THE NEW TAX LAW

How the New Tax Laws Affect Farmers and Stockholders of the Northern Indiana Cooperative Ass'n.

There have been a lot of questions come up in the minds of the farmers as to how they will be affected by the recent tax legislation enacted by the General Assembly.

The Intangible Tax Laws make necessary the payment of a tax on intangibles of one fourth of one per cent of their value. The payment of this tax will be evidenced by the placing of stamps on such intangibles. This tax applies to notes, mortgages and other evidence of indebtedness to the taxpayer. This does not apply to stock in the Northern Indiana Cooperative Association or any other domestic corporation. By domestic corporation is meant any corporation incorporated in and doing business in the state of Indiana. These corporations pay their taxes in Indiana, and hence the stockholders are exempt from further taxation on account of owing any such stock.

Every person, partnership, corporation, or company of any kind is subject to the provisions of the Income tax Act of 1933, there being an exemption however to all persons or companies of one thousand dollars of income. Farmers are subject to a tax of one fourth of one percent on the amount of their gross receipts in excess of the one thousand dollars.

Petailers of all commodities are subject to an annual tax of one per cent on all retail sales in excess of the one thousand dollars exemption. The Northern Indiana Cooperative Association will pay an income tax on all of its sales in excess of one thousand dollars. This will amount to about \$800 per year on the basis on last years business. This tax is in addition to the regular property tax.

It must be remembered that all of this tax legislation was necessitated by the fact that farms, idle factories, and home owners who are out of work could no longer stand up under the heavy taxes imposed upon them. The truest measure of one's ability to pay is his income. It is true that many businesses are not making

money at the present time. Business will profit by this legislation as there will be a decrease in their property tax, which will to a certain extent offset their income tax. It is estimated that the new tax laws enacted will bring the rate in the country down to about a dollar tax on the hundred dollars of assessed valuation. In fact the new law makes a dollar the limit in the country and one dollar and fifty cents the limit in incorporated towns and cities. To this amount, the dollar and dollar and a half respectively, may be added any amount necessary for the payment of bonded indebtedness, and interest on same. Many townships and cities are heavily bonded. They cannot repudiate these obligations, and in order to make the new tax rate effective it was deemed advisable to make allowance for this bonded indebtedness, which allowance was not made in the old dollar and a half tax law.

Co-Operative Ass'n Build Addition

Workmen are now engaged in building a forty foot addition on the south end of the feed mill. This association has needed larger quarters for some time to properly care for the wants of its rapidly increasing number of customers and this addition will reach almost to their coal bins.

Whenever possible local workmen and materials are being used in making the building and every effort is being made to complete the building at the earliest date.

Steel beams are being used to support the floor and the siding and roof will be metal as in present plant. They have just completed the installation of a corn cracker.

Composition of Rainbows

In many rainbows some of the spectrum colors are missing, blue being the color that most frequently drops out. The reason for the variation in the arrangement of colors is that the rainbow is not a simple spectrum but is instead the piling up of a large number of spectra, which have been formed in various complicated ways. It may be said that each rainbow is in reality a number of rainbows grown together.

Get Cash During Banking Holiday

When all banks were closed during the recent bank holiday the Quality Butter & Egg Company of 167 Chambers Street, New York, had their representative at the Mentone egg cars, to advance cash to those who were in need of it. Some egg producers were willing to sell their eggs at a sacrificed price in order to get cash, however, were advised by Mr. Kalter of the Quality to ship eggs in the usual way, as undoubtedly it meant a better price to the producer.

This in return has led to more friendly relations between the producers and the Quality Butter & Egg Company.

Organize Lion's Club

On Thursday night March 30, a meeting was held at the Library for the purpose of organizing a local Lion's Club. A representative of Lions International was present and after a very interesting explanation of Lionism steps were taken for the organization of a local unit. Temporary officers elected were as follows: Kenneth Riner, president; 1st Vice-pres., J. S. Johns; F. R. Burns, 2nd Vice-pres.; Dale Kelley, 3rd Vice-pres.; Elmore Fenstermaker, Secretary; Chas. Shafer, Treas.; Tailor, H. V. Johns; Lion tamer, Maurice Dudley. Directors of the club are: R. E. Riner, C. L. Manwaring, T. J. Clutter and E. D. Anderson.

The Lion's Club is a civic organization organized for the purpose of promoting and fostering all things which are real value to the community. The first regular meeting will be held April 12 at the Lake Trail Cafe.

Secretary.

This Tree Grows Fast

A eucalyptus may produce in 20 years as much wood as an oak in a century, says Nature Magazine. The blue gum, Eucalyptus globulus, has been known to reach a height of 25 feet in 18 months after seeding and 65 feet within six years. If the young trunk is cut down, it at once sends up half a dozen new trees from the pollarded stump.

Funeral of W. Hibschan Conducted Sunday

Funeral services for Wallace Hibschan, of Mentone, who died Friday from the effects of taking a quantity of arsenate of lead in a suicidal attempt, was held at 2 p. m. Sunday from the Mentone Baptist church. Rev. V. E. Squibbs officiating. Burial was made in the Mentone cemetery.

Despondency over the death about a year ago of his wife is believed to have caused him to take the poison last Monday. He became critically ill almost immediately after taking the poison. Medical aid proved futile in the attempt by a physician to save his life and his condition continued to grow worse until his death, which occurred at the home of his son, Raymond Hibschan, near Syracuse. The son, a daughter, Mrs. Bert Holloway, of near Mentone, and a half sister, Mrs. Alfred Teel, of Mentone, survive.

Antlers Develop Quickly

White buck deer usually add only two points to their antlers each year, but "Dick," a two-year-old deer at the John Phillips game refuge, Latrobe, Pa., appeared with an eight-point set of antlers.

Irish Peat

Very little coal is found in Ireland. In Kilkenny county and adjacent counties coal of an anthracite variety is found, but not in large quantities. There are huge bogs in Ireland which furnish peat for fuel, the bog of Allen being the largest.

Sword Duels Between Sexes

Dagger and sword duels between women and even between women and men occurred frequently in the Seventeenth and Eighteenth centuries in France, Italy and Spain. One French actress, who dueled at the slightest provocation, challenged and killed three men in one evening.—Collier's Weekly.

