WARSAW

The Community Farm News

THE COMMUNITY FARM NEWS.

This sheet will give you an idea of the size and character of a newspaper which we will begin publishing on June 25th.

It will be all that its name implies, striving to serve the needs of all the people and especially those on the farms. We have named it The Community Farm News for the reason that our people are all farmers or directly dependent upon the farmer, this being our main and only industry. Hence we want the people on the farm to consider this their local newspaper and not to be backward in informing us of any little news items which would be of interest to them or our readers. If all the people both in the village and the country will make a practice of sending us all the news items that come to notice, we can create a reader interest that will spell 'success' for the Farm News, and financial support is bound to follow.

During the next three weeks we will make a drive for subscriptions and yearly advertising contracts. We need at least four hundred bonafide paid up subscribers so that we may go before the postoffice department and obtain the second class mailing privilege—for without this it will cost us fifty-two cents per year for each subscriber for postage.

Heretofore it has been almost impossible to make home paper pay running expenses—now that condition has changed. We have built up a mail order job business that will take care of overhead expense item, and with any reasonable support on the part of the public we can make the paper pay and give you a real live community newspaper.

Yours for a newspaper

C. W. KRATHWOHL

Christian Spirit of Sharing, Solution of Problems That Confront World

By REV. PHILIP COOK, Episcopal Bishop of Delaware.

Christ is not a Karl Marx sitting in judgment upon an economic system, but the Son of God calling to men to live in the spirit of brotherhood. There is enough for all, if mankind knows how to share—food for all, money for all, blessings for all, faith for all, hope for all, love for all, when we know what spiritual brotherhood means and put it into practice. This is not Communism, nor Socialism, nor any of these things.

I am sorry for the man who has nothing to share with his neighbor but money. We must learn to share our enthusiasms, our faith, our sympathy in honest service. That is the heart of Christianity.

Christ's achievement in feeding the multitude was not a miracle over matter so much as it was a miracle over men, inasmuch as He induced those in the throng who were hoarding their food to share it with their neighbors. And that is Christian giving—not out of our superfluity, but of all we possess. That was what Christ was doing from the start to the finish of His ministry.

MENTONE ITEMS

Mr. and Mrs. Vernon Jones and sons Paul and Mervin and Miss Goldie Neidlinger spent Sunday afternoon with Mr. and Mrs. Ed Jones at Warsaw.

There Comes a Time

To most of us when we must decide one question: What funeral Director shall we employ? There are three things that should be considered;

- FIRST--EFFICIENT SERVICE.
- SECOND--QUALITY FURNISHINGS.
- THIRD--REASONABLE PRICES.

These three things form the foundation of our business, and always remember that the greatest service that can be rendered lies in the preparation of the body. So when in doubt, call

H. V. JOHNS,
Funeral Director.

Calls answered day or night.

Lady Attendant.

Phone 108, Mentone.

NOTICE

Stop! Look! Listen!

I have opened an

Auto Repair Shop
In the Dunlap Building on South Franklin Street
IN MENTONE.

A general line of Auto Repairing—Specializing in Starter and Generator Trouble. All kinds of second hand parts. A good line of Accessories, Gas, Oils and Greases. Soldering of all kinds. You will remember us as the mechanic formerly employed at the Motor Inn Garrage.

GIVE US A TRIAL.

Our Motto:—"Honesty and Service."

Clifford L. Sult.

THANK THEM—NOT US.

If there is any praise or thanks due any one for this special issue and the fact that this community is to have a newspaper, they are due to Kenneth Riner and George Clark. It is through their efforts, hard work and much time spent on the project that has made this venture possible. On the other hand, if you have any cussing to do come to us, we have been in the paper game a good many years and have become accustomed to kicks and cussings.

However we feel that our thanks are due these two gentlemen for help they have rendered us in getting out this sample issue, and if they can just spread some of their enthusiasm over the balance of the populace. The Community Farm News will be a success in every respect.

OUR BAND CONCERTS.

With the engagement of the Rochester band for our weekly Saturday evening concerts we are assured of music that cannot help but please the people. This organization was one of the few state bands chosen to furnish the music at the automobile races at Indianapolis on Decoration Day, which in itself shows that they are a real band.

Mentone merchants extend to all a cordial invitation to attend these concerts. There will be plenty of parking space with courteous officials who will assist and direct you to the best point available—so come to Mentone every Saturday night during these concerts—and when the last concert of the season is given we believe you will like our town and merchants so well that you will continue the weekly visits.

THE EGG CAR.

The Mentone Egg Producers are gaining a reputation all over the country. Several days ago we received a letter from a party in Ohio asking for information as to how the business was handled etc. The formation of this organization was one of the best

moves that our business men ever made. Besides being a great advertisement for the community as an egg producing center, it has brought thousands of extra dollars into the pockets of the poultrymen who ship in Mentone cars. The cause of the great success of the association is due to the management and loyal co-operation of the shippers in the Mentone car. Mentone Egg Producers have established a good reputation on the New York market, and the dealers always pay top prices for Mentone eggs.

FAMILY REUNION

The Brant family reunion will be held at Beachwood Park, north west of Atwood, Indiana, on the bank of Huffman Lake, Sunday, June 9th. They expect a good attendance at this reunion.

AROUND THE WORLD.

Mirvin Jones went to South Bend, Tuesday of last week, where he joined Dr. and Mrs. Miller of Texas, who are making a trip around the world by motor and steamship. We understand that Mirvin will act as their chauffeur during the entire trip. This will make a fine trip for Jones—all the sight seeing, good eats and pay besides, is sure some job.

REUNION CARDS.

As the season of the year for family reunions is at hand we wish to state that we will print the usual form on post cards—customer to furnish cards—at the following prices: One hundred or less, \$1.25; not over 200, \$1.50. We would suggest that you place your order so as to give us several days time. Country Print Shop Mentone.

Forbidden Terms

Among the expressions and words which William Cullen Bryant forbade being used in his newspaper were the following: Artiste, authoress, bogus, casket (for coffin), debut, decease (as a verb), donate, employee, graduate (for is graduated), gents, humbug, in our midst, jeopardize, loafer, oration pants (for pantaloons), poetess, Rev. (for the Rev.), role, rowdies, state (for say), via and would seem.

Be strong!
Say not, "The days are evil. Who's to blame?"
And fold the hands and acquiesce—oh, shame!
Stand up, speak out and bravely, in God's name.
—M. D. Babcock.

COOLING DISHES

During the summer weather desserts should be light, easy of digestion, as well as simple to prepare.

Creme Orient.—Take a package of lemon gelatin, dissolve in a cupful of boiling water and a cupful of pineapple juice. Let stand until thick but not set; whip with an egg beater until frothy, add one-fourth cupful of diced pineapple and the same of diced preserved ginger and one cupful of cream, whipped. Pile into a mold and chill.

Frozen Tomato Salad.—Dissolve a package of lemon gelatin, add one cupful of boiling tomato juice, one and one-half teaspoonfuls of salt, a few dashes of paprika, one teaspoonful of onion juice and one-eighth of a teaspoonful of cloves. Add three more cupfuls of tomato juice and two tablespoonfuls of lemon juice and place in a freezer. Freeze for ten minutes, then place in molds; pack in ice and salt for a half hour. Serve in lettuce or water cress.

Fruit Punch.—Pour a pint of water over two tablespoonfuls of black tea. Let it steep five minutes. Boil two cupfuls of water and one cupful of sugar five minutes, add the juice of three lemons and two oranges and a pint of strawberries cut into halves. Serve with cracked ice.

Canton Ginger Sandwich.—Thin cream cheese with cream and mix with an ounce or two of minced Canton ginger, two ounces of blanched and chopped almonds, one teaspoonful of lemon juice, salt and paprika to taste. Serve the sandwiches garnished with water cress.

Ice Box Pie.—Soak a tablespoonful of gelatin in one-fourth cupful of cold water for five minutes, add one pint of any berry juice or other fruit juice boiling hot, a pinch of salt. When almost set add any berries or fruit and pour into a baked pastry shell. When firm, cover with whipped cream and serve. Be sure that the mixture is very thick before putting into the shell.

Nellie Maxwell

Infant Locomotion

There seems to be no record of the use of baby carriages in this country before the middle of the Nineteenth century.

MENTONE ITEMS.

Mr. and Mrs. Clark Ernsberger spent a few days at Cleveland, last week with Miss Bernice Ernsberger.

Kenneth Mollenhour of Fort Wayne spent a few days with his parents, Mr. and Mrs. Miner Mollenhour.

Mr. and Mrs. Earl Smith and son Wilbur formerly of Mentone, are now located for the present at Greeley, Colorado.

Mrs. Pearl Blue and granddaughter Elene, who is working at the James Blue home, spent Sunday at the Ed Halterman home.

Mr. and Mrs. Charles Blue and daughter and Mrs. Blue's mother Mrs. White of Chicago spent Thursday with Mr. and Mrs. Allen Blue.

TALMA ITEMS

It was our intention to have the Talma community represented in this issue, but we were so rushed with work that we did not find time to look up a good scribe. We will try and have this neighborhood represented in our next issue.

We Want Correspondents

We want a good live news gather in every surrounding neighborhood, so if your locality is not represented and you feel that you can fill the bill, write us and we will gladly send you supplies and furnish you free subscription to the Farm News.

FIRST SUBSCRIBER

Allen Blue has the record of being the first citizen to place his name upon our subscription list. It required no solicitation on our part to get him, as he realized that the community really needed a newspaper.

DECORATION DAY

Memorial Day was duly observed at this place with the usual exercises and decoration of the soldiers graves. However the absence of either a band or drum corps was very noticeable.

Ray Alderfer who is employed in Kalamazoo, Michigan spent over Sunday with friends and relative in Mentone and Talma.

GOLDEN WEDDING

(Contributed)

There are many pleasant things even in the midst of the clash and hurry of the eager world for gain. Home and home life need to be cherished and the individual responsible for the successful promotion of a home should merit a token of reward.

For such a cause Mr. and Mrs. Franklin W. Laird were honored at their home in Mentone. The mile post of life to be observed, the 25th of May 1879 is an eventful date to Mr. and Mrs. Laird.

The single yet sacred ceremony of that date has been preserved. The 25th of May 1929 marked the fiftieth anniversary of the marriage. Thus they earned the coveted experience of celebrating their Golden Wedding. Before the wedding services, Bro. J. S. Johns made a few appropriate remarks. Twenty four guests including members of the immediate family and friends enjoyed a joyous feast. In the afternoon about seventy five relatives and friends came to offer their congratulations to the bride and groom. Mr. and Mrs. Laird sincerely appreciated all that was done in their honor.

Phoenix Insurance Co., visited
his mother, Mrs. C. Holton and
his sister Mrs. C. Krathwohl.

Railroad Lands

Different railroads received differ-
ent amounts of land in the grants of
their charters. Generally the odd-
numbered sections were given them
within a certain distance of the rail-
road. The distance was usually from
20 to 40 miles, but in one case it was
only for a distance of six miles and in
another for 12 miles.

Fact Puzzles Scientists

The greatest finds of fossil ivory
have been made in islands to the
north of Siberia, and it has long been
a puzzle to men of science to under-
stand how such herds of monstrous
creatures could have found a living
so near the North pole.

