yielding 50 bushels of

acres or more, yielding so busies of corn per acre, according to Prof. F. C. Fenton, Kansas State Agricultural college. The mechanical picker reduces the number of men required to harvest

and reduces the cost of harvesting in some instances to about half. Professor Fenton says. It also relieves the farmer of one of the most disagreeable and monotonous farm tasks.

Nests for Hens

Poultry specialists recommend one nest for every five birds. If there are sufficient nests, all hens are insured of a laying place and the eggs are more likely to be clean and of high quality. In the well-planned house, nests can be removed easily and conveniently for cleaning. Metal nests have an advantage in this respect because they are easter to keep sanitary and they harbor fewer mites and bed bugs.

Success With Hogs

The successful hog raiser has come to appreciate sunshine more and more. Modern hog house plans provide for admission of plenty of sunlight to the pens. Hogs require an abundance of fresh, pure air, which should be furnished without subjecting them to in jurious drafts. They suffer much in a close, confining, poorly ventilated place. Sunlight should sweep all parts of the floor each day, to destroy dis ease breeding organisms which may be present.