Television Favors Blondes

Blondes are more suitable for television than brunettes, according to an expert of the British broadcasting corporation in London. This is one of the difficulties attending television, he says. Others include the unsuitability of the natural complexion. A London authority on theatrical make-up has found that blue paint is suitable for the best delineation of the eyelids, lips and other features.

MENTONE NEWS

Miss Eileen Mollenhour spent Wednesday with Miss Mabel Sarber.

Miss Kathlene Anderson took dinner Thursday evening with the Mentzer family.

Miss Frances Rush and Miss Mabel Sarber took dinner with Miss Eileen Mollenhour Saturday.

Mr. and Mrs. Charles Zent spent the past week with the formers brother Mr. and Mrs. John Zent.

Mr. and Mrs. Vernon Jones took dinner with Mr. and Mrs. Ellis Styles of Warsaw Sunday evening.

Mr. and Mrs. Sylvester Clark moved from their home east of Mentone to a farm near Piercetown this last week.

The Misses Eva Lorien and Martha Goshert of Winona Lake are spending the week with Mr. and Mrs. J. M. Preisch.

Mrs. C. O. Mollenhour and daughter Eileen spent Thursday with Mr. and Mrs. Fred Rush and daughter Frances.

At Jones' 1½ pounds Macaroni 10c. Jello 5c per box. Spaghetti 1½ pounds 10c. Bonita Coffee try it 23c per pound.

Miss Mabel Sarber who is attending Butler University spent the past week with her parents, Mr. and Mrs. Mace Sarber.

One dozen baby 3x4 photos in folders \$2.50 and we give an extra hand colored one free. Werner Studio, Warsaw.

Mrs. Rose Bogges, Mr. and Mrs. Charles Kern and son Jimmy spent Saturday with Mr. and Mrs. M. O. Mentzer and family.

Miss Kathlene Anderson who is attending Mac Murray College in Jacksonville Illinois is spending a few days with her parents.

Mr. and Mrs. Walter Creiger who have been spending a few weeks with Mr. and Mrs. H. Mollenhour have returned to their home in Butler.

Mr. and Mrs. Isaac Kesler and son Miles made a business trip to Kendallville Thursday March 16. They also took dinner with Mr. and Mrs. Harve Kesler and family.

It seems our insurance agents are putting on actual demonstrations to advertise their business. Two weeks ago an excess number of funerals. Life Insurance. Last week by wind large property loss. Cyclone Insurance. Sunday night two barns and two autos lost in fire. Fire Insurance. We would suggest an advertisement in the Co-op News would get the same advertising results and not inconvenience your customers so much. Come in and see our rates Mr. Insurance Man.

PRISER-SMITH

Miss Esther Priser, daughter of Mr. and Mrs. D. F. Priser, of North Manchester, was united in marriage to Paul Smith son of Mr. and Mrs. Ora Smith of Mentone on March 28, in North Manchester at 7:00 o'clock by Rev. Hartsouth of North Manchester. Miss Priser has been employed at the Post Office in Mentone for some time and is an acquaintance of many in this community. Mr. Smith is employed at the Lake Trail Cafe in Mentone.

Poultry Facts

Each dollar invested in lime returns three dollars or more to the pocket-book.

In breeding turkeys, more than with any other poultry, relationship should be avoided. When inbreeding is practiced, lack of vitality, crooked breast and other deformities will result.

Guinea fowls have a tendency to mate in pairs, but one male may be mated successfully with three or four females.

The 1932 crop of turkeys was 13 per cent above that of 1931. It is estimated that 18,000,000 were sent to market.

Although an increase is shown, turkey production in the United States is now only where it was several years ago, when the population of the country was much under the present figure.

No matter how prime the birds are at the conclusion of the fattening period, the premium of one or more may be lost through carelessness in killing and dressing.

The newest luminary in the poultry world is the record-breaking New York single-comb White Leghorn pullet that laid 355 eggs to break the present world's record in weight of eggs. She came within two eggs of equaling the record for the number of eggs established a few years ago by a British Columbia pullet of the same breed.

Long-Lived Englishman

Thomas Parr, British centenarian, was born in 1483 and died in 1635 at the advanced age of one hundred and fifty-two. He was referred to as the Olde Olde Very Olde Man. During the last year of his life the earl of Arundel sent him to the English court. The change from the country to the city is said to have caused his death.

Canada's Name

The origin of the word "Canada" is uncertain, but it is probably from the Iroquois "kanada," meaning a cabin, or another Indian word, "kanatha," signifying village. The early French explorers picked up the word somewhere, from the Indians, and applied it to an indefinite area which has now come to mean almost the whole northern half of our continent.

OBITUARY

Frank Plank Manwaring, son of Artimus and Anna Manwaring, was born in Severance, Kansas, May 23, 1880, and passed away at his home in Mentone, March 6, 1933.

He was married to Ersie Latimer Nov. 27, 1907. Surviving are the widow and three sons; Charles, Miles and Richard.

When he was about three years old the family moved to Mentone, where they resided until 1897 when they moved to Chicago. After about six years they returned to Mentone and Frank became associated with the Farmers State Bank, the institution of which he was president at the time of his death.

In the passing of Frank Manwaring the community has lost a useful and valuable citizen. He was always ready to do his full share in promoting the best interests of the community. His close business associates have lost a wise counsellor and friend. The family has lost not only a kind and loving husband and father, but a real and true companion.

CARD OF THANKS

We wish to thank our friends and neighbors who so kindly assisted us with their sympathy and kindness during our late bereavement.

Mrs. Ersie Manwaring
and Family

Number of decks shipped	80
Commission paid	\$1,067.95
Management commission	498.20
Cash on hand	715.24

C. V. BELTZ, Manager.

Writers' Punctuation

The system of punctuation as we now use it was introduced by a Venetian printer, Aldus Manutius, in the latter part of the fifteenth century. Little change has been found requisite. The modern points came into use gradually after the invention of printing, the comma, parenthesis, note of interrogation, and period being the earliest introduced, and the note of exclamation last.

Briefly Told

No man is happy who does not think himself so.

WORLD WAR YARNS

BY " " LIEUT. FRANK E. HAGAN

Through the Wheat

The One Hundred and Third Infantry of the Twenty-sixth division was made up of boys from Massachusetts, New Hampshire and Vermont. If you ask some one of the One Hundred and Third who was the greatest hero in the regiment he'll probably tell you that it was Private George Dilboy of " company and he's likely to add that Duboy was one of the greatest of all the World War heroes.