Modern Smithy

The village smith still stands under
the spreading chestnut tree but now
he invites tourists to stop and buy his
gasoline, oil, sandwiches, curios and
postcards. — Nashville Banner.

BAPTIST CHURCH

A Special Offer.

For Subscribers in Fulton, Marshall and Kosciusko Counties Only

Owing to the fact that we must have a large list of paid up subscribers to the Community Farm News immediately we will accept one dollar for one years subscription if placed before June 26, after that date for subscribers living in Fulton, Marshall or Kosciusko counties the price will be \$1.50 per year in advance, and outside of the above named counties it will be \$2.50.

It is going to take some hustling to get a list large enough to comply with the postal rules in making second class entry, and it is up to all persons who wish the Farm News to succeed to see that their name as well as names of all friends be on our subscription list by June 26.

Miss Helen Wiley of Bourbon is spending a few days with Rev. Squibb and family.

Mr. and Mrs. Irvin Snyder and Gaylord Emmons spent Sunday afternoon in South Bend.

Jack VanGilder is spending this week with his uncle, S. O. Stookey and wife of near Leesburg.

Mr. and Mrs. Charles Hammer and family spent Friday evening with Mr. and Mrs. George Lyon.

Mr. and Mrs. J. N. O'Neil of Oak Park, Ill., are visiting their parents, Mr. and Mrs. C. W. Krathwohl.

Mr. and Mrs. Mahlon Mentzer and Allen Blue spent Sunday at Lagro visiting Dr. Frank Bloomer and wife.

Mr. and Mrs. Seth Flenar and children and Mr. and Mrs. Wesley Flenar spent Sunday in Elkhart visiting relatives.

Miss Scenora Lyons who is employed at Nappanee spent over Sunday with her parents, Mr. and Mrs. Frank Lyons.

C. W. Shafer is visiting his mother and brother, at Morocco and Lafayette for a few days. He also attended the Masonic Grand Lodge at Indianapolis.

Failure of Humanity to Find Real Happiness, Indictment of Christianity

By REV. DR. HENRY DARLINGTON (New York), Episcopal.

IF THOMAS A. EDISON'S birthday statement that he did not know any one who was really happy is a correct quotation, and if Mr Edison is only partially right, what a judgment on 2,000 years of Christianity! One of the great things that Jesus sought to give us was happiness, joy and peace. And yet how few of us are realizing that God meant us to get the most out of life.

This we are failing to do, I believe, because of four joy-killers that loom all too large in the average person's mind, the product of over-emphasis on material values. First among these joy-killers we may place the Puritanical ideas and distorted sense of sin that too frequently make people feel that to enjoy themselves would in itself be wrong. They think that anything that is pleasing must be bad.

Worry is the second of life's great joy-killers—worry over things not worth considering. Jesus preached against worry. In one of the modern translations we find Him saying, "Don't let these fear-thoughts get the better of you."

Our third joy-killer is the ceaseless urge of this age which seems to be prodding us on and on. Here in America we seem to think that unless a man is working his finger nails off, there is something wrong with him. We seem unable to relax, to sit content on a beach and listen to the music of the waves.

Jealousy, bringing us all sorts of unnecessary temptations, is the fourth joy-killer.

Misunderstanding of Jewish Ideals Largely Responsible for Prejudice

By RABBI STEPHEN S. WISE.

THE world's prejudice toward the Jew is due to a misunderstanding of his aims, ideals and racial inter-relation. What is the matter with us? What is the matter with those who persecute us, who, in a thousand ways, have afflicted and troubled us? Almost anything may be explained but not everything may be vindicated or justified. I could sum up the whole crux of the opposition to Semitism in one word. That word is "alienism," not as it is generally understood in the sense of newcomers who are alien immigrants, but in the sense that the word really means and in the sense that it is applied to Jews. We are different and therefore misunderstood.

The Jews are the great creditor nation of the world. Dislike for its creditors, too, explains the attitude of the world toward us, Rumania and other countries as well. Whether we are really different seems to be less the method of reasoning than the fact that we are believed to be different.

The Christian world doesn't know the truth about us, and, as a result, we have for centuries been the most misunderstood race on the face of the earth. Except for the few centuries when we had a king, a country and a national life of our own, we have been forced to go everywhere throughout the world in order to exist.

Some of us are rich and for many it would be a better thing if they were not. We have seen the effects of accumulation in the record of the past and if there be another century of accumulation by our people, then woe betide the Jews.

I do not think that there are many deliberate, conscious anti-Semites but there are many who do not understand us. We are a phenomenon and the world does not want to deal with a phenomenon.

FARM POULTRY

CLEAN GROUND IS
BEST FOR RANGES

One of Most Important Points
in Growing Pullets.

Clean ground for ranging is one of the most important points in the growing of healthy pullets which will become vigorous and profitable layers. It is pointed out by the poultry husbandry department of the Ohio State university.

"A large percentage of the mortality in the growing flock, as well as in the matured laying flock, is caused either directly or indirectly by intestinal parasites," P. B. Zumbro, poultry specialist, says in a recent extension service publication. "These parasites, as well as many disease germs, are carried over from year to year in the soil."

Zumbro urges that chick ranges be on land on which no other chicks have been raised or old hens ranged for at least two years. Alfalfa, he says, makes one of the best chick ranges. Clover is almost as good, and blue grass comes next.

"Many poultry men think an alfalfa or clover field is too valuable for rearing chicks. This is a mistake. Poultry grown on good range will give a return equal to that from any live stock, or better. Good results can be obtained by having two or more ranges, and a crop can be grown in the meantime. This method will provide clean range and will enable the owner to have the brooder house near the farmhouse, saving time in going to and from the house. When this method is used, one acre of land should be provided for each 500 chicks."

Wonderful Feats With

Turkeys Are Reported

Really wonderful results with turkeys are reported from the Ontario government turkey farm in Norfolk county. Years ago this province used to raise turkeys by the thousands but disease got in and flocks have been diminishing to such an extent that each year thousands of birds are brought in from the West. The disease puzzled people and except where there was unlimited range the raising of turkeys languished. Even in the places where there was plenty of range, such as in the rocky districts on the edge of forest lands, difficulties in the shape of foxes and wolves were encountered. It looked for a while as if there would be practically no turkeys raised in Ontario. But Prof. W. R. Graham took hold of the thing and he soon found out that the

disease came from the ground and the germs were so hardy that they could live over in the coldest weather. He adopted the plan of feeding everything in troughs and moving these troughs each day and his results have been unusually successful. Losses have been light on the experimental turkey farm and some excellent birds raised.

* Poultry Notes *

It pays to worm the poultry.

It requires 21 days to hatch hen eggs.

Care must be taken that chicks do not crowd in corners and smother.

Shut the sheep in at night, allowing them to bed in the corral or shed.

Coccidiosis usually occurs in young chicks from two to six weeks of age.

When the poulters are about eight weeks old, they can be removed to the rearing ground.

Tapeworms have been named as the cause of death of 50 per cent of the chickens in some flocks.

Changing breeds every year has never yet been found a safe foundation for a profitable poultry business.

A month lost in growing out pullets means the loss of a month's production next fall when eggs are a good price.

Any variety of wheat is good for poultry. In fact, small undeveloped shriveled wheat if dry is even better than the fully developed kernel.

The farmer who produces eggs of uniform color, weighing an average of 23 ounces per dozen, and which are held in a cool cellar, can ship to eastern markets by express to advantage.

The profit from the farm flock depends to a large extent on the number of eggs the hens lay.

Provide Natural Shade
for All Young Poultry

An ideal range will provide natural shade where the young birds may find protection from the hot summer sun. Many poultry flocks do not have this natural protection, say poultry specialists of the Pennsylvania State college, so some means of protection must be provided. Moving the colony houses near a cornfield makes ideal range conditions. Sunflowers planted around the colony house also will provide satisfactory shade. If the colony houses cannot be moved near a cornfield and sunflowers are not used, some form of artificial shade should be provided. Old feed bags placed on a frame about two or three feet above the ground will give the needed protection.

TIPPECANOE ITEMS

Mr. and Mrs. Homer Blue spent Sunday afternoon at Palestine.

John Creighbaum of Tippecanoe passed away last Sunday, after a long illness.

Several of the farmers finished planting corn last week in this community.

Mr. and Mrs. Glen Snyder spent Sunday evening at the Clyde Ward home.

Mrs. Kennedy and daughter of Hammond are visiting friends in Tippecanoe for a few days.

Roy Mollenhour and family of Elkhart spent Sunday with Mr. and Mrs. Fred Swick and family.

Mr. and Mrs. Emanuel Kinsey went to Mt. Pleasant Sunday to spend the day with relatives and friends.

Mr. and Mrs. Ford Meredith and family and Miss Thelma Horn spent a few days at the Granville Horn home.

Mr. and Mrs. Henry Meredith of Elkhart spent Sunday with Mrs. John Morical and Mr. and Mrs. Hiram Horn.

Mr. and Mrs. Clarence McShirey called to see Mrs. Forrest Kesler Sunday. Mrs. Kesler is suffering from the effects of the flu.

Mr. and Mrs. Clinton Elexander and Mrs. Howard Repkey and son Jack of South Bend took supper Saturday evening with Mr. and Mrs. Homer Blue.

Mr. Stern from New York who is a large Egg Buyer has been in this vicinity for several days and calling on his patrons.

Mrs. Russel Norris took seriously ill last Friday, but is reported a little better at this writing. Her sisters from Bourbon are caring for her.

Dr. Huffman of Rochester was out and lifted the quarantine from the Lawrence Boganwright home week ago Friday, after having them in six weeks.

Mr. and Mrs. William Vernett and grand-daughter Etta May and Ethel Snyder were in Warsaw Saturday evening and visited the green house there.

Steve Barrett who was hurt last winter when the wind blew a tree over on him and hurt him so severely as to confine him to his bed for several weeks is able to drive his car and be out on crutches.

Mr. and Mrs. Jesse Moriarty and son Donald and daughter, Mrs. Kennedy all of Hammond spent Decoration Day with Mrs. Moriarty's sisters, Mrs. William Vernett and Mrs. Purl Stookey.

The Decoration services were held at the Tip Town cemetery Sunday. Mr. Weaver of Tippecanoe gave the address, the music was furnished by the Argos Band. There was a large crowd at the services. Several new stones have been put up lately.

MENTONE ITEMS.

Tella Meredith who has been sick for the past several months remains about the same.

Mrs. W. F. Clark called on Mr. and Mrs. Alphas Guy at the Methodist hospital at Indianapolis, where they are taking treatments. They are getting along very satisfactorily.

C. E. Walburn recently purchased the Insurance Agency owned by J. O. Harris and Allen Blue. Mr. Walburn is well known and well thought of in and around Mentone. His insurance office is located above the Farmers State Bank and is prepared to give to the people of this community a real service in all kinds of Insurance.

INFERTILE EGGS BEST PRESERVED

Only Fresh, Clean and Sound
Should Be Used.

Only those eggs that are fresh, clean and sound of shell should be preserved or "put down" for use next winter. One spoiled egg will, in many cases, cause the entire lot to spoil.

"To be absolutely sure that the eggs are fresh and the shells sound, they should be candled," says A. G. Oliver, extension poultry man at the North Carolina State college. "An old shoe box may be used for this purpose by cutting holes in it to fit the egg and fitting it over a lamp or an electric bulb.

"This test will show up any porous, or cracked shells and will also show if germination has started. This is a safety-first precaution and, as it takes only a few minutes time, should be practiced by every housewife before putting down any eggs."

For best results infertile eggs should be used but fertile eggs can be used with good results if they are put down each day. If this is done, the danger of germination will be eliminated. Never wash the egg before preserving as this removes the natural protective coating on the shell.

In preparing the solution, Mr. Oliver advises one quart of water glass to nine quarts of pure water. The water should be boiled and cooled before mixing with the water glass.

For containers, a clean stone jar is the best but tin or wood vessels may be used. A six-gallon jar will hold about fifteen dozen eggs.

Mr. Oliver states that the eggs at the top of the container should be covered by at least one and one-half inches of the solution. It is not necessary to fill the jar at one time as fresh eggs can be added each day, taking care, however, that the eggs on top are always covered with the solution.

The containers should be kept covered to prevent evaporation and should be stored in a cool place until needed.

Give Good Ventilation During Summer Months

Plenty of ventilation should be provided for brooder houses during the hot summer months, advises John Vandervort, extension poultry specialist of the Pennsylvania State college. Ventilators at the rear of the chicken house and windows at the front and on the sides should be kept open to

allow free circulation of air, Mr. Vandervort says. Results of poultry demonstrations among college flocks prove that pullets reared in hot, stuffy houses are likely to be stunted and unprofitable.

Frequent cleaning of the house in the summer is necessary also to prevent flies from breeding and to keep the air in the building pure. Course wire netting placed around the roosts will keep the pullets from the manure, one means of helping to prevent tapeworm infestation.

Poultry Facts

Give the hens plenty of water.

Pullets are not so easily culled as hens.

Home-grown feeds are the best for turkeys.

Ducklings can be brooded much like chicks.

It is always a problem to have the duck eggs clean.

Milk, cod-liver oil, corn products, and leafy green food make chickens grow.

Gather eggs regularly, twice each day, during excessively warm or excessively cold weather.

Turkey hens will lay in places prepared for them. Boxes or barrels placed suitably will do very well.

As the poults grow older and the season advances the heat can be gradually reduced until they require little heat.

In order to make the greatest profit on chicks, it is necessary to raise as large a percentage of the chicks hatched as possible. In order to do this they must be kept warm and healthy.

Baby chicks of a reliable hatchery is a sound investment.

Poults, like young chicks, should be raised on a fresh range—one which has not been frequented by turkeys or chickens the year previous.

To make a complete job of diversification every farm should have besides chickens, turkeys, ducks, geese and guineas. But the same rule applies to all when it comes to the kind; there is no profit to be derived from mongrels.

Hens cannot lay eggs without protein. Skim milk is one of the best forms of protein for use with all classes of poultry.

Mongrel geese plucked regularly yield one pound of feathers a year. Pure-bred geese yield twice as many and, besides the good prices of feathers obtained, the goose is worth as much as it ever was.

JOIN THE FARMERS'

Stop-Thief Association

And benefit by the Liberal Rewards offered for the capture and conviction of thieves who have been operating in this community.

This organization is made up of farmers and poultrymen, who have created a fund sufficient to offer a liberal reward for the apprehension of thieves.

A membership fee of \$5.00 is being charged, thereby creating the reward fund. This entitles one to membership indefinitely, as no assessments or additional charges will be made until the reward fund is depleted sufficiently to justify it.

This organization has been assured of the co-operation and support of the County Sheriff, which adds much to its influence. If you are interested talk with some member or attend one of the meetings which are held at regular intervals.

Join now and get a metal sign to post in front of your house. Members only are protected. Members of this association have not suffered a loss since it was organized.

K. A. RINER, Secretary, Mentone, Indiana.

LIVE STOCK NEWS

JAPANESE MILLET IMPERFECT FEED

Experiments Show It to Be Inferior to Timothy.

Hay made from Japanese or barnyard millet, sometimes called Billion Dollar grass, is regarded as inferior to timothy hay as a food for sheep. While few data of an experimental nature are available showing the value of this roughage for sheep, the above statement as to its merits in comparison with timothy, and a general discussion of timothy hay as a roughage for sheep will permit of some deductions, says D. S. Bell of the Ohio experiment station.

In practically all experiments which have been conducted timothy hay has been found a very inferior roughage for sheep feeding. At the college of agriculture, University of Alberta, Alberta, Canada, ewes fed timothy hay yearned lambs one-half of which died before they reached the age of twenty-eight days. Not only was the loss of nursing lambs heavy but the ewes lost 27.3 pounds each in weight during gestation. This lot of ewes was compared with another lot of similar ewes fed alfalfa hay. This alfalfa-fed lot raised all of the lambs veaned, and the ewes were thrifty and vigorous.

In Bulletin 120 of the Missouri Agricultural Experiment station is found this statement concerning timothy hay as a roughage for pregnant and nursing ewes: "Timothy hay proved to be such an inferior ration that it was not continued the second year." The data presented show that the ewes fed timothy hay and grain yearned 17 lambs, five of which were weak at birth, and one born dead. The ewes lost an average of 7.67 pounds during the trial. Ewes fed clover hay and grain yearned 16 lambs all of which were alive and strong at birth, and these clover-hay-fed ewes gained 6.53 pounds each during the test.

With Japanese millet ranking inferior to timothy hay as a roughage and with timothy giving such poor results little can be said in favor of the millet in question. The sheep raiser who is striving for efficiency and economy of production will do well not to use such hay for his ewe flock. If it seems desirable to grow millet for hay, one of the foxtail groups—German, Hungarian, or common—would be more desirable, and even these are not meritorious to any extent.

Prevent Cattle Losses on Sweet Clover Hay

The right precautions will prevent a good share of the loss of cattle on sweet clover hay or pasture. Moldy hay may contain poisons that will

kill stock. Sweet clover hay seems to thin the blood of the animals and cause it to lose its clotting characteristic. Some other kind of hay should be fed with clover hay, or the animals should be changed to another kind of roughage after two weeks on sweet clover hay.

Bloat is caused by the rapid decomposition of the high percentage of organic matter in green feed. Bloat on sweet clover pasture may be largely prevented by starting the animals on some other green pasture and then getting them used to the clover slowly. In serious cases, the pressure may be relieved with a trocar. Every farmer who pastures clover of any kind should have one or more trocars on the place for emergency use.—University of Nebraska.

Heifer Calves Finish Quicker Than Steers

Cattle feeders who are feeding steer calves and heifer calves together will observe that the heifer calves seem to finish out quicker than the steer calves. This is not due to the heifer calves making more rapid gains, but rather that they are somewhat smoother in conformation, and tend to put on surface fat sooner than the steer calves. The feeder who has a number of calves on feed should ship the heifer calves as soon as they show enough finish to sell well on the market.

Best Veal Calves

No better veal calves can be produced than those that come from the disease free herds of Wisconsin Holsteins, Brown Swiss, Shorthorns and Ayrshires. For those who prefer the lighter weights there are the smooth finished Guernseys and Jerseys. Veal has taken its place as a year round food and the Wisconsin farmers feel that their calves should sell on the same grade basis that are accorded other live stock.

Before Sow Farrows

A day or so before each sow farrows she should be washed with warm water and a good laundry soap. After washing, the belly and udders should be rubbed with lard to keep the skin from cracking and becoming sore. She should then be put into a properly cleaned pen and left there until the pigs are farrowed. Clean straw, and not old litter scraped up around the pens, should be used for bedding.

Water for Ewes

Ewes with twins, getting a little extra grain food, drink a good deal more than ewes with single lambs getting no grain. The excessive call on the ewe by their lambs causes all the more drouth on the system, and thence more thirst, naturally because there is not so much sap in that dietary as there is in green feed. Indeed, when the lambs get strong, they begin to drink even before they are weaned, if milk runs short and the herbage is dry through a spell of dry weather.

POTATOES RIGHT FOR LIVE STOCK

Rations Are Generally Comparable to Corn Silage.

Potatoes make a good succulent feed for all classes of live stock when fed as a part of the ration, declares E. J. Maynard, associate animal husbandman for the Colorado Agricultural college experiment station in a new bulletin just issued on "Potatoes For Live Stock."

Copies of this bulletin may be obtained free of charge by writing the extension service of the college.

Subjects discussed in the booklet include preparation for feeding, potatoes for ensilage, potatoes and potato silage for sheep, potatoes for dairy cows, swine and horses.

The bulletin is summarized as follows:

Potatoes fed in live stock rations are generally comparable to good corn silage.

Potatoes may be fed raw to cattle, sheep, horses and swine, but are best cooked for swine. Raw potatoes have only 2.3 the value of cooked potatoes fed to pigs. Raw potatoes proved to be as good as cooked potatoes fed to dairy cows.

Raw potatoes may safely constitute one-half the dry matter in rations for cattle and sheep and one-fourth the dry matter in rations for horses. Cooked or raw potatoes should not replace more than one-half the grain allowance in fattening pigs.

Raw potatoes fed to dairy cows at the rate of from 25 to 35 pounds daily have actually increased milk production, but larger amounts will taint the milk, cause a salty butter and may cause indigestion and bloating.

The dry matter in potatoes is composed largely of starch, a carbohydrate valuable in both fattening and milk-producing operations.

Potatoes are low in protein or growth-producing material and some protein concentrate or roughage should be fed with them.

Raw potatoes are best fed sliced through a root cutter. Frozen, rotted, or decayed potatoes may cause trouble if fed to live stock.

Raw potatoes have an acrid taste and tend to increase the flow of digestive juices. They should not be fed with other feeds that tend to irritate the digestive system and they should always be fed with caution.

Hogging Down Corn

Hogging down corn is a satisfactory plan to follow in fattening hogs for market provided conditions are satisfactory for this practice. However, if there is much rainy weather during the period the hogs are running in the corn field, it is very likely that more corn will be required to produce 100 pounds of gain because some corn will be wasted in the mud. Tankage or other protein supplement will be required for the most economical pork gains.

Efficiency Is Key to Beef Feeder's Profit

Efficiency in feeding methods—not a wide margin between the prices paid for feeder cattle and the prices obtained for them on the market—are likely to determine the profit of the beef cattle feeder for the next few years, in the opinion of C. R. Arnold of the rural economics department of the Ohio State university.

However, Arnold believes the beef cattle outlook is at present favorable for the man who produces feeder cattle. It is also favorable for the man who can purchase calves and carry them through a large portion of their growing period, and then feed them out, providing he has an abundance of cheap pasture.

The market outlook for fat cattle does not appear favorable for the next three months, but may strengthen in the late summer, Arnold concludes after a study of figures on receipts of cattle thus far this year, and on the number of cattle now on farms in this and other states.

Best Hog Pasture

Some farmers are short of suitable land or believe that they cannot afford to use good crop land for hog pasture. Anyone who has efficiently used pasture and kept close check on the financial end of his business would testify that the average acre of farm land devoted to hog pasture will yield a return far in excess of that secured from crops of wheat, oats, corn, or hay. Where failures have been noted in the use of pasture, the evident cause was that of an attempt to make some rocky, barren, out-of-the-way piece of land grow the crop.