George Dilboy couldn't claim Mayflower ancestry nor a fighting heritage from Concord or Bunker Hill. He was a Greek immigrant boy, brought to this country by his father to escape persecution by the Turks six or seven years before the outbreak of the World War. But when the One Hundred and Third made an attack near Belleau on July 18, 1918, it was George Dilboy who raced forward under the fire of German snipers and machine gunners on a railroad embankment, throwing hand grenade after hand grenade until he silenced the enemy's fire and his platoon took the embankment.

But there was still work ahead. A hundred yards away across a wheat field a machine gun next opened up with its rat-tat-tat-tat. "I'm going to get that gun, Lieutenant," said Private Dilboy to his platoon officer. "I'm going to fix it so my platoon can go through." Before the officer could forbid the mad venture he was off, bayonet fixed, charging straight through the wheat toward the enemy. He had gone several yards before the astonished enemy realized that a lone American was charging their position. Then they concentrated their fire on him. But dodging, twisting, dropping to the ground, rising, stopping for a moment to take a pot-shot at them he continued on his way.

Half way across the field he suddenly staggered. The hail of lead stopped for a moment then was renewed. Dilboy almost fell, paused a moment then tottered forward as the machine gun fire slackened, then stopped because of a jammed cartridge. The American soldier kept on until he was 25 yards from the spitting engine of death. It opened up again and Dilboy went down. For just a moment he lay still then began to creep forward, dragging his right leg which had been cut off just above the knee. Digging in his uninjured foot he dragged himself closer and closer, then swung his gun forward and fired. A machine gunner went down. Dilboy crawled on another foot or two then stopped and aimed his rifle. Rat-tat-tat-tat—it could not miss now. But before those bullets tore their way through his body Dilboy had fired and a second machine gunner dropped. The rest of the gun crew fled. A few seconds later members of " company found him lying there. They say that there was a smile on his lips. He had "fixed it so the platoon could go through."

ACCEPTS POSITION

WITH H. V. NELLANS

H. V. Nellans has secured the services of George Scott, of Eaton Rapids, Michigan. Mr. Scott came highly recommended to Mr. Nellans by the professor of poultry husbandry, of the Michigan Agricultural College of Michigan, he having graduated there

Peacock coal for economy.

Yellow Jacket coal for a hot fire.

Bringing Pullets Back to Production of Eggs

According to Berley Winton, Missouri College of Agriculture, how to get pullets back into production in cold weather after they have gone into a molt in November or December is a question frequently asked. The reason why certain pullets molt is because they do not have the inherent ability to continue to lay during the winter. On the other hand, many pullets go into a molt because of faulty management or incorrect feeding practices. Pullets that lay heavily in the fall often loose body weight and this is thought to be the primary cause of such pullets molting. To develop pullets that are heavy in weight prior to the time they come into production and then feed them in such a manner that they will maintain that weight and continue to lay at the same time is difficult to do.

To get pullets back into laying condition in cold weather is likewise a real problem. The use of electric lights and the feeding of a moist, crumbly mash each day are the two methods commonly employed to hasten production. Both methods have the same effect in that they are conducive to a greater consumption of feed.

When electric lights are available care should be taken to see that they are used regularly—turned on and off at the same time each day. The use of lights in the morning does not require a dimming device and the operator is always at home. Just recently the use of all night lights has been reported with a high degree of success. Such a system calls for the use of 15-watt bulbs rather than a more intense light. This dim light will make it possible for the chickens to eat feed from hoppers at any time. Such lights will also reduce the cost of electric current. One light is used for each 200 square feet of floor space and should be suspended about six feet above the floor.—Missouri Farmer.

Beef Breeding Herd

The advantages of crossing good beef bulls on grade dairy cows, where the owner does not care to grade up his dairy herd, are numerous. The calves so produced will sell higher as veal calves. They may be fed out and sold as fat steers or heifers, thus utilizing some of the cheaper roughage and pastures. The heifers may be retained and bred back to a good sire as mentioned, thus establishing a grade beef breeding herd at little cost. Such a herd will produce market topping steers.

Gains on Lambs

Lambs are very efficient utilizers of feeds. Four pounds of corn and five pounds of alfalfa or clover hay will produce a pound of gain on a lamb. When corn is available at 1 cent per pound and hay at approximately 1/2 cent per pound, there should be a comfortable margin for the feeder who receives 9 to 10 cents for lambs. When feed prices are higher, one can easily calculate the cost of producing 100 pounds of gain and determine whether it would be policy to enter the game.

TWO BARN AND TWO AUTOS BURN

The barns of C. O. Ketrow and J. Giffon, in the south-west part of town were destroyed by fire about 1 o'clock Sunday morning, March 19th.

Aside from his barn and automobile Mr. Ketrow also lost about 100 chickens which were housed in an adjoining shed. The fire is supposed to have been caused by defective wiring, and when discovered it had gained such headway that the efforts of the fire department were of no avail. It is stated that the loss was only partly covered by insurance.

Beaver Dam Entertains

On Tuesday evening March 21st, the patrons of Beaver Dam school as well as many visitors and fans of nearby schools gathered at the gymnasium of the Beaver Dam School and enjoyed an entertainment in honor of their basket ball team, who were defeated in their conflict with Fort Wayne in the state tourney.

Beaver Dam is very proud of their boys, and had they been physically fit they would likely have finished the game the same as they began it. Coach Kindy is to be congratulated on his success and for this he was presented with a lovely Masonic ring by the patrons of Beaver Dam.

SURE WE'LL MEET YOU

Mr. E. E. Jones,
Care The Co-Op. News,
Mentone, Indiana.

Dear Sir:

I wish to answer your letter sent me via the Co-Op. News of March first. We farmers living east of the Co-Operative Feed Mill, accept the farmers living west of the mills challenge to play a base ball game at the all day picnic to be held during the summer by the Northern Indiana Co-Operative Association for all its friends and customers.

I will be glad to help arrange the details for this contest at some committee meeting called by Robert Creighton, the picnic day committee chairman. I take the liberty to suggest you keep your coat well guarded and be careful with it as we mean to get it.

Yours truly
FRANK CARLS.