Live Stock Facts

Remove the ram from the flock as soon as the breeding season is over.

Ton litter methods grow hogs for market when prices of pork are most profitable.

Hogs should sell on profitable levels all through this year, judging from the supplies available.

Good hog men put in all the time possible with their herds, and often are able to nail what might be future trouble right at the outset.

Buttermilk or skim milk cannot very well be compared to barley because barley is a dry feed containing only about 10 per cent moisture while buttermilk and skim milk contain about 90 per cent of moisture.

Young pigs prefer their barley and oats ground. Usually there is nothing to gain by grinding corn.

Buttermilk that is free from dilution with wash water from the churns is practically equal pound for pound to skim milk for feeding to hogs.

POULTRY

TURKEYS RAISED IN CONFINEMENT

Better Results Secured Than Where Poults Are Free.

In times past many people felt that turkeys could not be raised in confinement but that they should have a large area over which to range. This contention has changed now, however, and in several localities turkeys have been raised in confinement with a great deal of success.

The Minnesota and Nebraska experiment stations have been among the leaders in investigational work in turkey production, in recent years, with some such work being done at other experiment stations in various parts of the country. At both of the stations mentioned it was found that better results could be secured if the poults were raised in confinement than if they were allowed to range over a large area, the method once followed in turkey production. In view of these findings, those who wish to go into turkey production, either on a small or large scale, are no doubt interested in the practices to be adhered to in this method of turkey raising.

The United States Department of Agriculture has found that turkey production has declined consistently since 1890, in the face of an increase in the production of all other lines of poultry and live stock. This decrease in production cannot be attributed to a decrease in demand, for the demand has always exceeded the production, or at least, there has never been a surplus of turkeys on the market with which to contend.

This decline in turkey production can be explained almost altogether by the fact that farmers have always felt that turkeys should have unlimited range. Because of following this method of production the turkeys came in contact with the chicken yards, to the detriment of the turkey business. The disease problem among turkeys which come in contact with chickens is great enough that it has tended to cut down on production among farmers and farmers' wives who have, in the past, raised turkeys and chickens together on the same range.

In the Nebraska investigations it was found that the old method of raising the turkeys on the open range with natural hatching and brooding by turkey hens was not successful. On the other hand, artificial brooding and hatching, by means of which feed and environment could be kept under the control of the producer, was found to yield very good results.

Electric Brooders Are Clean and Convenient

The New York experiment station found electric brooders very satisfactory except in extremely cold weather, when this type of heat did not warm up the space in the house away from the brooder. Like electric incubators, brooders heated by electricity are clean, easy to regulate and very convenient.

Individual farm light plants extend the advantages of this electrical equipment to farms which are not located on an electric "high line." Because many farm plants are equipped with both generator and battery power, the supply of current for the incubator or brooder is constant and reliable.

Aylesbury Duck Meets Favor as Market Fowl

The Aylesbury duck comes from the Vale of Aylesbury, from which fact it derives its name. It is the market duck of England. It has a long body, deep keel, and legs placed a little behind the center of the body.

The Pekin is Chinese, and is the most popular market duck in America. Its legs are set far back, giving an upright carriage.

While the Indian Runner is not a popular market duck on account of its small size, its flesh is tender and palatable, and its foraging habits give it a game quality that will make it in demand with epicures.

Watch Young Birds

Watch young and delicate birds very closely as they are most susceptible to the deadly roup germs. The same is true of fowls suffering from common cold or catarrh. The throat and nasal passages, being already sore and inflamed, are easily infected. Sick birds should always be isolated. They can be much more effectively treated when away from the flock and they cannot contaminate the healthier ones if the disease should prove to be contagious.

Don't Hurry Pullets

It is best not to hurry the pullets into heavy production. Allow them to come into production normally without feeding highly stimulating feeds. Fewer "blow outs" will occur when production is not forced on the start. Feed two parts of grain to one part of mash. The pullets will continue to gain in weight and still receive enough protein to encourage the egg organs to function without interfering with growth. Any change in feed is to be discouraged.

Poultry Hints

Early-hatched pullets produce fall and winter eggs.

Overcrowding in the poultry house discourages production of eggs.

Sitting hens should be dusted with sodium fluoride before being put on the nest.

Gather the eggs frequently to avoid the dirt that may be carried in on the hen's feet.

Chicks hatched so as to begin laying the first of October are usually the most profitable.

As many farmers have found, profits with poultry can easily be increased by better feed and care.

When possible it is well to have a pen where the little pigs can go for food but to which the sows do not have access.

A colt may be fed on cow's milk provided the milk is not too rich in fat. Use the milk from a cow that does not give very rich milk.

Unless pullets are laying by October 1 they will miss a great deal of the high-priced egg period. If they start laying much earlier than this, there is danger of a fall moult.

A small poultry flock properly fed and cared for is more profitable than a large flock given indifferent care.

Protein is a constituent of feeding stuffs which is used by chickens for building muscles and tissues, in addition to the production of eggs.

Early feathering and early crowing mean early maturity. Early maturity means early profits. Always select the cockerels that feather first and then select from them the one that crows first.

Mistake With Geese

A common mistake made in raising geese is to try to feed them upon grains without sufficient grazing. If the geese have good green feed they will need but little additional. Grit and oyster shell should always be accessible. During the summer a satisfactory method consists in providing one feed a day of equal parts of corn meal bran and ground oats. During the winter the same grains are satisfactory, but steamed clover or alfalfa hay should be added.

Grain for Geese

Geese should not be fed hard grains, but ground feeds mixed in what are known as mashes and fed in a moist state. A good ration for geese would be three parts of yellow corn meal, four parts of wheat bran, one part of red dog flour or flour middlings. To this add 5 per cent of meat scraps and during the laying or breeding season 15 per cent. At all times 1 per cent of fine sifted sand and one-half per cent of fine table salt. Any kind of green feed will help.

Hard Secret to Keep

They say that the secret of health is in eating onions, but what we want to know is how to keep it a secret.—Urban "Tilze"

POULTRY FACTS

EGG PRODUCTION DURING SUMMER

Poultry Men Agree That It Depends on Best Care.

Facing poultry men during the summer is the problem of preventing a rapid drop in egg production with the coming of warm weather, when eggs bring good prices. Standard egg production in New Jersey for June is 18 eggs per bird, for July it is 16 eggs, and for August, 13 eggs. Whether or not a flock makes standard production during these three months depends entirely on the care it is given by the poultry man, announces the poultry department of the New Jersey agricultural experiment station.

According to the station, successful poultry men agree that good summer egg production depends on attention to little details of management and not on one outstanding factor. Culling the flock, for example, is not the most important factor in obtaining standard production, but just one of the many factors. In fact, culling should be last in the effort to hold production.

The laying house should receive attention first, as a means of holding egg production. All windows should be opened to provide good ventilation and to keep the house cool.

Lice and mites are often the cause of the flock falling off in production. Careful inspection of the birds and coop should be made once a month for these parasites. It is considered a good practice to treat the flock for body lice by using sodium fluoride or any lice powder. Generally, one treatment is sufficient for the entire summer. The roost, drop-boards, and nests should be painted with any coal tar product as a means of controlling the mites. When such cannot be obtained, a mixture of kerosene oil and old crank case oil from the tractor or automobile can be used to advantage.

Heavy consumption of mash, so important to heavy production, is obtained in the summer by feeding only 8 or 10 pounds of grain to each 100 birds; keeping mash always before the birds; and keeping the layers confined to the house where they will always be near the mash hoppers.

Other factors found to be important in feeding are: a daily supply of fresh green feed such as dandelions, lawn clippings, and weeds from the garden; and a constant supply of fresh, clean, cool water.

When production falls below 50 per cent, it is time to start culling. If the foregoing factors mentioned have been carefully followed.

The Community Farm News

C. W. KRATHWOHL, Editor and Publisher.

DON A. BUNNER, Associate Editor.

The Community Farm News.

With this issue we begin the regular publication of the Farm News, which will be published on Wednesday of each week.

The generous response of our people to our call for subscribers leads us to believe that our new publication will fill a real need in this community and receive the support that is so necessary to make a venture of this kind a success.

It will be our aim to give the people of this community a real live and readable paper, which of course will be governed by the moral and financial support we receive.

We especially request that the people in the country as well as those in town send in all of the items of interest that may come under their observation. Personals, minor events, etc., no matter how insignificant they may seem will be gratefully received. Do not be afraid that you cannot word them properly—just give us the facts and we will arrange them suitable for publication. By aiding us in this manner you will be responsible for the making of a more valuable and voluptuous newspaper.

Owing to the fact that our subscription list is not as large as we wish to have when we apply for second-class postal rates, we are going to extend our special offer of \$1.00 per year until Tuesday night, July 2nd, at which time the reduced rate will positively be withdrawn and the regular price of \$1.50 charged.

Assuring all the people who have thus far shown their interest in our publication, by subscriptions or advertising, that we appreciate their support, and hoping that the same may continue to the benefit of the entire community, we are,

Very truly yours,
C. W. Krathwohl, Publisher.

Our Associate Editor.

I am pleased to announce that I have secured the services of Don A. Bunner who will act in the capacity of associate editor and advertising solicitor during the next few months.

Don, who is well and favorably known to the readers of the Community Farm News has been taking a course in Journalism at Indiana University. With this in mind and knowing him personally I believe that he will be a valuable acquisition to the staff of the community's newest journalistic enterprise, the Community Farm News.

C. W. Krathwohl.

Curricula of Many Educational Institutions Merely Wasted Expenditure

By DOCTOR TIGERT, President University of Florida.

Education, like legislation, may become too highly detailed for general use and efficient operation. Curtailment of the curricula of educational institutions is one of the ways to eliminate wasted expenditure. The need is for earlier entrance and graduation of students and the operation of educational machinery on a business basis. American students are graduated two years later in life than those of Europe.

Democratization of junior education is another feature. We have as many as sixty or seventy courses in our high schools, and our system now is articulated with industrial order.

Fault of Modern Education That It Gives No Clue to Significance of Life

By REV. S. M. SHOEMAKER, New York.

Our education today gives us so much knowledge and so little wisdom, so much sophistication and so little maturity, that when we have run the gamut of exciting sensations and exhausted the possibilities of such life as we know, our souls are like rags wrung out, like squeezed lemons.

It is a most baffling and uncertain time. The old anchors and moorings are gone. The assurances which science and the new liberty held out to us have not materialized. The animal existence which gives free rein to the instincts does not invariably lead to liberty, but often to worse enslavement than before. The intellectual life of investigating and learning, is high and fine, but it gives no clue to the significance of life.

It was Jesus' personality throughout the centuries that has compelled men to follow Him, and although His presence is no more visible on the earth His appeal to youth has grown even greater. The mark He has left upon history has been only a white mark. Many crimes have been committed in the name of His religion, but they were faulty human mistakes in application. Jesus himself has only exercised a beneficent and ennobling influence upon men and the world. Such a one, standing in front of the moral and spiritual vanguard of humanity, has a right to call each of us, and expect us to take up like men, and not run and evade like cowards.

Modern Youth May Be Depended Upon to Measure Up to Test Put on It

By CONGRESSWOMAN RUTH BRYAN OWEN.