Primitive "Steamship"

The Savannah, an American-built vessel of 350 tons, crossed the ocean from Savannah to Liverpool in twenty-five days, but the engines were only used as auxiliary power. When the wind was fair or the sea was too rough for steaming the paddle wheels were unrigged and taken on deck. The engines were only used a total of 90 hours during the voyage.

Fresh Air Is Cheapest Thing in Stock Ration

The cheapest thing in the ration for all live stock is fresh air. It contributes to the income from milk and meat as surely as does liberal feeding of a complete ration.

But this doesn't mean fresh air should come into the barn through cracks or open doors. It should come in by means of a well-designed ventilating system which at the same time removes the stale, moisture-laden air. A dairy cow breathes out ten pounds of water in 24 hours.

A good ventilating system requires good wall construction to hold heat in. There must be stoppage of all openings where passage of air is not wanted, and insulation to prevent escape of heat. Neglect insulation and your ventilation system will be faulty, your feed bills will be higher, your profits will be lower.

Live Stock Reminders

Feeding cubes to live stock is on the increase in this country. With the feed pressed into cubes there is less waste

In cases where grain is scarce and it is necessary to utilize largely roughage, low-grade stocker and feeder steers or helpers are expected to prove quite profitable for next spring.

A layer of straw several inches thick placed over the single board roof of the hog house or poultry house to prevent frost forming inside the roof is a good practice. Frosty ceilings melt and make the house damp.

Brood sows need exercise. They also require some well-cured alfalfa or clover hay. A good mineral mixture will help keep the sows in condition. Let them have free access to both hay and minerals.

Oats is considered the best grain for colts, but corn or barley may be used in the ration if properly balanced with nitrogenous feeds, such as linseed oil meal or wheat bran. Alfalfa and clover hay are rich in lime, the principal mineral component of the bones.

Britain's High Cliffs

The highest cliffs in the British isles, and perhaps even in Europe, are to be found on the little island of Foula, to the westward of the Shetland group. Here, facing the northwest, is a cliff known as the Kame which has a drop of no less than 1,722 feet. Curiously enough, on the east side of Foula the cliffs are very low, and in some places the land is almost level with the sea-shore.

FRANCES RUSH, Secretary

OBITUARY

Rose Ellen Paulin, daughter of Eli and Elizabeth Paulin, was born near Tippecanoe, in Marshall county, Ind., June 11, 1871. She grew to womanhood in the vicinity of Tippecanoe, and on December 31, 1891, she was united in marriage to Calvin V. Beltz. To this union were born three children. Ralph R. Beltz of Mentone, Mrs. Sarah E. Shirley of Silver Lake, Ind. and Lillie Mae, who died at the age of one and one-half years. Following the marriage they resided in Tippecanoe until the spring of 1919 when the family moved to Mentone where they have since resided.

She departed this life at her home in Mentone, on March 1, 1933, at the age of 61 years, 8 month and 18 days. She leaves her husband, the son Ralph, the daughter, Mrs. Sarah Shirley of Silver Lake, Ind., three grandchildren, Calvin, Charles and Eugene Shirley of Silver Lake, also a brother Harley Paulin of Mishawaka, Ind., two sisters, Mrs. Della Griffin of Fresno, Ohio, and Mrs. Ada Bowman of South Bend, Indiana.

The funeral services were held at the United Brethren Church in Bourbon, of which she was a member. The services were conducted by Rev. Pellett, the pastor, on March 4. Interment was at the Bethel cemetery southwest of Bourbon.

CARD OF THANKS

We wish to thank our neighbors and friends for the kindness, help and sympathy extended to us during the trying hours of our sad bereavement.

Calvin V. Beltz
Ralph R. Beltz
Sarah E. Shirley

BIRTHDAY DINNER

On last Sunday, March 19, Mrs. Fred Swick gave a dinner in honor of her husband and three daughters: Mrs. Julia Little, Mrs. Isabelle Johns and Miss Winifred Swick, all of whose birthdays occurred during the following week.

Those present were Mr. and Mrs. Boyce Underhill, of Plymouth, Mr. and Mrs. Charles Emmons and son Gaylord, of Warsaw, Mrs. Julia Nelson of Kokomo, Mrs. Don Nelson of Akron, Mr. John Swick, Phoebe Shoemaker, Margaret Mentzer, Earl Smalley, Mr. and Mrs. H. V. Johns and son David; and Mr. and Mrs. Adrian Little of Warren.

POULTRY

COLD WAVES FOUGHT
IN POULTRY HOUSES

Warm Buildings Help Birds
Fight Disease.

By H. P. Twitchell, Agricultural Engineer,
Ohio State University.—WNU Service.

Insulating the poultry flock from the low temperatures of winter helps in keeping the birds free from disease and in a good, vigorous condition.

One of the most economical methods of insulating the poultry house is to pack cornstalks around the outside walls. The fodder is best piled at least a foot thick and should be wired securely in place. It may be removed in the spring.

In order to make the insulation effective in the control of sudden temperature changes, the building should be made tight to prevent heat lost through leakage. Doors and windows are best made to fit as snugly as possible. All baffle work or muslin curtains used for ventilation may be replaced with sash. During mild weather, ventilation may be obtained by adjusting the windows.

If insulating board is used in guarding the flock against low temperatures, it may be protected from the chickens by painting it with a cement paste. This can be made by mixing together equal parts of cement and fine sifted sand. Add sour milk until a thick paint consistency is obtained. Do not use water in the mix. It is best to mix only small quantities of the paint at a time. It should be stirred constantly to keep the heavier particles from settling to the bottom. Apply two coats with a stiff brush. Twelve pounds of cement, 12 pounds of sand, and 1 gallon of sour milk will cover 80 square feet if two coats are applied.

Figuring Silage Price

Because it is impossible to move silage, it is frequently necessary for tenants to sell unused feed. Arriving at a fair price is difficult because the silage does not have a regular trading value. At Ohio State university dairy men have figured that a ton of silage has about one-third the feeding value of good mixed hay, depending on how grain is in the silage. It has been found that a ton of silage contains approximately the same amount of nutrients found in seven bushels of corn, or in 4½ bushels of corn and 600 pounds of corn stover of medium moisture content. In figuring the price of silage figure out the value of each of these comparative feeds. If the figures differ greatly, add them together and divide by three to get a fair valuation on the silage per ton.—Prairie Farmer.