They talk about building more ships for defense against outward enemies! There are two ships we need within the nation itself—Citizenship and Statesmanship. A real republic is not governed by a small group, but by the service of each individual pulling together for the national good.

It has taken woman seventy years to find her place in the community. She is now gradually finding her place in government, and the future promises to see woman as a figure in international affairs. Uncle Sam needs a wife to help him with the national housekeeping.

On the young people of today depends the future of the republic. It is part of my campaign to give them an opportunity to play up to. Youth has always measured up to the test put to it. Look at youth's rally in wartime!

We still have the pioneer spirit in youth, and that spirit is as important today as it was when physical sacrifice was asked of the pioneer. We have our Lindberghs and our Amelia Earharts, who are more representative of American youth than the types criticized in the newspapers.

The same spirit is exhibited among young people with regard to citizenship. I am working chiefly among high school boys and girls, and the response proves that even they want their opportunity to be of service.

Unjust Taxation

Excerpts From Address of W. C. Harrison at Bankers Meeting, Warsaw, June 14th.

At the present time, there seems to be only two groups of people whose property is taxed at anywhere near 100% on the dollar. All other groups seem by one manner or another to be able to avoid 100% valuation on their property for the purpose of taxation. The two groups of people who bear the burden of 100% valuation on their property are the farmers and the bankers.

The bankers are in a better position to determine just what the effect of such taxation is upon their business and because of their complete system of accounting, have been able to show by figures that their taxes are far in excess of what they should be if they were taxed upon the same basis of other competing moneyed capital. Unfortunately, the farmers have not kept complete records and cannot show the discrimination so well, but there is little doubt in the minds of those who are in close touch with the agricultural situation that one of the most pernicious influences creating agricultural depression is that of heavy taxation.

The program which the Indiana Bankers Association has entered in upon is not a program of tax evasion but it is rather a program of tax education and reform. The banks of Indiana are perfectly willing to bear their proportionate share of the increasing load of public expenditures but they are not willing that they or any other class should have to bear a share of that expense entirely disproportionate to what other groups or individuals pay. The banks, therefore, are merely attempting to have their rights judicially defined and for that reason are bringing lawsuits which are nothing more than friendly litigation. In the event that the courts hold that the present tax system of Indiana is discriminatory as to banks, it is the hope of the Association that it will be able to effect a revision of the tax system of the state. Such revision would

contemplate relief not only to banks but as well to other classes of individuals and companies that are being unfairly taxed. Such a revision would contemplate making equality the cardinal principle of the Indiana system of taxation.

Mr. Harrison presented statistical figures showing that banks and farms were paying about 50% more than their just share of the taxes.

Dairy Hints

A dairy barn should be white-washed at least once a year.

Pure bred of good quality do better in the feed lot than scrubs or common stock.

There are more dairymen who have been using soy beans this past winter than ever before.

A goal of 8,000 to 12,000 pounds of milk per cow is a reasonable aim for the average dairyman.

Off-flavor in milk can usually be avoided by milking the cows before feeding them instead of after.

There never was a cow so scrubby as to feed her calf oleomargarine. How some humans have degenerated.

Dairy herd improvement association records are becoming more and more necessary to the successful sale of surplus females.

Pails and cans after they are washed and sterilized should be inverted to drain and dry in a clean place, preferably inside the milkhouse.

Cows show their appreciation of good care by increased production. Provide plenty of bedding, balanced and abundant rations, a supply of salt.

The cream screw of the farm cream separator should be adjusted so that the cream will test about 35 per cent fat during the winter months. Cream that is too thick is difficult to handle and sample—especially when cold.

Full-fed cows give brimming pails of milk. Feed liberally, yet carefully, of balanced rations, says Pennsylvania State college dairy specialists.

Use your milkhouse for the care and handling of milk only—not to store tools and implements. Milk needs all possible care to keep it clean.

The calf's mother knows more than anybody about raising the calf. But her method is frequently too expensive. When so, it's perfectly feasible to raise her youngster on skim milk.

MENTONE ITEMS

Mrs. Floyd Goodman and sister Ruth Rapp of Hammond were guests of Mrs. Dora Goodman last week.

Mrs. A. E. Vandermark was in Rome City visiting Mr. and Mrs. Harve Kesler the latter part of last week.

Mr. and Mrs. James Smith of Gary visited over Sunday with Mr. and Mrs. Verdo Smith and other relatives.

Mrs. George Lyons, Mrs. George Stockberger and Mrs. A. E. Eberle were in Fort Wayne last Wednesday.

Mr. and Mrs. T. J. Eiler and Mr. and Mrs. Samuel Edson of Hicksville, Ohio, were Sunday guests at the home of the former's son, C. O. Eiler and family north of town.

Virginia Lyons, who is in Nurses training at Saint Vincents hospital, Indianapolis was in Mentone visiting with her parents Mr. and Mrs. Frank Lyons over the week end.

Mr. and Mrs. George Jefferies entertained at supper Monday evening, Malcom Hire of Jamaica New York, Virgil Hire of Delphi, Harvey Hire and Mrs. H. L. Hire of Mentone.

Mr. and Mrs. Mark Knickerbocker, of Cedar Rapids, Iowa are visiting relatives in this community. Mrs. Knickerbocker was formerly Olive Dille of this community. This is their first visit in Mentone for a number of years.

Mr. and Mrs. Verdo Smith entertained the following guests at dinner Sunday, Mr. and Mrs. Clark Ernsberger, Mr. and Mrs. M. O. Smith and family of Mentone, Mr. and Mrs. James Smith of Gary and Lois Ernsberger of Chicago.

Correspondents Wanted

In order to better serve this community, The Farm News needs correspondents to cover items for the following places—Harrison Center, Palestine, Burket, Sevastapool, Beaver Dam, and other communities nearby. If you are living in a community

that is not represented, that should be, why not take the responsibility of regularly sending in the items yourself. We will furnish you with the necessary supplies and instructions to get you started. By so doing you will be rendering a service to your community that is unestimable. Nothing can be done without cooperation and by representing your community in a community paper, you are helping to band that community into a stronger and more valuable place to live. Don't hesitate, write or call today

Community Farm News

A newspaper, titled as above, appears on the Reflector desk. It is of the small magazine style and its publisher, C. W. Krathwohl of Mentone explains it is a sample of a regular issue of which he will launch Volumn One Number One, June 26th. Here is hoping the business men of Mentone and citizens generally of that community will give our friend the support he so richly deserves. Mentone has been struggling along without a newspaper for a long time, altho her Gazette had lived to be up into the forties. Surely a great lesson in the need of co-operation has been well learned by this time. Surely Mentone is too good a town and the center of too fine a farming community to lose its identity in the field of weekly publicity—Argos Reflector

Editor Note—We do not like to brag but such a fine bit of encouragement swelled us up to the extent that we could no keep from reprinting the foregoing article in order to show the readers of the Farm News what others think of us.

Peace Too Dearly Bought

I am a man of peace. God knows how I love peace; but I hope I shall never be such a coward as to mistake oppression for peace.—Kossuth.

Jewels in Watches

The use of the jewel bearings for watch pivots was introduced by Nicholas Fahr about the middle of the Eighteenth century. Five was the first number used. This was adopted almost immediately by the Swiss watchmakers. Formerly diamonds and sapphires were used entirely; rubies much later, which have not proved so satisfactory.

Animals Should Be Blanketed and Tied in Cool Barn.

Cattle which are to wear blue ribbons at the county or state fair this fall, should have the fine polish put on their appearance, according to the specialists in dairying and animal husbandry at the Ohio State university.

After the animals to be shown have been selected, the specialists say, they should be tied in a cool, dark barn, and should be blanketed, and that within the next few days, not just a week or so before the fair at which they are to be shown.

Before their blankets are put on, the prize-winners-to-be should have a bath, in water which is not too cold. If they have not shed their long, rough hair, it should be clipped at once, so that their coats will be smooth by fair time.

Their tails, necks and heads should be clipped again about a week before the fair, and their horns polished at the same time. They should be groomed and rubbed down daily.

Animals should be in good flesh to show well. If rapid gains in flesh must be made, a little molasses along with their grain mixture may help. Soaked beet pulp will also help in putting them into condition. Bulky feeds, rather than highly concentrated ones, are better in fitting show animals for the ring.

Every day the animals should be led into the open for a little exercise and to be trained in posing for the judges. "The benefits derived from showing at fairs are not measured by the premium money received, but by the education, acquaintance, and advertising that one gets," say the specialists.

Facts for Egg Producers WHO WANT "More Money for Eggs"

Although there are more hens on farms, yet there will not be an over-supply of high quality eggs.

More money can be had only by producing high quality eggs. We have the buyers and we pay for quality.

QUALITY Eggs

Are those which are of good size, clean, sound, strictly fresh and white yolks, ordinarily not more than two or three days old.

If you need further advice in producing quality Eggs get in touch with Mr. C. L. Manwaring, or with your State Agricultural College and the U. S. Department of Agriculture, at Washington, who are interested in this problem.

Prices of ordinary eggs are low, but prices on high grade quality will continue to advance.

Louis Kadans Co., Inc.,
306 Greenwich St., New York.

More Praise

The people of Mentone community should certainly thank George Clark and Kenneth Riner for the interest they have shown in getting the Community Farm News started. Everyone will know better than ever how to appreciate a paper now that they have been without one for nearly two years. Now that the boys have the paper started it will require the cooperation of all to keep it on its successful trend. If you want a paper—and by the way the subscriptions seem to be coming in looks like you do—you will have to help by sending in all of the news items that come to your attention. Let's show the boys that we do appreciate their effort by being loyal boosters for the new paper.—A Subscriber.

Stop Thief Association

In May 1927 a group of farmers of Mentone community organized the Stop Thief Association, an organization banded together for the purpose of creating a fund, out of which rewards could be offered for the apprehension and conviction of thieves. The advisory committee made up of R. E. Riner, F. L. Busenburg, and John Weissert determine that the reward will be in every case and also decide what action will be taken by the association. The membership fee is five dollars which entitles one to membership without further fees until the treasury funds are depleted. This is an entirely altruistic enterprise for the benefit of the farmers and others interested in receiving protection of property and was not organized for profit. The officers of the organization are not paid salaries.

While they are enjoying an appreciable growth, they are interested in increasing their membership to one hundred before the spring chickens are old enough for the thieves market. The present members have been benefitted in that they have had no losses since the organization of the association. We certainly believe that this is valuable protection for the farmers and suggest that any one in-

terested should get in touch with one of the above mentioned advisory board or K. R. Riner, Secretary of the association.

MENTONE ITEMS

Mrs. Chester Manwaring was in Chicago with her father last week.

Clara Belle Brugh is helping Mrs. Charles Emmons for a few days.

We want to see you at the community building tonight. See page two for announcement.

Mrs. Linus Borton was the guest of her brother, Rev. Riddle and family in Warsaw Friday.

Dr. and Mrs. T. J. Clutter were the guests of Mr. and Mrs. William Clutter of Fort Wayne last Sunday.

Mrs. Isaac Sarber was called to Warsaw Friday afternoon on the account of the death of her uncle, Allen Turner.

Misses Ada Whetstone and Francis Nuell spent Monday afternoon in Warsaw.

Mr. and Mrs. Cleo Darr and Mr. and Mrs. Howard Darr of South Bend called on their grandparents, Mr. and Mrs. Holmes Tipton Sunday.

Rev. and Mrs. J. S. Johns and daughters, Amelia and Miriam, visited their son, J. Oren Johns and family of Orleans, Indiana from Thursday until Monday of this week.

Sunday afternoon the sheriff of Marshall county notified Derril Coplen that he had found his trailer that was stolen Friday from his home in the north part of town. The famous auto bandits of Saturday's fame were alleged to be the thieves. Mr. Coplen went to Plymouth Monday to get the trailer.

Elmer Baker suffered a broken collar bone and bruises about the head when he fell from the roof of the Anna Blue house, which he was assisting to repair. This is the second unfortunate accident of its kind to happen to Mr. Baker, about nine years ago he had a similar fall and suffered the same injuries when he fell from the roof of a house owned by Wm. Blue.

Mrs. Mary Swain 91, received several broken ribs and many head bruises when she fell down the basement steps of their residence last week. The door to the basement steps is of the trap variety and it was through it that Mrs. Swain fell. Although she was very ill for a few days she is reported to be improving rapidly. Mrs. William Thorton of Chicago, and George, Charles and Howard Swain of Covington, Kentucky came to Mentone last Monday evening to be with their mother.

Employed by Farm News

We are pleased to state that Marjorie Robbins Halterman, formerly with the staff of the Gazette, is now employed at the Farm News office in her former capacity, typesetting and news gathering.

Former Citizen Passes-Away

Allen Turner, 72, a former Mentone citizen passed away last Thursday night at 12 o'clock at his home in Warsaw. He had been ill for two weeks with a serious heart attack. Mr. Turner was born west of town and had lived here for many years before he moved to North Manchester. He lived in North Manchester eight years and then moved to Warsaw where he resided at the time of his death. He was a very prominent and well known man, having been a member of the Methodist Church and Modern Woodman Lodge here.

He is survived by his widow, Mrs. Allen Turner, a son, Mack Turner, two grand children, Allen Jr. and James K. Turner, of Warsaw; a brother, James Turner of near Palestine.

Funeral services were held at the Mentone Methodist Church at 2:30 o'clock Sunday afternoon, burial was at the Mentone cemetery.

Copy for ads must be in before Friday, 10, a. m.

Baptist Church

You are cordially invited to attend any and all services of our weekly calander. Sunday School convenes at 9:30 a. m., Morning worship at 10:45 and evening service at 7:30. We also urge your attendance at the prayer service each Thursday evening at 7:30.

On Sunday July 7, Rev. Harry M. Lintz, who has recently returned from a tour of the Holy Land, will speak both morning and evening from our pulpit. He is a graduate of the Moody Bible Institute of Chicago and on this date will bring with him some of the musical talent of the Radio department of that institution. You will want to hear both him and them. On Saturday night preceeding these services these young people will hold a service at the church in which they will again present the pictures depicting the life of Moody Institute. These pictures have been changed since shown here two years ago, due to the fact that improvements and changes have taken place in the School.

These folks came under the auspices of the young people's church. Be sure to hold these dates open Saturday night and Sunday July 6 and 7.

V. E. Squibb, Pastor

Gordon's Tragic Death

Gen. Charles George Gordon, a British soldier and adventurer, died fighting the Mahdi desert tribesmen in Khartum, the Sudan, in 1885, just two days before the arrival of a British relief expedition. He had been besieged nearly a year. The reading world followed the drama with intense interest, only to be shocked by its tragic end.

MENTONE ITEMS

Born to Mr. and Mrs. Wilbur Long, June 16th, a boy named George Franklin.

Miss Louise Black and Jennings Carter were out of town the latter part of the week.

A mule can't kick when he is pulling; He can't pull while he is kicking; Neither can you—Contributed.

Mrs. Donald Downing of Hammond was in Mentone last week visiting her parents Mr. and Mrs. Jonas Eaton.

Charles Shafer who underwent an operation at the Wesleyan hospital in Chicago is reported to be improving rapidly.

Rondo Minear of Huntington, W. Va., stopped off in Mentone a few days last week enroute home from a convention in Chicago.

Mr. and Mrs. Robert Snyder were the guests of his parents Mr. and Mrs. I. F. Snyder while they were visiting in Mentone last week.

Richard McAloy of Terre Haute, James Abel of Greencastle Joseph Kidd of Roslyn, Pa., and K. Joseph Devadanam of India were the guests of George Clark Friday and Saturday. They were enroute from the Y. M. C. A. student conference at Lake Geneva, Wisconsin to Terre Haute where they will be the guests of Mr. McAloy over the week end. Mr. Joseph Kidd is the general secretary of the Indiana University Y. M. C. A. and Mr. Devadanam is a student at the University.

Peace in Self-Surrender

Only the soul that with an overwhelming impulse and a perfect trust gives itself up for ever to the life of other men finds the delight and peace which such complete self-surrender has to give Phillips Brooks.

Many Articles of Wood

Wood is used in more than 5,000 articles in use today, either in its natural state or altered chemically, according to a writer in the Farm Journal. And, what is more surprising, he estimates that two-thirds of the population of America still use wood exclusively for fuel.

Gas to Foil Burglars

Fumes of penetrating gas are contained within the chain of a lock that an eastern inventor has introduced to discourage thieves, says Popular Mechanics Magazine. Should the chain be cut, broken or otherwise tampered with, the gas is released and is intended to overcome anyone who is attempting to force an entrance without a key.

Eskimos Cling to Sea

The Eskimos are inhabitants of the northern coast of the American continent down to latitude 60 degrees north on the west and 55 degrees on the east, and of the Arctic islands, Greenland and about 400 miles of the nearest Asiatic coast. They prefer the vicinity of the seashore, from which they rarely withdraw more than 20 to 30 miles.

Tibet Has Bitterest Winds

The natives of Tibet, in southern Asia, lay the bad condition and the loss of their teeth to the cold and extremely sharp winds of their high mountain land. This idea seems to have some basis in fact. A traveler named Saunders, who visited the country in the interests of science, testifies that the Tibetan blasts peeled off almost all the skin of his and his comrade's faces, says the Gas Logic Magazine.

Away On The Open Road--- Carefree

The Sevastapool Sunday School enjoyed a picnic dinner at Silver Lake Sunday.

Mr. and Mrs. Mahlon Jefferies and daughter made a business trip to Chicago Saturday.

Mr. and Mrs. Andy Funnell and family of Gilead were guests of Mr. and Mrs. Joe Hinz.

Several young people from Mentone attended the skating rink at Silver Lake Sunday evening.

Mr. and Mrs. William Fisher of Fulton called on Mr. and Mrs. Henry Robbins Sunday evening.

Loah Jeane Fleck visited with her grandparents, Mr. and Mrs. Jerry Robbins during the past week.

Mrs. Lee Blue and children spent over Sunday with her parents, Mr. and Mrs. Charles Personett of near Warsaw.

Mr. and Mrs. Virgil Nelson and family and Mr. and Mrs. Riley Nelson of South Bend were visitors in Mentone Sunday.

Dorothy Whetstone of South Bend and Louise Whetstone of Peru are spending a few days in Mentone with relatives.

Carl Eaton, Miner H. Mollenhour, Gaylord Emmons, Ralph Beltz, and Glenn Grady went to Flint Michigan Friday to get Chevrolet cars for the Eaton Chevrolet Sales.

Lost—A pocket book, containing money. Lost between Mentone and Harrison Center church on June 9th. Five dollars reward will be paid for the return of same to George Butchel, Route 5 Rochester.

BINDER TWINE

TALMA ITEMS

John King has purchased a new Chevrolet automobile.

Helen Clark spent Friday afternoon with Rosella Busenburg.

Mr. and Mrs. George Bryant were in Rochester on business Saturday afternoon.

Mr. and Mrs. Lloyd Kesler were Friday evening callers at the Abe Haimbaugh home.

Mrs. Mary Hisey is very poorly at the home of her daughter Mrs. Miles Perschbacher.

Miss Geraldine Haimbaugh was the guest of Miss Hope Coplen Saturday night and Sunday.

Mrs. Pierce Arnsberger of Burket is assisting with the work at the home of Mr. and Mrs. Joseph Grass.

Mr. and Mrs. Robert Horn and family of Rochester spent Sunday with Mrs. Horn's parents Mr. and Mrs. Ora Horn.

The grandchildren of Mr. and Mrs. Jerry Byrer of the Knights Town Legion Home are here to spend the summer.

Marjorie Kesler of Warsaw is visiting her grandparents, Mr. and Mrs. Abe Haimbaugh and Mr. and Mrs. Milton Kesler.

Mr. and Mrs. Oliver Kalambacker and children spent Thursday evening with her parents, Mr. and Mrs. Frank Partridge.

D. M. Bryant of Los Angeles, California, has returned home after visiting with his parents, Mr. and Mrs. George Bryant.

The little daughters of Mr. and Mrs. Harley Zolman spent last Wednesday with their grandparents Mr. and Mrs. Ora Horn.

Relatives of Mr. Frank Partridge gathered at his home Sunday afternoon and gave him a surprise it being his 55th birthday.

Dale Davis, son of Mr. and Mrs. Oliver Davis of Hammond has been visiting at the home of his aunt, Mrs. Peter Horn, for the past week.

Miss Geraldine Haimbaugh, Miss Hope Coplen, Everett Rathfon and Delbert Hunter motored to South Bend Sunday evening and attended the show there.

Charles Spanburg of Hammond and Lois Mercer of Rochester are guests at the Fred Mercer home.

Miss Dorothy Deamer who has been attending De Pauw University has returned home for the summer.

Mrs. Frank Southers of Hammond is here to spend several weeks with her mother, Mrs. Lizzie Barr.

Miss Martha Wiley of Mentone was the guest of Miss Buelah and Rosella Busenburg Wednesday and Thursday.

Mr. and Mrs. Elmer Rathfon and Mr. and Mrs. Isaac Kesler attended the North Bend School reunion at Bass Lake Sunday.

Mr. and Mrs. Milton Kesler entertained Mr. and Mrs. Lloyd Kesler to dinner Sunday, in the afternoon they motored to Logansport.

Miss Dorothy Horn entertained the Newcastle Township Orchestra last Monday evening at her home near Talma. Light refreshments were served.

The Childrens Day Program was given Sunday evening at the M. E. Church in Talma, a splendid program was rendered, short talk by the pastor, Rev. Shipley, a large crowd attended.

Mr. and Mrs. Obe Haimbaugh of near Mentone were among the relatives who attended the wedding of Miss Medrith Perschbacher which took place Saturday evening at four o'clock at the home of her parents, Mr. and Mrs. Miles Perschbacher.

The Newcastle Farm Bureau and ladies auxilliary met Wednesday June 19th, at the Talma High School for their monthly meeting. Music was furnished by the orchestra, songs by Dorothy Horn and Allene Emmons and several numbers by the Finney brothers. Mr. Emerson of Montgomery County was the speaker of the evening using Oil as his topic for elucidation. Short talks were given by Mr. and Mrs. John McKinney of Rochester and Mr. Wm. Gray, county chairman. The committee chosen to take charge of next meeting was Mrs. Ada Meredith, Mrs. Agnes Haimbaugh and Mrs. Nora Brockey.