The mill buys wheat, oats, corn.

Mr. and Mrs. M. J. Goshert of Fort Wayne spent Sunday with Mr. and Mrs. J. M. Preisch.

Mrs. Clyde Delano and daughter of Pierceton spent the week end with Mrs. Rose Morrison.

Donald VanGilder who is attending Indiana Dental School spent the week end with his mother, Mrs. Cora VanGilder.

Leroy Norris who is attending Purdue University spent the past week with his parents, Mr. and Mrs. John Norris.

Mrs. I. F. Snyder will entertain the Magazine Club at her home Wednesday evening with Mrs. VanGilder assisting.

Mrs. Golda Babcock left Sunday for Chicago where she will attend the Annual Mid West Beauty Show, to be held there.

Mr. and Mrs. Joshua Garwood and Mr. H. C. Thompson spent Sunday with Mr. and Mrs. Harold Henderson of Elkhart.

John Mathews who is attending Purdue University spent the past week with his parents, Mr. and Mrs. William Mathews.

James Mentzer who is attending Indiana University is spending a few days this week with his parents, Mr. and Mrs. M. O. Mentzer.

Miss Eileen Mollenhour who is attending Butler University spent the past week with her parents, Mr. and Mrs. C. O. Mollenhour.

Mr. and Mrs. Robert Hoover are the parents of an eight pound boy, born Saturday, April 1. The new arrival was named Franklin Perry.

Mr. and Mrs. Mace Sarber entertained the following guests at dinner Saturday evening, Mr. and Mrs. Elmer Sarber and family, Miss Mabel Sarber and Leroy Norris. The dinner was in honor of the birthdays of Mr. and Mrs. Elmer Sarber.

Mr. James Gill entertained the Beaver Dam teachers Friday evening to a lovely banquet. Those present were Mr. and Mrs. John McSherry, Mr. and Mrs. Fred Walgamuth, Mr. and Mrs. Don Baum, Nelson Cook, George Merkel, Theodosia Arnold and Lena Swick.

ANNOUNCEMENT

Mrs. L. C. Bowen announces the marriage of her daughter Louise Whetstone of Peru to Francis Hameuil son of Mr. and Mrs. Frank Hameuil of Peru, Indiana. The marriage took place at Goshen, September 7, 1932.

The mill buys wheat, oats, corn.

SILAGE FED FOR PRODUCING BEEF

Profits From Two Methods Found to Vary.

In a test recently completed at the Ohio experiment station, an acre of corn in the form of silage produced 752 pounds of gain on yearling steers. A similar acre fed as shelled corn produced only 372 pounds of gain in the form of beef.

The silage fed steers were given no grain. On a ration of 47.4 pounds of silage daily, two pounds of cottonseed meal and a small amount of mixed hay, they gained an average of two pounds a day for 174 days. The lot fed shelled corn, cottonseed meal, stover and mixed hay gained somewhat more, but the increased rate of gain was not important enough to equalize the low cost of gain on the silage fed steers.

The silage cattle made a profit of \$8.58 per head, including pork gains, and the grain fed cattle, \$3.46 per head.

An acre of corn fed in the form of silage returned a sum of \$71.65 an acre. In the form of shelled corn, the return was \$50.80 per acre.

As silage, an acre of corn furnished enough feed to last one steer 375 days. When fed as shelled corn, one crop acre carried a steer only 166 days. The field of corn used yielded 48 bushels per acre as grain and 8.8 tons per acre as silage.

Dressing percentages were 59.6 on the silage fed steers and 60.6 on the grain fed cattle. Packers said there was little difference in the quality and condition of the two lots in the beef.

Prof. Paul Gerlaugh of the Ohio station points out that profits from the two methods of feeding will vary from year to year according to market prices, but he believes that any method of feeding which produces the results obtained by the all silage test is worthy of consideration.

Work-Stock Efficiency Should Be Increased

The work-stock population on farms is on only a half-rate replacement basis. The average age of work animals is higher than it was a few years ago. The significance of this situation is not that horses and mules are going to disappear from all farms, but that horse farmers must make more efficient use of their work animals.

There is no good reason for keeping in the harness a horse that is unable for one reason or another to do an honest day's work. Is the animal inherently unfitted for the job? Get rid of it. Is it merely a case of neglected upkeep—failure to feed the animal properly, or to take care of his ailments? Mend your ways of handling the beasts. Is it a case of the two or three-horse team being inadequate? Try multiple hitchings.

Famous American Ships

The clipper ships were ships specially built and rigged for fast sailing. The clipper, as compared with the ordinary sailing vessel, was longer and generally of less beam in proportion to length. They were very sharp at the bows, which were hollowed more or less below the water line, and gracefully lined away toward the stern, which was almost always elliptical. The name clipper was first borne by the Baltimore clippers, famous as privateers in the early wars of the United States.

Officers Banquet Their Employees

Board of Directors of Northern Indiana Cooperative As- sociation Entertain Employees

On Tuesday night of last week the Directors of the Northern Indiana Cooperative Association entertained the employees of the mill with a chicken dinner at the Lake Trail Cafe.

After the feed they retired to the Mentone High School Building where a business session was held. The achievements of the mill were reviewed, and all the members of the party made suggestions for the betterment of the business.

members of the party made suggestions for the betterment of the business.

Last week ten cars of merchandise were delivered to the mill in addition to several truck loads. More business is being done this spring than ever before. It is only through the handling and buying of a large quantity of feed stuffs that the mill is able to retail their products at such a low cost.

Always the thought of profit has been a secondary factor. The first consideration is the distribution of merchandise that will please and profit our customers. This has been done efficiently. There is a distribution of labor so that there is never an excuse for an employee to be out of work. There is always something to do. Trucks, trailers and automobiles stand in front of the mill at all times of day. The dreams of all of the promoters of the enterprise have been realized.

The fine reception the mill has had on the part of the poultrymen of this vicinity has made it necessary that additional room be had. Workmen are now busy on an addition of forty feet on the south end of the mill. As soon as this is complete a new building forty by seventy two feet will take its place on the south end of the lot. This will be used for building material.

There has been talk of handling building material for some time,

and it is only due to the demand that this successful farmer's organization handle a larger part of the farmers needs that this is being done. This will make a complete line of feed, supplies, coal and building material.

The mill appreciates the patronage of its customers, and always welcomes new ones. They appreciate also the honest efforts of their employees. They have all worked together, the customers and the employees, to make the organization what it is today. They only hope to be more useful to the community. This organization kept \$80,000.00 worth of business in Mentone last year. This year it will be over \$100,000.00. Certainly this is an asset to any community. It must be born in mind that all profits of the enterprise are distributed to one hundred seventy five farmers who own stock in the mill. Although all of the stock is issued, arrangements can be made at the mill for the purchase of stock from any stockholders that care to sell a part of their stock.

Raise More Horses for Efficient Farm Power

Will consumption of milk and bread and meat stand still?

The time is not far distant when it will, declares Wayne Dinsmore, secretary of the Horse Association of America, in a recently issued statement. "Childless Marriages—Fewer Months for the Farmer to Feed."

Farmers must realize, Mr. Dinsmore says, that a wise alternative is to raise and feed some live stock not intended for human consumption but for serving them in their farm operations as efficient, cheaply kept farm power—good, sound horses and mules. In other words, Used in big teams they are the best, most efficient form of power for the farm; and, kept on pasture as they should be, they cause the owner almost no cash expense. Anyone desiring a copy of the statement in full may have it by writing to Wayne Dinsmore, secretary, Horse Association of America, Union Stock Yards, Chicago.

An Honest Mind

There needs no truth of servants, or pump, or equipage, to make good our passage to heaven; but the graces of an honest mind will serve us upon the way, and make us happy at our journey's end. —Seneca.

MOLLENHOUR BADLY HURT

George Mollenhour, aged 49, of Mentone, suffered a badly fractured skull and the loss of his left eye at about noon Friday of last week in an accident which occurred at the Mollenhour Lumber company mill at this place. Mr. Mollenhour, partner in the firm, was sawing out single trees, when a block of wood flew from the machine and struck him on the head.

The injured man was rushed to the Emergency hospital in Warsaw where his condition was found to be critical. The skull was so badly fractured that tissue seeped from the brain. A deep gash was cut above the left eyebrow and extended downward on each side of the eye. The eyeball was destroyed and the eye was removed at the hospital.

Mr. Mollenhour is a prominent resident of Mentone.

Pioneer Woman Flyer

The first woman who piloted an airplane in America was Dr. Bessie Balche, who died April 11, 1932. Her first flight was made September 16, 1910.

\$115,000 Per Capita

The city of Westminster, near London, England, contains four square miles valued at \$15,000,000,000, equal to \$115,000 per head of population.

Swine Sanitation and Correct Feed for Pork

Swine sanitation and feeding balanced rations to sows, pigs and fattening hogs took six weeks off the pork production period for 458 Illinois farmers this year, states E. T. Robbins, University of Illinois. The earlier market is usually the better one and the difference in price six weeks earlier may make the difference in profit and loss on hogs.

The co-operators used corn, legume pasture, rape, alfalfa hay, skim milk, soy beans, tankage, oil meal, limestone, bone meal and salt in compounding their rations. With their sanitation and good rations farmers were able to produce 200-pound hogs in six months or less time. Many of the pigs went on the market in mid-September to hit the peak of good prices.

PSI IOTA XI

The April party of Psi Iota Xi was held at the Mentzer home with Rosalind Mentzer and Lena Eaton as hostesses. Prizes were awarded to Pauline Riner and Thais Greulach. Those present were Bernice Bowen, Milli e and Frances Clark, Lena Eaton, Thais Greulach, Helen Jontz, Annabel Rosalind and Margaret Mentzer, Elizabeth Myers, Edna and Nellie Reed, Pauline Riner, Verneette Snyder and Winifred Swick.

Of Interest To Fire Fighters

A. H. Friesner our new Fire Chief desires the public and non-members to understand the conditions of the Insurance protection that is carried by the Town of Mentone on firemen.

This insurance is a group policy carried on the seventeen members of the department only. A non-member injured as a volunteer is not protected except under the following conditions. In an emergency, when there is a shortage of regular members of the department, the Chief may appoint extra help, for the occasion, and the insurance policy will cover the extra firemen for the period of the one fire only.

Minors are positively not allowed to help, ride on, or operate a fire truck.

Mr. Friesner states that the department is very anxious to have the full co-operation of the public as well as the members of the squad. The best service and protection of property can only be had with co-operation and system.

EXHIBIT AT THE SCHOOL HOUSE

An exhibit was held at the School House, Saturday, April 15, and it was very well attended. The grade teachers had the walls of their rooms lined with work that had been done during the year. The members of the sewing classes were very attractive in the dresses they had recently finished; the remainder of their work was displayed in the Sewing Room. The display in the Science room was neat and interesting. The Art room contained drawings and craft work of the first eight grades.

WORLD WAR BY "YARNS" LIEUT. FRANK E. HAGAN

The First American Killed

The first American citizen killed in the World war lost his life on February 27, 1915, more than two years before this country formally entered the conflict. He was Edward Mandell Stone, a native of Chicago, who was twenty-seven years old at the time of his death.

Stone's sacrifice is remembered. Each year his death is the inspiration for two separate ceremonies. The date of his passing, February 27, has been designated as the time when the Association of American Volunteers With the French Army, 1914-1917, each year reanimates the Eternal Flame on the tomb of France's Unknown Soldier at the Arc de Triomphe.

On Memorial day every year the American Legion directs a rite at the grave of Stone in the cemetery of Romilly-sur-Seine. One of the interesting features of this latter ceremony is that the French woman who, as volunteer nurse, wrote the last letter for Stone and was beside him when he died, is a participant. She is now schoolmistress of the school in La Villeneuve-au-Châtelot.

Stone lived in Paris and was in the American diplomatic service when the World war began. He enlisted in the French Foreign Legion, August 24, 1914, with the first group of American citizens.

Less than six months later—on February 15, 1915, while serving as a private in Battalion B, Second Regiment of the Foreign Legion, he was wounded so severely he died 12 days later.

Stone was in the trenches near Craonelle in the Aisne when wounded. He "went west" in the military hospital at Romilly-sur-Seine. The first American citizen to die received, posthumously, both the Croix de Guerre and Medaille Militaire.

DEATH COMES SUDDENLY

Prominent Farmer and Veter-
inarian of Near Mentone
Dies at Tippecanoe.