MENTONE ITEMS

Miss Edna Pitman was the guest of Miss Lillian Igo last Sunday.

Mrs. J. R. Black is spending a few days with Mr. and Mrs. Orvin Heighway and family.

The Shirey and Keller reunion was held at the City Park, Warsaw, Sunday June 16th.

Lois Ernsberger of Chicago is spending a few days with Mr. and Mrs. Clark Ernsberger.

Mrs. Pearl Joyce and children of Warsaw were Sunday guests of Mr. and Mrs. John Carey.

Mr. and Mrs. Lyman Borton of South Bend were Sunday visitors of Mr. and Mrs. Lon Borton.

Malcom Hire, of Jamaica, New York, was taken into the Masonic Lodge at Mentone, Monday evening.

Mrs. Nellie Walters and family were entertained at the home of Mr. and Mrs. Omar Igo last Monday.

Richard Homman and friend, of South Bend visited with friends in Mentone and Silver Lake last week-end.

Mr. and Mrs. John Minear and Mr. and Mrs. Jesse Nuell and son Johnny visited relatives in South Bend Sunday.

Mr. and Mrs. Hershel Enyeart and family of South Bend were the guests of Mr. and Mrs. Ed Halterman last week.

Mr. and Mrs. Charles Blue of Fort Wayne were in Mentone last Sunday. They were the guests of Mr. and Mrs. Lon Blue.

Mr. and Mrs. Gerald Ballenger of Rochester, Mr. and Mrs. Isaac Jefferies and family and Mr. and Mrs. Floyd Halterman and daughter spent Sunday at Hill Lake.

Mr. and Mrs. Samson Emmons are the proud parents of a baby girl, born Friday June 14th, named Doris Jean. Mrs. Emmons was formerly Miss Marguerite Minear.

Mr. and Mrs. Omar Igo, Mr. and Mrs. Floyd Tucker and Francis Holloway drove to Anderson last Sunday and spent the day with Mr. and Mrs. N. J. Ballard and family.

Local Youths Leave

Ira Anderson, son of Dr. and Mrs. E. D. Anderson, who graduated from Indiana University this spring left last week for Chicago where he will be employed by Marshall Field and Company at their wholesale plant for the summer months. Next fall Ira will assume his duties as assistant professor in Northwestern University at Evanston, Illinois. Ira is a marketing specialist having spent the major portion of his time at Indiana University in pursuit of that subject. Since he received all of the honorary rewards possible for proficiency in Marketing at school, we feel that he should have little trouble in reaching the top in his chosen profession.

Almost as soon as Miles Manwaring returned home from Indiana University this spring, he left for Denver, Colorado. Miles is employed by the Troutdale Hotel in the Rocky Mountains. We do not know the exact nature of his duties, but knowing Miles as we do we feel sure that he will be a successful and we wish him luck in his new undertaking. He will return in the fall in order to get ready for school next year.

Clayton Clutter returned home from Ohio State University and visited with his parents, Dr. and Mrs. T. J. Clutter for a few days. Upon his return to Columbus, Ohio he will be employed by the Columbus Water Co. Clayton is a good boy and we expect much from him. He has planned to go north with his parents the latter part of the summer after which he will enter Ohio State.

Charles Manwaring has secured a position as Assistant Director of a large Boy Scout Camp at McCormick Creek Canyon State Park, Spencer, Indiana. The camp will accommodate 200 boys from four counties in that district. This is a line of work that will be healthful and enjoyable and full of valuable experience. Since Charles was a model Boy Scout himself, he should be an able director of Boy Scouts. Charles will return to Indiana University next fall.

Flies are Dangerous!!!

MENTONE ITEMS

See "A Hot Day" program on page two.

Mr. and Mrs. Allen Blue spent the week end in Logansport with their son Allen Blue.

Don't fail to see the local presentation of "A Hot Day" at the community building tonight.

Mr. and Mrs. L. W. Dunlap of Fort Wayne visited with old friends in and around Mentone last week.

A number of Mentone Legionnaires attended an American Legion Meeting that was held at Rochester last week.

Your presence is requested at a play entitled "A Hot Day" presented at the community building tonight at 8 o'clock.

Miss Marcia Long, daughter of Mr. and Mrs. Allen Long who is a nurse in Indianapolis was in Mentone over the week end.

Mr. and Mrs. Irvin Snyder were called to Fort Wayne Tuesday on account of the death of their friend Mr. George B. Saviers of that city.

Mr. and Mrs. Allen Long and daughter Marcia attended the Long reunion last Sunday June 16th, held at Lapaz at the B. A. Long home.

Miss Mary McGowen, a former Mentone High School student and now a graduate nurse of Fort Wayne was recently married to Calvin Beamer.

Community Loyalty

Being loyal to the community in which we live is but another term for selfishness. At least that is the way it works out according to our line of reasoning. Being loyal to our home town is certain to help it grow, and as it grows and prospers every member of the community will be benefited.

As the business and the social life of the community advances, permitting and presenting greater opportunities for profitable business and social activities, in the same ratio does our chance of profits and our ability to enjoy increased social pursuits present

themselves. So that is the reason we say—be loyal to our home town, if for no reason than that we will profit ourselves by doing so.

Don't Wash Eggs

At the present time, a great number of farmers wonder why they do not receive the top prices for their eggs. Undoubtedly there are various reasons why they do not, however, one important one which has been called to our attention by Samuel Stern, of Stern and Brauner, is the matter of washing eggs. Farmers feeling that clean eggs bring a better price on the New York market are right providing the eggs are not washed.

When an egg is laid, it has a film over the entire shell which preserves it from heat, cold and shrinkage. Water destroys this film, immediately opening up the pores of the shell and exposing it to the air. In order to receive top prices, white eggs must have light pale yolks. When eggs are washed the yolks darken the eggs shrink, and if put in cold storage, the yolks stick to the shell which in New York is called a spot egg. New York receivers usually notify the farmers to stop washing the eggs, however, a few continue to wash the eggs because they feel that clean eggs will bring higher prices than dirty eggs. This is true, of course, to a certain extent but New York would rather have eggs a little dirty than washed.

Recent experimentation has proven that steel wool is the best and safest method to use in cleaning eggs. In order not to rub off the film, the steel wool should be used lightly on the egg an egg that has a little speck or two should not be touched. To be safe, one should clean only the very dirty ones and leave the others untouched, because the fewer the eggs cleaned, the more likely one is to receive the top prices.

Valuable Invention

El Whitney patented his famous invention, the cotton gin, on March 14, 1794. This machine separated the seed from the cotton. Soon after the invention the output of cotton was about thirty times greater than it formerly was.

There are hermit souls that live withdrawn
In the place of their self-content:
There are souls like stars, that dwell apart,
In a fellowless firmament;
There are pioneer souls that blaze their paths
Where highways never ran—
But let me live by the side of the road
And be a friend to man.
—Sam Walter Foss.

WARM WEATHER FOODS

A cake which is one that may be served the children and will also be enjoyed by the grown-ups is:

Sponge Cake.—Melt one cupful of sugar in three tablespoonfuls of water over a slow heat, then boil up and remove from the heat while boiling. Separate the whites and yolks of five eggs. Beat separately. Add the hot sirup to the beaten yolks and stir well, add one cupful of flour sifted well with one-half teaspoonful of baking powder and a pinch of salt; mix well, add one-half teaspoonful of vanilla and fold in the beaten whites. Bake in a nine-inch angel food pan about forty minutes.

This cake with an ice or any frozen cream will make a delightful dessert.

Ham Loaf With Gelatin Relish.—Grind one pound of ham and two pounds of veal together. Soak six slices of bread in milk to cover; when soft heat up with a fork. Add the bread to the meat, three beaten eggs and salt and pepper to season. Shape in a loaf and bake uncovered in a moderate oven for one and one-half hours.

Gelatin Relish.—Add one-half cupful of horseradish to any lemon jelly foundation, with one red and one green pepper finely chopped. Turn into small molds and serve on lettuce with the ham loaf.

India Relish Sandwich.—Take one cupful each of cooked chopped ham and hard cooked egg, three tablespoonfuls of India relish, one tablespoonful of chopped stuffed olives, and two tablespoonfuls of mayonnaise dressing.

Quick Aspic.—Add one tablespoonful of gelatin to one and three-fourths cupfuls of hot bouillon or hot water and two bouillon cubes; it will make a pint of good aspic.

Cold Hard to Imagine

The earth's coldest spot has been found at Verkhoyansk, Siberia, just within the Arctic circle, where the thermometer has touched 90.4 degrees below zero.

The DAIRY

CURB DISCOVERED FOR ONION PEST.

Surest Way to Prevent Flavors in Cows' Milk.

Although onions and garlic appear early in the spring and soon disappear, they last just long enough before the grass gets well started to cause considerable trouble to milk producers. Observation has shown that if a cow eats a pound of onion tops, about two hours must elapse before her milk will be free from undesirable flavors.

It is not difficult, says F. H. Button, assistant professor of dairy industry, at Rutgers university, to perceive how some cows might get even more than a pound of onion tops in a day's feeding, and thereby require probably four hours before her milk becomes normal in flavor.

Many dairymen believe that the surest remedy for preventing onion and garlic flavors in milk and cream is to keep the cows in pastures where the obnoxious plants do not grow. Where the infestation is small in area, some men eradicate the plants by spraying with orchard heating oil.

The oil destroys the plants entirely. Large areas of infested land, however, are usually cleared by fall and spring plowing and then cropping the land for three or four years with such crops as corn, potatoes, soy beans and cowpeas.

Another common practice in the production of milk free from onion flavor is to leave the cows on infested pasture only for limited periods each day, until the grass advances to such extent that it supplies the wants of the animals.

Different Essentials of Profitable Ration

Dairy cows are equipped with a large stomach, divided into four compartments. Nature intended this large compartment as a store house for roughages and gave the cow the power of rechewing the food that had been hurriedly collected in large amounts. Concentrates were not listed in the cow's original bill of fare.

Alfalfa, clover and ensilage are the three farm roughages that will furnish more pounds of digestible nutrients per acre than can be produced by any other crops. Since the dairy cow was designed to handle large amounts of roughage let these bulky feeds furnish the basis of her ration. Such roughages as there are the basis of economic feeding.

Bulkiness should also be considered when making up the grain ration.

Have the mixture made up, in part, of bulky grains. When feeding large amounts of grain to heavy-producing cows keep the ration bulky. It is better to feed more pounds of a light-weight feed low in protein, than to use too heavy protein feeds. Where grain rations are heavy, weighing more than one and one-quarter pounds to a quart, it may be desirable to feed the grain with some bulky feed such as ensilage, beet pulp or sliced roots.

Milk Fever Treatment Given by Nebraska Man

Inflating a cow's udder with sterile air from a regular milk fever outfit when signs of milk fever first appear, and tying the teats with broad tapes just tight enough to retain the air is the most effective treatment known for milk fever, says Dr. L. V. Skidmore, Nebraska College of Agriculture, Lincoln.

Never drench the cow with any liquid or allow the tapes to remain on the teats more than 20 minutes, is a precaution to those administering treatment. The drench may go into the cow's lungs and the tapes may cause the teats to slough off. The theory that some dairymen have tried adding a little molasses to the cow's ration four to six weeks before calving has been found to be effective in some cases in preventing milk fever.