Hiram Horn, aged 86, veterinarian and farmer, who lived nearly all his life on a farm southwest of Mentone, died suddenly at 8 p. m. Tuesday, April 11th. Death occurred at the home of his daughter, Mrs. Eva Moore, at Tippecanoe.

Mr. Horn retired for the night at about 8 o'clock. Shortly after going to his room his daughter heard him fall. She went to him at once and found him stretched on his bed dead. Mr. Horn appeared to be in his usual health and previous to his retiring had made no complaint of feeling ill. It is believed that his demise resulted from a heart attack, as he had been a sufferer of heart trouble for some time.

The deceased was born in Canton, O. At the age of five he traveled with his parents, brothers and sisters in a covered wagon to the farm near Mentone in Marshall county, where the remainder of his life was spent. In 1869 he was united in marriage to Elizabeth Grass and following her death two years ago he has resided with his children. He was a member of the Methodist church of Tippecanoe, was a trustee of the church and for 25 years served as superintendent of the Sunday school. He was also a member of the Odd Fellows lodge at Tippecanoe. He was the oldest resident of Tippecanoe township, Marshall county.

Surviving him are the following children: Mrs. Moore, at whose home

he died; Mrs. C. O. VanGundy, of Elkhart; Mrs. Henry Meredith, of Mentone; Isaac Horn, of Palestine; Mrs. John Morical, of Bourbon; Amos A. Horn, of Elkhart, and Mrs. W. S. Coplen, of Warsaw; 22 grandchildren and 16 great grandchildren. There are also two brothers, Samuel Horn, of Rochester, and Adam Horn, of Birmingham, Ala., who are the last survivors of a family of 12 children. One son of Mr. Horn, Jacob died in infancy, and a daughter, Clara, expired at the age of 18 years.

The funeral was held on Friday afternoon from the Tippecanoe Methodist church with Rev. Bergess, pastor of the church officiating. Burial was made in the Mentone cemetery.

Allen Long Dies at His Home in Mentone

Allen Long, aged 67 years and 4 months, passed away at 9:15 a. m. Tuesday, April 11th, at his home in Mentone. He had been ill since April of last year and had been confined to his bed since last November. Death was caused by a complication of diseases.

Mr. Long was born in Fulton Co., April 7, 1866, a son of Jacob and Amanda Dunlap Long, deceased. Mr. Long followed the occupation of a telephone lineman. He was a member of the Bethlehem Baptist church and of the Gleaner society.

His widow, Martha Cook Long, to whom he was married on June 6th, 1893, survives along with two children, Harry Long, of Michigan City, and Mrs. Owen Gaines, of Whitley county; two grandchildren, and three brothers. The brothers are: John D. Long, of Tiosa, Ind., Andrew Long, of Owensboro, Ky., and Alonzo Long, of near Rochester.

The funeral services were held Thursday afternoon at 2:30 o'clock at the Mentone Baptist church. Burial was made in the Sycamore cemetery.

Light Liming Serves Indiana Farmers Well

By S. B. Pershing, Tippecanoe Co.
Agricultural Agent.

A mow full of good hay for winter, a deep growth of pasture for the whole summer, and the soil getting higher in fertility is a series of conditions that can come into existence only through certain stands of clovers. The thing that prevents all this from happening on the farms of Indiana is that clover stands have not been certain on average soil without heavy expenditure of cash and labor for two tons of lime per acre. This heavy lime application is a good investment, however, it is practically impossible under present economic conditions. But now that the practice of using a very small amount of lime directly with the clover seed has been found to give very certain stands there is definite possibility of every farm having the mow full of hay, fields of deep pasture and increasing fertility. In Tippecanoe county this method of liming, commonly known as "light liming" has been used on more than a hundred farms in each of the last two years, with very general success in getting sure and thick clover stands, particularly on medium acid soil. As a result of these good clover stands on the farms that used the light lime method many have inquired as to just how these men made the light applications of lime with their clover seed.

Briefly, the equipment and materials used are a grain drill with fertilizer and grass seed attachment, all in good state of repair, and which is so constructed that the grass seed can be entered into the main drill hose; medium finely ground limestone, probably 20-40 mesh, that is dry and contains no particles large enough to cause damage to the feed apparatus of the drill.

The clover seed used should be inoculated if the field has not had the particular clover on in recent years and the inoculation should be applied immediately preceding the sowing. These materials and equipment used with a lot of good judgment should make possible a good stand of clover.

The actual operation of planting is as follows: the lime is placed in the fertilizer attachment which should be regulated to insure sowing of at least 300 pounds per acre. The exact setting of the drill will vary with the degree of fineness and dryness of the lime. After the seed is inoculated it is put into the grass seed attachment with the grass seed hose entered into the main hose of the drill so that the lime and seed fall together into the drill furrow. The drill should not be set so as to put the seed in too deep-

ly. The links which drag behind each drill disc should be in place to give a slight covering and to level down the disc furrows when driving. If these are fairly well leveled by the drag chains there is less danger of a heavy rain washing them full and mudding under the small clover plants.

This method of seeding can be used on good condition oats ground or wheat. Some of the men prefer driving crossways or at an angle with the wheat rows when drilling on wheat. The general opinion among the men who have followed this practice on their wheat is that the drill-discing is beneficial to the wheat even though it appears to be cutting it some.

Seed has been sown this way on practically all dates in the spring and opinions vary as to exactly the best time, but at least the ground should be in good condition for working, which is much later than customary clover sowing dates. Sowing during the month of April avoids danger of frost.

The benefit of the small amount of lime seems to depend upon the fact that it is concentrated right around the young seedlings and gives them a good start both in their growth and in their inoculation. Many of the men feel that additional certainty of stand can be gotten by using a mixture of clovers, using considerable sweet clover, which cheapens the cost of seed almost enough to pay for the added cost of the lime.

It is the general opinion in Tippecanoe county that this new liming method has solved a new "H. C. L." about which we have been worried during recent years, namely, the High Cost of Legumes, for the expensive risk of throwing clover seed on the ground without a certainty of stand has been eliminated with very small outlay of cash and with very little labor tied up in this "light liming" process. No One Knows

"We all say 'merry as a grig,' but what is a grig?" has been asked. In some districts a lively young eel is called a grig; in others, a grasshopper. It is said that the phrase originated with traveling tumblers: "as merry as a dancing Greek."—London Tit-Bits.

OBITUARY

Wallace Hibschan, son of Jacob and Mary Hibschan, was born near Sevastopol, Indiana, October 15, 1863. He died March 31, 1933, aged 69 yrs. 5 months and 15 days. He married Altie V. Kessler February 6, 1892. A tie preceded him in death by 16 months, 15 days and 15 minutes.

Wallace seemed never to have recovered from the shock of her death.

There were two children born to Wallace and Altie. Raymond of Syracuse, Indiana, and Mrs Bert Holloway, of Mentone. Three grandchildren, Clayton Holloway, and Devon and Robert Hibschan.

Lions Hold First Luncheon

The first luncheon of the Mentone Lion's Club was held last Wednesday evening at the Lake Trail Cafe. Forty-four Lions, representing clubs of Mishawaka, Bourbon and Mentone attended. The meeting was in charge of Lion C. R. Graham, president of the Bourbon club. Speakers of the evening were Lion Wayne Eikenberry, of Bourbon and Distric Deputy Governor French, of Mishawaka.

Misfortune

Although a friend may remain faithful in misfortune, yet none but the very best and truest will remain faithful to us after our errors and our sins.—Farrar.

Will Visit Mentone Lodge

The Rebekah lodge met in regular session Tuesday evening with 25 members present. About 30 members plan to drive to Mentone, Wednesday, April 19, to attend district meeting which has been called for 2 p. m. sharp. Members going will meet at I. O. O. F. hall between 12:30 and 1 o'clock. Nettie Philpott, the district president, heard 15 give the unwritten work. The Odd Fellows and Rebekahs will hold a joint meeting the last of April. Following the business meeting, a short program was enjoyed by the Rebekahs and guests. Refreshments were served in the dining room in a very clever manner.—Warsaw Times.

Athenian Horse Races

The first horse race was run in 693 B. C. in the twenty-third Olympiad at Athens. The distance was four miles. Eight years later the first harness horse competition took place in the twenty-fifth Olympiad, when the horses drew chariots.

Others

To do anything to cause others do it, and not because the thing is good, or kind, or honest in its own right, is to resign all moral control and captivity upon yourself and go, post haste, to the devil with the greatest number.—R. L. Stevenson.

Old Romans Short Lived

In Rome, under the emperors, according to a recent study, the average individual lived only 18 years.

J. M. SHAFFER PASSES AWAY

James M. Shaffer, aged 81 years, a retired farmer, passed away at the home of his son, Noble Shaffer, northwest of Mentone, on Tuesday afternoon, April 11th. The deceased had been ailing for over a year and had been bedfast for the last month. Death was caused by the infirmities of advanced age.

Mr. Shaffer was born in Leesburg, but resided practically his entire life in the vicinity of Mentone. He was a member of the Dunkard church.

He is survived by two sons, Noble, with whom he made his home and John, who resides east of Tippecanoe and two daughters, Mrs. Ella Burket and Mrs. William Mahoney, both of whom reside west of Mentone.

The body was taken to the H. V. Johns Funeral Home in Mentone, where friends were permitted to view the remains until Thursday noon.

Funeral services were held on Thursday afternoon at 2 p. m. from the Mentone Church of Christ, and burial was made in Mentone cemetery.

Medical Society Entertained

Dr. and Mrs. M. G. Yocom, of this place entertained the members of the Kosciusko County Medical Society, Tuesday evening, April 11th. At 6:30 a sumptuous steak dinner was served to the assembled guests. Following the banquet, Dr. Yocom gave a short talk on his forty years as a doctor in this county. Short responses were given by each one present. The guests were Drs. J. R. Baum, G. W. Anglin, O. R. Richer, W. B. Siders, R. E. Phillips, C. N. Howard, S. C. Murphy, C. C. DuBois, of Warsaw; C. R. Hoy and F. O. Clark, of Syracuse; T. J. Clutter, of Mentone; H. F. Steele, of Claypool; C. E. Thomas and P. G. Fernier, of Leesburg.

MASONS VISIT MENTONE

Masons of the Blue lodge of the Masonic order of Warsaw, motored to Mentone Monday evening, April 10th, and conferred the Entered Apprentice degree on Walter Kindy, coach of the Beaver Dam basketball team. Refreshments were served at the close of the work. Those attending from Warsaw were: Al. Sloane, Dr. Fred Olds, Matt Murtaugh, C. Eder, John Meredith, Herschel Lehman, E. M. Lufner and Maurice DePoy.

MENTONE-WARSZAW ROAD TO BE WIDENED AND TO ELIMINATE BACK-BONE

The Mentone-Warsaw highway, state road No. 25, pavement will probably be widened two to four feet, a foot or two feet wider on each side and made to enter Warsaw over state road No. 15, from south of the city.

State surveyors have been marking the new route to eliminate curves, to provide a right-of-way 70 feet wide through the country and to avoid the "Devil's Backbone" curves by going straight east from a point south of the Backbone curves to join state road 15 about a mile and one half south of Warsaw. Warsaw Times.

It's the Upkeep

Men buy fewer luxuries than women, says a shopping expert. She evidently doesn't realize that men marry luxuries instead of buying them.

Weight and Death

The public health service says that the weight of the human body before death and after death is practically the same. The difference in weight is imperceptible.

Gas Engine Improvement

The power of the average automobile engine has been doubled with only a 6 per cent increase in engine displacement, and a 25 per cent increase in the speed, was accomplished in one decade by various improvements made in the design and construction.

Consumers' Demand for Lamb Meat Increasing

One-third of all of the lamb which the nation produces is consumed in greater New York. The drop in price which has occurred during the past six months has put lamb on a price basis with beef and pork. As a result, many people throughout the central and western part of the United States have been purchasing it.

Needless to say a liberal percentage of these folks have become lamb boosters. This should result in a fairly reliable consumers' demand for lamb meat in the future, and providing the price does not become unreasonably high, it would seem as though there would be a dependable outlet.

Crossbreeding

It is true that crossbreeding has decided dangers and disadvantages. Principal among them is the tendency to save a good looking crossbred bull calf for breeding purposes. Such an individual will not breed true and will be a very inferior sire. If it is desired to produce a grade beef grading herd, the crossbred heifers should be bred to a good pure bred beef sire of the same breed as the original cross. This system is actually crossbreeding and then grading. It works very well.