The characteristic position of the cow affected with milk fever is lying down with her feet extended forward under her body and her head turned backward toward her flank. There is generally a crook in the animal's neck resembling the letter S. Later the cow will become unconscious and stretch out full length on her side if she is not properly treated.

Calf Scours Is Usually Caused by Indigestion

Calf scours is a common disease of the digestive tract and is usually caused by indigestion. The calf that scours easily in life may be seriously handicapped and of course sometimes dies. Prevention is best but not always possible. Care should be taken that the calf is not overfed, that the milk is always fed warm, and that the milk is uniformly sweet and fed from clean buckets. If scours occur, cut the milk down one-half and give a dose of one to three ounces of castor oil or of mineral oil. Raw eggs may be used to correct the trouble. Two or three tablespoonfuls of lime water in the milk is sometimes effective.

Off-Flavored Milk Due to Bacteria in Pails

Bitter and off-flavored milk is generally caused by bacteria that enters the milk after it is drawn from the cow. A careful sterilization of every utensil that comes in touch with the milk will probably eliminate the trouble.

It is suggested by the University of Kentucky, in case of bad flavored

milk, that a sample of normal flavored milk that has soured, be added to the bucket at the time of the milking. This will enable the normal bacteria to gain the supremacy in the milk and will again bring it back to its normal flavor.

Stimulate Milk Flow

When cows are stabled much of the time the udders and rear quarters usually become more or less soiled. This can be prevented in a measure by clipping the long hair around those parts but even then frequent washing is necessary. If the best quality of milk is to be produced the udder should be washed before each milking. One man should go through the barn with a soft cloth and a pail of warm water doing this just before milking is started.

Knit Fabrics That Wear

Men who know fabrics and judge styles, recognize the distinctive class in Coopers mode... the smartness... the daintiness of weave... the skill shown in intricacies of their construction.

Coopers

Knitsuits for Men

fit because they're knit; they give as your body bends; they never chafe; made in wool, worsted, cotton or rayon; in light, medium and heavy weights. For these reasons, buy Coopers... always.

CLARK'S

POULTRY

FINDS NEW WAY TO STORE EGGS

Small Amounts of Carbon Dioxide Will Be Big Aid.

Eggs can be better preserved if they are stored where there is a certain amount of carbon dioxide in the air, according to Paul F. Sharp of the New York State College of Agriculture, who has just published the results of some experiments on eggs in Science.

Eggs stored in ordinary air spoil rapidly after they lose the carbon dioxide which is a part of the egg. As soon as an egg is laid it starts to become more alkaline and this hastens decay. This alkaline tendency, however, can be easily and conveniently neutralized and controlled if the eggs are placed where the air contains small amounts of carbon dioxide.

This discovery has a practical result because carbon dioxide can be introduced into cold storage rooms in amounts which greatly retard the destructive changes in the eggs and yet the amount in the air will not be enough to prevent workmen from entering the storage rooms. Carbon dioxide can be used also in shipping containers and in refrigerator cars.

A convenient source of this gas can be used, such as the solid form or the gas form in cylinders. Professor Sharp says the only method of preserving eggs which approaches this one in cheapness and practicability is the oil dipping method in which eggs are dipped in a suitable oil which very nearly seals the pores. The carbon dioxide method is superior to the oil method, because the whites of the oil-dipped eggs become cloudy in storage. Those preserved by the carbon are not cloudy after the eggs are removed from the air which contains the carbon dioxide.

Concrete Runs Outside Brooder House Are New

Concrete runs outside of the brooder house are a comparatively new addition to poultry farm equipment but are coming into use because of several advantages. They enable one to use a brooder house without danger from contaminated soil near them, save the labor of moving portable buildings and make it possible to keep chicks near the dwelling or barns, says a writer in the Rural New Yorker. As they do not have to bear heavy weights, a two-inch thickness of concrete is sufficient, except at the edges, where double that thickness is needed to prevent breaking.

They should be smooth for easy cleaning, have a slope for drainage, two or three inches, according to size, and need not be roofed. They

of course, may be of any desired size, so that they give an ample outside run, preferably not less than that required inside for the same number of chicks. They may have permanent fences or movable wire covered frames to set upon the concrete. Movable frames will facilitate cleaning. They may be lightly covered with sand, loam or litter, though the essential thing is that they be kept clean to prevent infection from droppings picked up by the chicks running upon them.

Ohio Station Advocates All-Mash Chick Ration

The rearing of chicks to maturity on an all-mash ration is a rather new venture in poultry keeping, and we shall have to take the word of those who have tried it as to its value. This system has been developed and advocated by the Ohio agricultural experiment station, at Wooster, and is fully described in a bulletin issued by this station. They state that they have found the method successful on their experimental farm and equally so in the hands of other poultrymen of the state. Some other stations, where it has been tried, discount these claims somewhat. There is no question as to the attractiveness of the plan and the results at the Ohio station should be sufficient to give warrant for trying it out.

Those who have followed the teaching of poultry experts over a considerable period of years have learned that there is little that can be considered as absolutely fixed, even in the seemingly fundamental principles of feeding and care. Revolutionary findings are apt at any time to upset long accepted practices. The all-mash ration should not have scratch grains added to it, since it combines in itself both the scratch and the mash and the addition of more scratch grain would unbalance it. That is, it would change the proportion of protein foods to the other ingredients and presumably lessen its value. An all-mash should be more coarsely ground than other mashes, to make it more palatable.

Raising Turkeys

Turkeys can be raised by artificial methods with less loss and more profit than by the hen-hatched and hen-brooded method. Each year the matter of growing more than 20 or 30 per cent of the poults has become more difficult. That the association of turkeys and chickens is one of the leading causes for the heavy losses in baby poults and that turkeys can be raised in brooders and hatched in incubators are comparatively new developments in the turkey situation.

In Case of Roup

Should any of your flock begin to show symptoms of roup, no time should be lost in starting measures to prevent further spread. All houses, pens, coops and runs should be thoroughly cleaned and sprayed with a strong solution of a good coal tar dip and disinfectant. Droppings, litter and

trash of every description should be removed and burned. All unnecessary equipment of every kind should be removed from houses and yards and stored elsewhere.

Profitable Dairy Cows Must Produce Much Milk.

A dairy cow will not pay her expenses, in the opinion of the head of the dairy husbandry department of an eastern college of agriculture, unless she produces at least 7,500 pounds of milk per year. This production, which he considers necessary to meet such charges as feed, labor and overhead, is 3,000 pounds greater than that of the average cow in the United States.

This authority suggests a minimum of ten cows for each full-time worker, assuming that the man who cares for ten cows will also do some other work about the farm. He says that a man with 15 cows can well afford a milking machine and recommends the use of litter carriers and drinking cups to keep labor costs on the dairy farm to a minimum.

Cow-testing work in many states is doing much to eliminate low producing, non-paying cows. It is the quickest and cheapest way in which a dairy farmer can locate and weed out unprofitable cows and at the same time learn how to combine feeds for best returns. Life is short at the best and no time should be lost in getting into cow-testing.

Dairy Notes

Protect dairy cattle from direct drafts of cold air.

The best way to control off flavors in milk is to prevent them.

Cream that is too thick is difficult to handle and sample, especially when cold.

Most cream separators will do much better job of skimming the milk when it is warm.

Had you ever thought that scouring of calves may be caused by a lack of scrubbing feed pails?

The dairyman who has records on his cows can command a premium price on his sale stock.

Of the milk produced in the United States, 46 per cent is used as whole milk and 40 per cent is made into butter.

Cows are improving every day but we haven't found any cows giving dry milk, and they know better than we how to water their milk.

Experiments indicate that calves develop heavier bones, increase faster in weight, and show better physical condition if they are allowed to spend several hours in the sunlight each day.

PASTURING GEESE ON CLEAN RANGE

As General Rule Fowls Are Given Freedom of Field.

The raising of geese has not been specialized like duck raising, for the reason that geese secure most of their feed by grazing. For this reason, geese are raised on most farms in comparatively small flocks. These facts are the principal reasons why geese raising offers an opportunity for most farmers to add another source of income to their spring poultry raising.

Geese may be pastured at the rate of 60 head to an acre, but, as a general rule, they are given free range. This is satisfactory so long as they are not numerous. However, if a large flock of geese is pastured on the regular pasture the live stock will not relish the pasture on account of the goose manure on the grass. Ordinarily, the number of geese raised on any one farm are not numerous enough to cause any trouble from this source.

Geese do not require a great deal of attention. After the first two weeks they are able to look after themselves if given a good range. The principal food of geese is grass, supplemented by insects and other low forms of animal life. If suitable range is not accessible it is not advisable to go into geese raising.

Houses that will protect the geese from rains in summer and from snow, cold winds and dampness in winter are the only essentials from the housing standpoint. Low, open front sheds are often used for this purpose. Care should be taken to see that the interior of the house is dry at all times. Geese like to swim and they will exercise in the snow practically all day, but they should have dry places to roost or they will contract rheumatism. The floor of such houses should be of earth. This should be covered with straw and renewed often enough so that it will be dry. A thin coating of sand often proves helpful in keeping the house dry.

Geese mate more successfully after they are two years of age than when mated earlier. This is more true of the females than of the males. Occasionally yearling geese will produce fertile eggs, but they cannot be depended upon. Small, undersized geese should not be used for breeding purposes. On the other hand, extra large, coarse geese are not as satisfactory as those of full development, but not so coarse. With most breeds the gander will mate with from three to four geese.

"April Fool" Idea

The origin of the custom of April Fool's day is obscure. Among the many explanations, the best one probably is, that in the old calendar when New Year's day came on March 25, the eighth day, or culmination of festivities, fell on April 1. After the prolonged celebration most people felt and acted like a fool; hence the practice of playing practical jokes on that day.

Mrs. Metz Passes Away,

Mrs. Naoda Metz, 78 years, passed away about five o'clock Sunday afternoon at her home in the south part of town. She is survived by three children, Mr. Ed. Whetstone and Mrs. H. D. Pontius, of Mentone, and Mrs. Milo Howard, of near Burket. The funeral was held Tuesday afternoon at 1:30 o'clock. Burial in Mentone cemetery.

More Exeitement.

The citizens of Mentone who were fortunate enough to be on Main street Saturday morning received a taste of the thrill of Chicago gangland, when state police officer. Pearson, and Art Keller, deputy sheriff of Marshall county drove in town in a bullet riddled and mud besmeared Buick

coach. The officers had been laying in wait for Whitesell in order to serve a warrant for his arrest. When Whitesell and Shireman appeared, the officers pursued and a running gun battle ensued. Although neither of the officers were seriously hurt during the chase, they shot Whitesell in the back with a shot gun. The chase ended when the bandets surrendered, after shooting chief of police, Jud Pettinger of Warsaw, in the neck with a gun Whitesell is reputed to be a bad man with a long record. He will be tried at Warsaw for assault and battery with attempt to kill and numerous other charges.

Community Newspapers

A fine community will not necessarily produce a fine newspaper nor can a fine newspaper always produce a fine community; but when both work together for the common good of all, there can be no doubt as to the result.—Plymouth Democrat.
